

## miniLA subversions

The miniLA was originally developed only for 100 MHz input clock. Due to a problems with obtaining a correct crystal oscillator, 3 subversions of miniLA for standard crystal speeds were made.

Subversion were made in such a way that no modification is necessary in the control software. The only exception is at frequencies above 20 Mhz (80 MHz can not be integrally divided by 50 MHz)

### Timebase selector

Table below shows sampling frequencies for versions with different crystal speeds.

<b>Timebase selector</b>		<b>Output frequency 100MHz version</b>	<b>Output frequency 80MHz version</b>	<b>Output frequency 40MHz version</b>	<b>Output frequency 20MHz version</b>
