Easy-to-Use

No configuration is necessary for out-of-box RF operation. Simply feed data into one module, then the data is sent out the other end of a long range wireless link.

If more advanced functionality is needed, the module supports an extensive set of AT and binary commands.

High performance and low cost
made the 9XTend OEM RF Module
"Product of the Year" in 2004.

Award was given by eeProductCenter
(of the EETimes Network).

Highlights

Price-to-Performance Value.

Due to innovations stamped in its design, the 9XTend yields 2-8x the range of competing modules. This allows OEMs & integrators to cover more ground with fewer devices.

Additionally, 9XTend Modules are easy-to-use and therefore greatly reduce the cost of data system development.

256-bit AES Encryption.

The 9XTend provides security through data encryption that is not available on competing modules. The Advanced Encryption Standard (AES) is used with a 256-bit key.

No time penalty is incurred during encryption or decryption.

Receiver Sensitivity.

MaxStream modules 'hear' what others cannot; therefore supplying greater range and reliability in wireless links.

9XTend Modules outperform higher costing modems due in large part to range gained through superior RX sensitivity.

Low Power Consumption.

For power-sensitive applications, several sleep modes are available. The Shutdown pin allows for current consumption that reaches below 1 µA.

FCC (U.S.A.) & IC (Canada) Approved.
