

# Tips and Tricks to Speed LabVIEW Development

*Useful Nuggets to Save You Time*

Darren Nattinger, Staff Software Engineer, LabVIEW R&D  
Casey Weltzin, ELP Engineer, Applications Engineering

# Agenda

- 15 Tips and Tricks for NI LabVIEW Development
  - **Beginner:** Simple tricks to save time
  - **Intermediate:** LabVIEW tips you probably didn't know about
  - **Advanced:** Useful nuggets to put you ahead of the game
- New features in LabVIEW 8.5

# Automatically Select the Right Tool

- Avoid manually switching among many tools

Operate Value Tool

Position/Size/Select Tool

Edit Text Tool

Connect Wire Tool

Auto Tool

Darren says: “Come on, just try it!”

# Switch Terminal Wires Easily

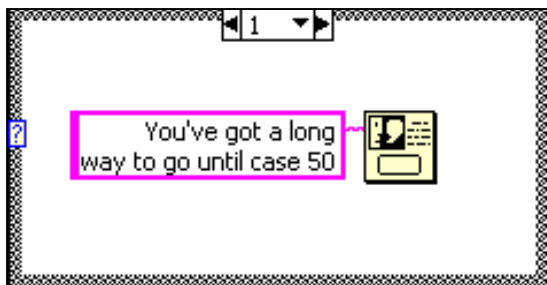

Hold Down Ctrl  
and Left-Click on Input Terminal

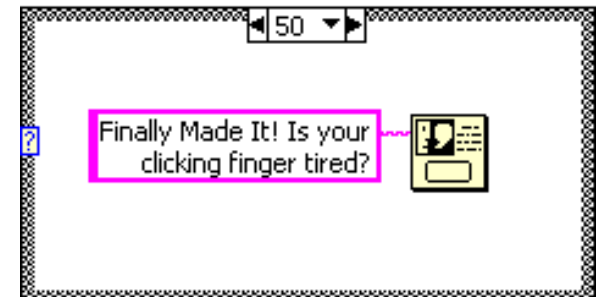

Note: This works only for functions with two inputs when both inputs have already been wired.

# Easily Scroll Through Structures

- You can use Ctrl + Mouse Scroll to scroll through:
  - Case Structures
  - Event Structures
  - Stacked Sequence Structures
  - Diagram Disable Structures

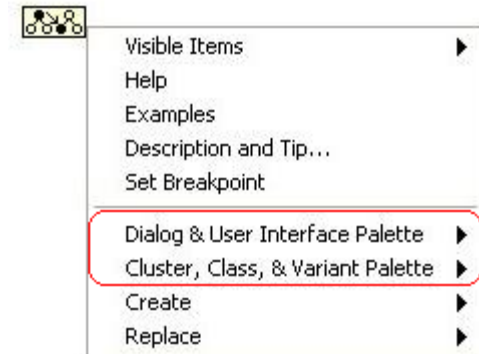

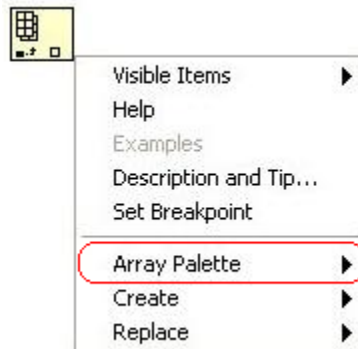

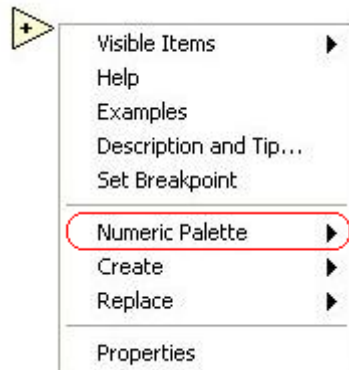

Ctrl + Mouse Scroll Wheel

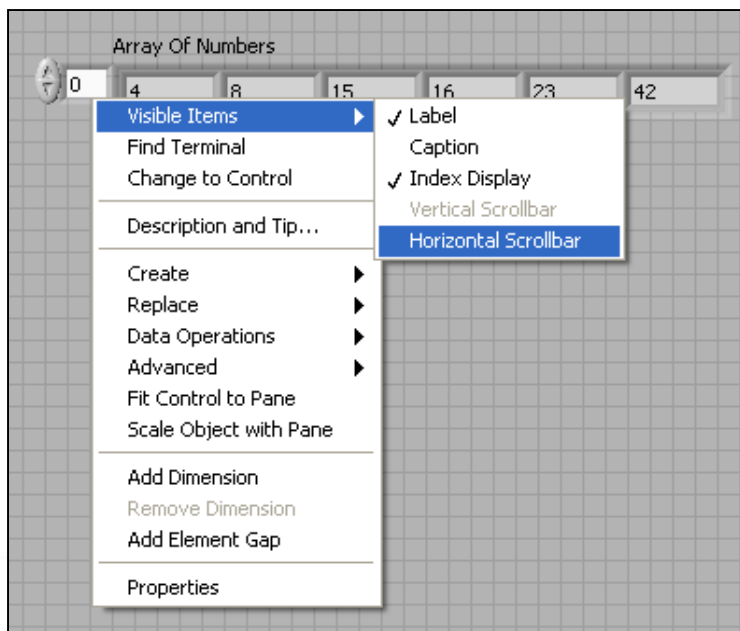

# Quickly Find the Right Palette

- Right-click on a block diagram object for a palette shortcut

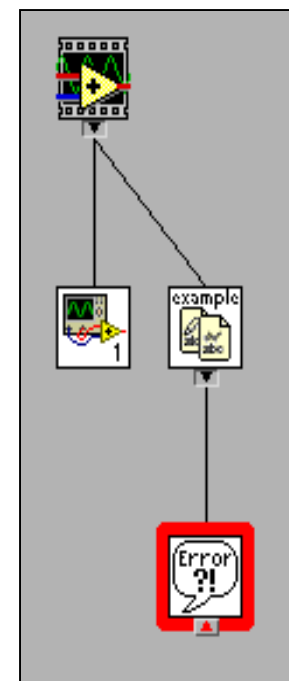

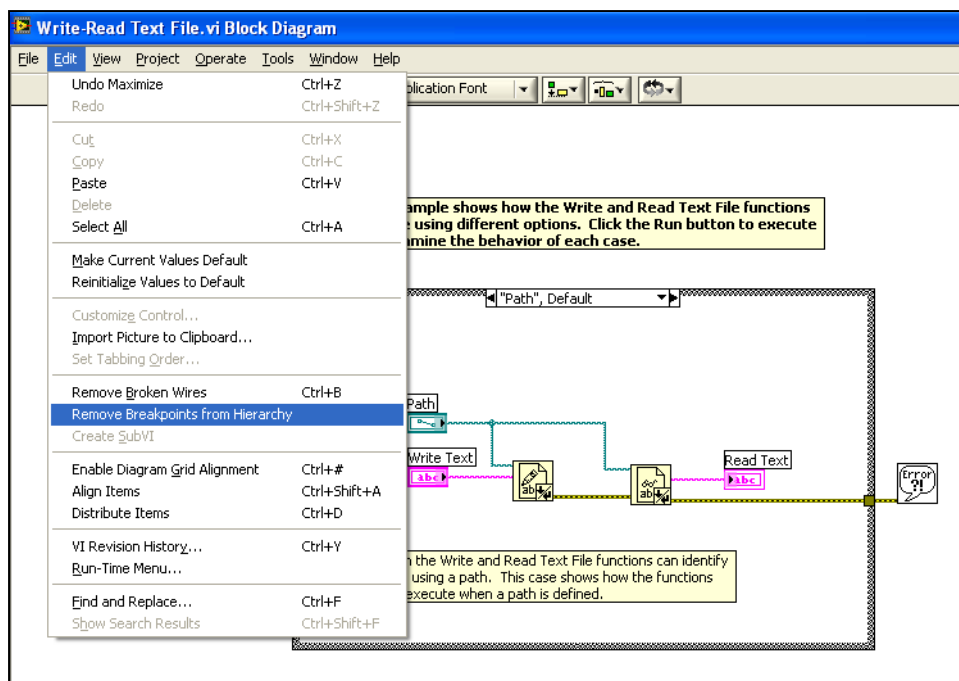

# Easily Navigate Arrays

- Right-click on an array and select **Visible Items >> Horizontal Scrollbar** (or **Visible Items >> Vertical Scrollbar**)
- To view last element, select **Advanced >> Show Last Element**
- Both horizontal and vertical scrollbars available (depending on array dimensions)

# Removing Many Breakpoints

- Select **Edit >> Remove Breakpoints from Hierarchy**

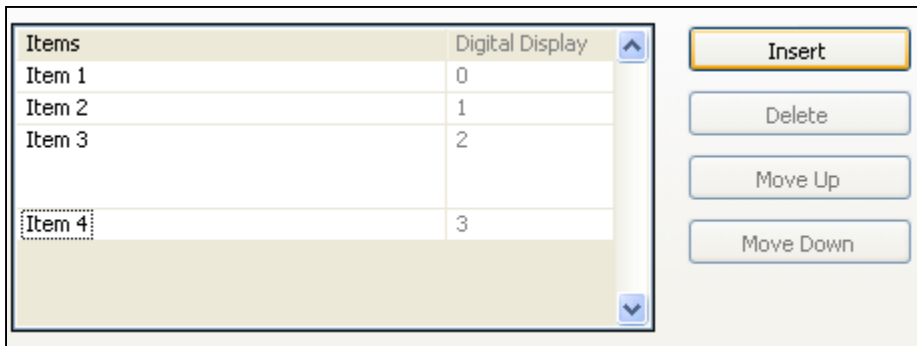

Note: Only available in LabVIEW 8.20 and later.

# Easily Add Enumeration Items

- Press Ctrl while over an Enum to use the Text Tool
- Use Shift + Enter to repeatedly add items

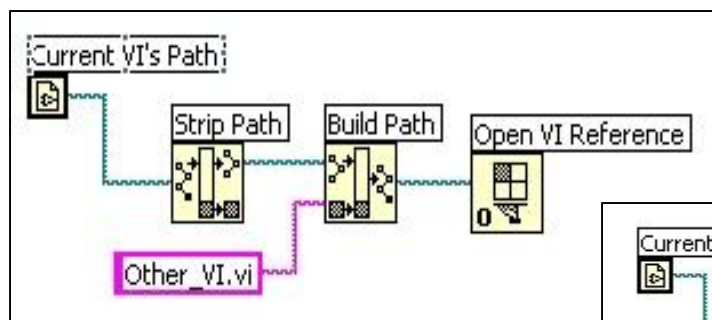

Shift + Enter

# Quickly Open a VI Reference

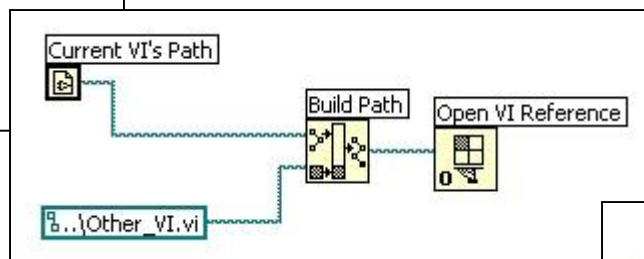

(next to current VI on disk)

- LabVIEW automatically looks in the current directory
- Right-click on VI and select Call Setup to call it dynamically

Good

Better

Call Setup

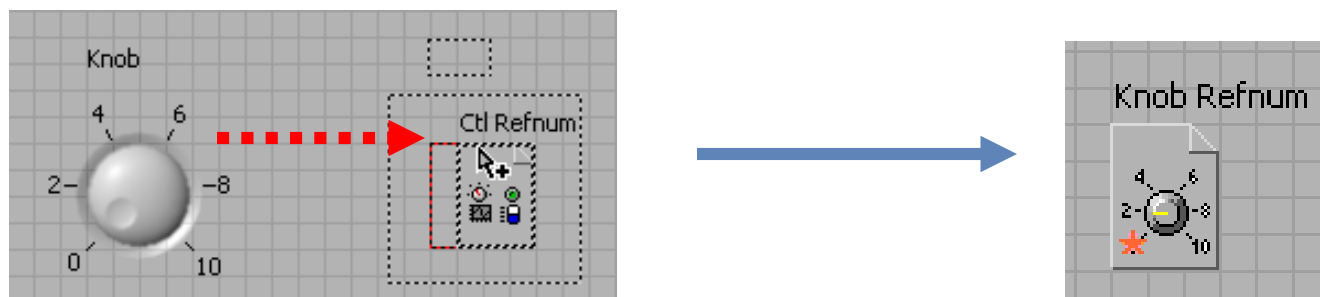

Best

Note: This method requires a **path** constant.

# Automatically Create Control References

- Simply drag a control into a Control Refnum
- Automatically creates a class-specific, type-specific reference

Note: To keep the original control, use **Ctrl-Drag** instead.

# Drag and Drop to Save Time

- Drag an image into your VI icon
- Select a file and drag into a path constant
- Take a URL from Internet Explorer and drag into a string constant
- Drag items from disk or Project Explorer into a LabVIEW block diagram

<http://www.ni.com/>

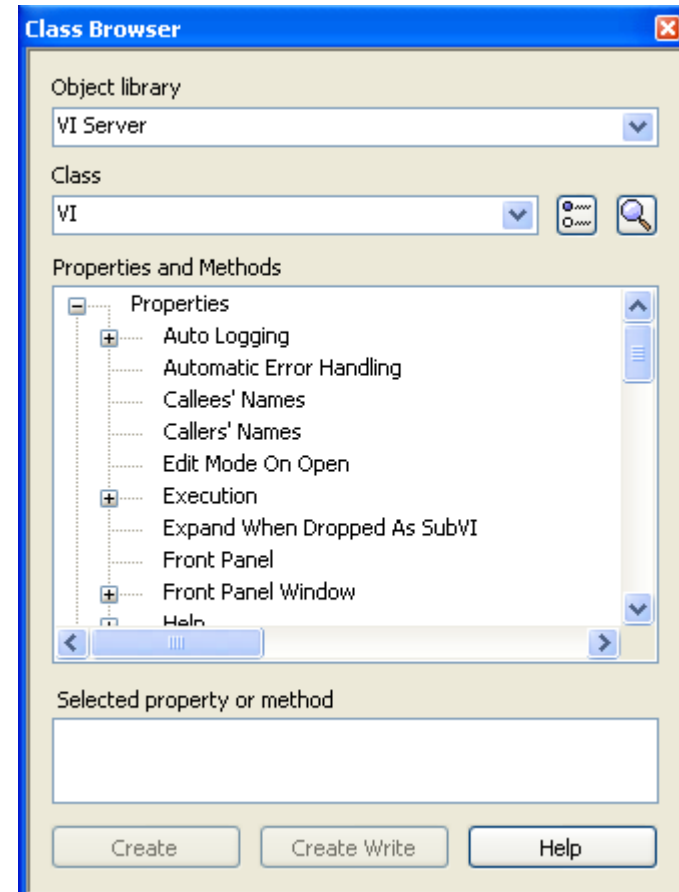

<http://www.ni.com/>

# Quickly Browse Properties and Methods

- **View >> Class Browser**
- Shortcut: Ctrl + Shift + B
- Drag a property or method directly into your VI

# Perform Advanced File I/O Tasks

- New File I/O VIs in LabVIEW 8.20

Recursive File List

Check If File or Folder Exists

Get File Extension

Compare Two Paths

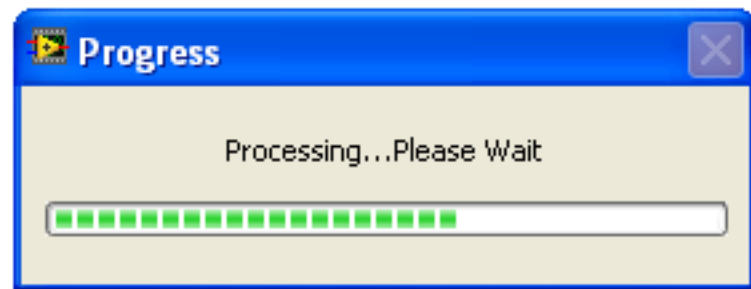

Generate Temporary File Path

MD5 Checksum File

# Implement a For Loop Progress Bar

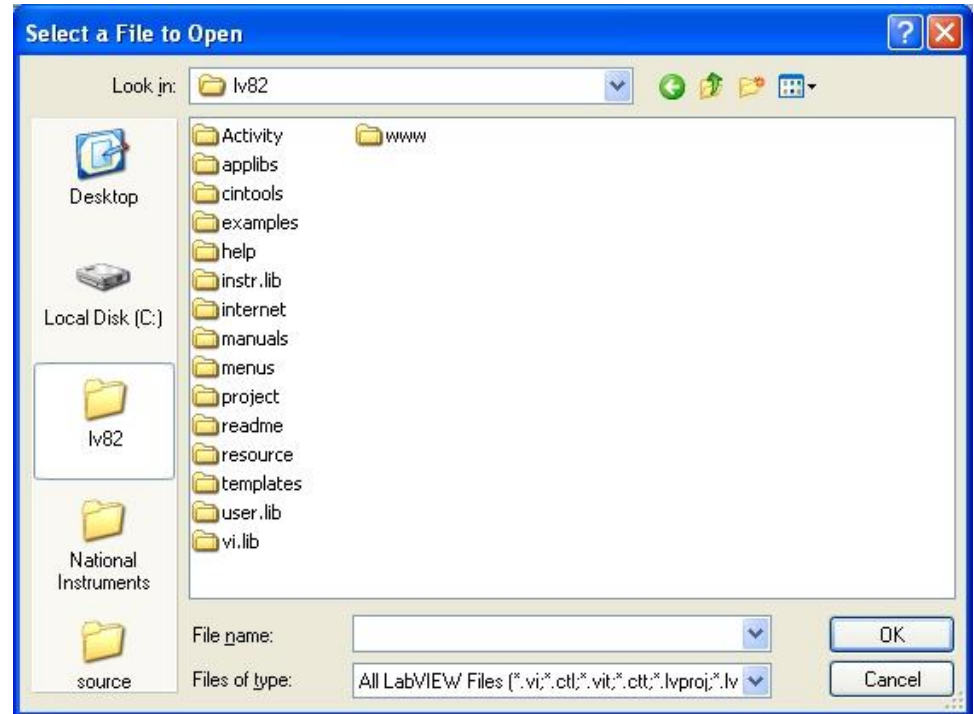

- Place Progress Bar VI inside a For Loop
- Opens automatically after a specified amount of time
- Download sample code from [ni.com/forums](http://ni.com/forums) (search for “For Loop Progress Bar”)

# Change the Windows File Dialog

(to contain recently used folders in LabVIEW)

- Add LabVIEW.ini token  
“MRUFolders = TRUE”
- Maintain easy access to the last 5 directories used in LabVIEW

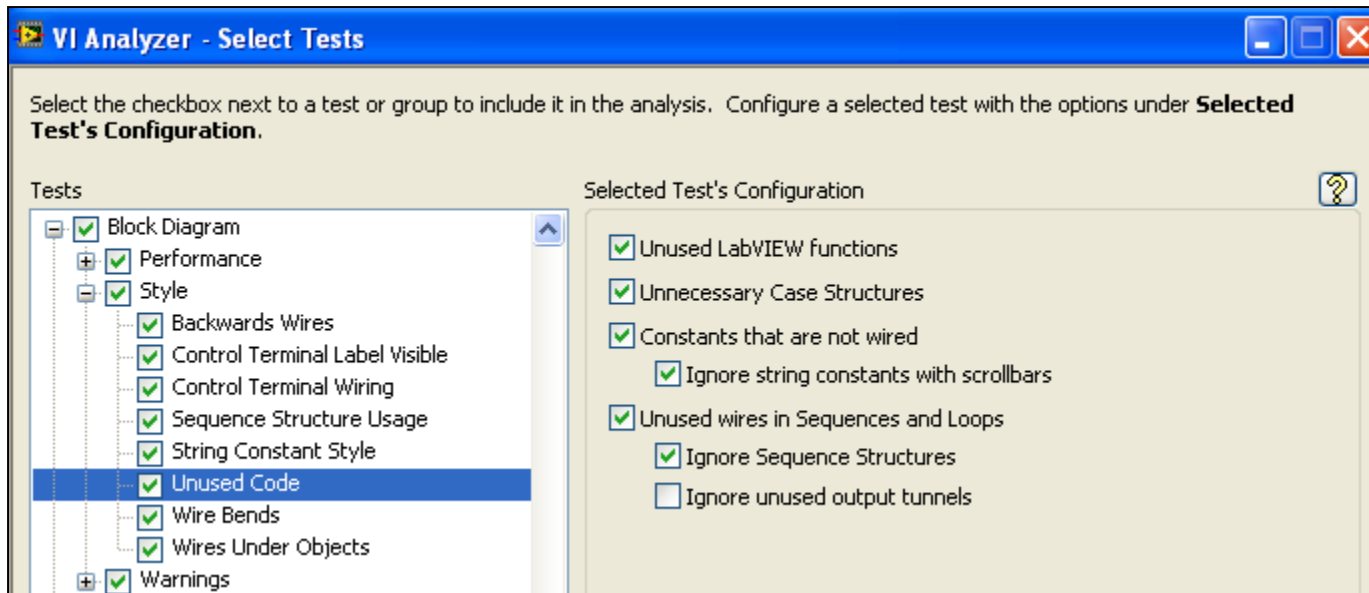

Note 1: Only available in LabVIEW 8.20 and later.

Note 2: Overrides TweakUI settings.

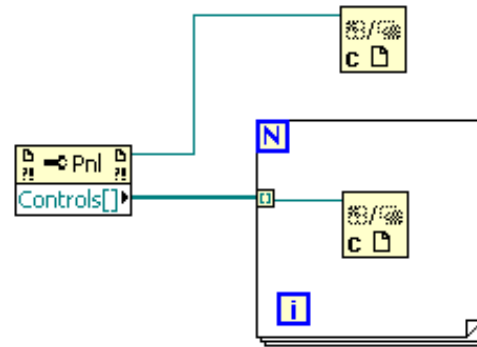

# Automatically Analyze Your VIs

- **Tools >> VI Analyzer >> Analyze VIs**
  - Check performance, style, UI, documentation, and more
  - Save VI Analyzer settings for later use

# LabVIEW 8.5 - Close Arrays of References

- In LabVIEW 8.20, you must close multiple references in a For Loop

**LabVIEW 8.20**

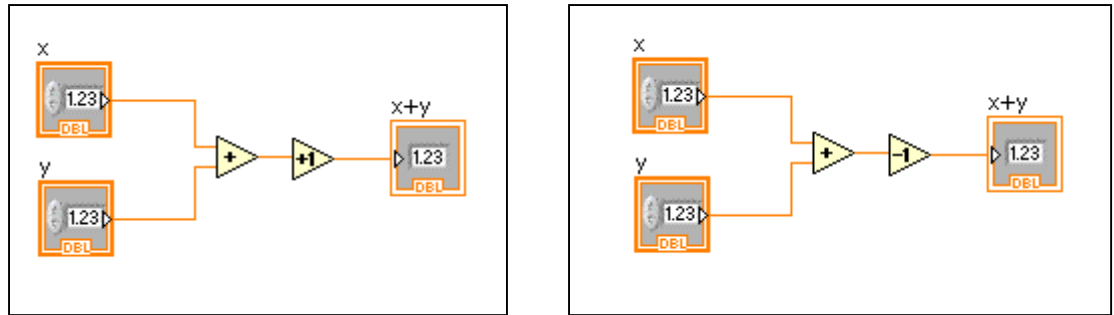

- In LabVIEW 8.5, Close Reference now accepts a 1D array of references

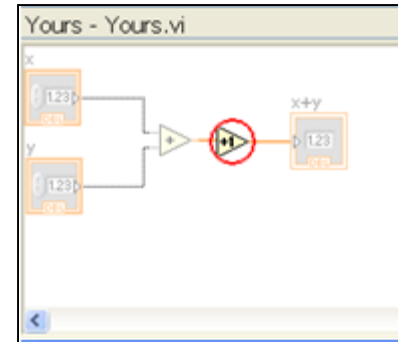

**LabVIEW 8.5**

# LabVIEW 8.5 - Merge Two VIs

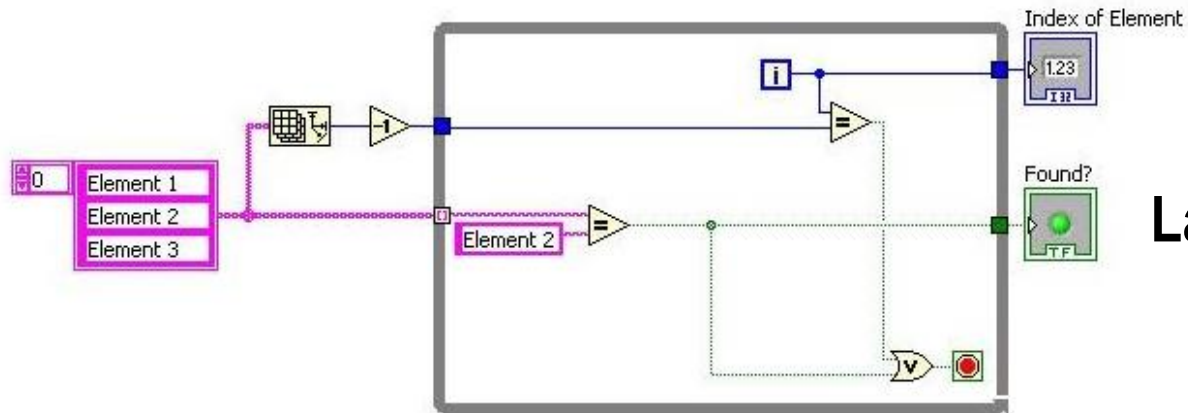

- Track changes made to a base VI  
(**Tools >> Merge VIs**)

- Interactively decide which changes to incorporate

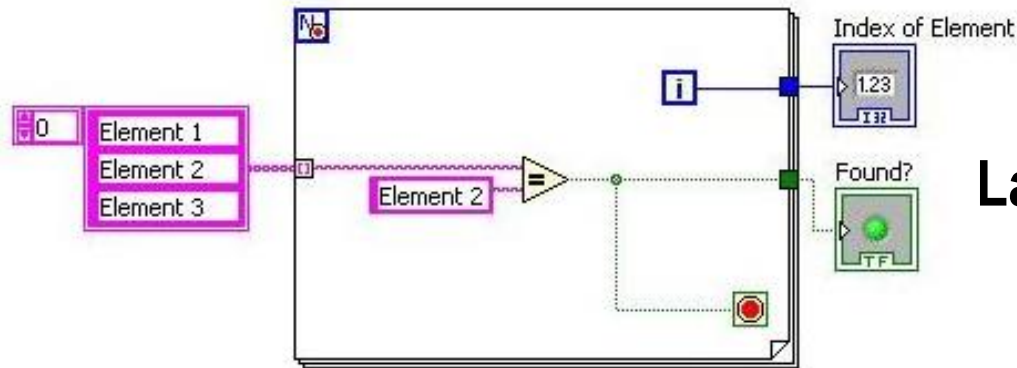

# LabVIEW 8.5 - For Loop with Break

LabVIEW 8.20

- Run a fixed number of times or until a condition is met

LabVIEW 8.5
