**CRYSTAL CLOCK OSCILLATORS**
**LQT Series**

TBM LQT50X-1, 60X-1 are high-precision crystal oscillators composed of AT-cut crystal with excellent temperature features and low-energy, high-drive CMOS IC.

Existing power synchronization system can be revised into a high-precision crystal synchronization system with little effort, realizing improved sophistication, reliability, and global application of the system.

In particular, it has been simplified for output only of power frequencies most frequently used for high precision, high reliability, and low cost.

**■ Features**

- 1) Revision of the oscillator to the power supply sync system produces high-precision quartz synchronization.
- 2) The simple function (at 50 Hz or 60 Hz) realized low price and high precision.
- 3) Use of CMOS IC produces high output (TTL one-gate drive possible) at low energy consumption (5.0V 0.5mA at maximum).
- 4) The metal package makes it easy to prevent radiation of unwanted oscillation output, and maintains high reliability.

**■ Applications**

- 1) Quartz synchronization for power synchronization equipment
- 2) Oscillation for various high-precision timers
- 3) Oscillation for high-precision clocks
