SPECIFICATIONS

- Features

- Super high flux output and high luminance
- Designed for high current operation
- Low thermal resistance
- SMT solderability
- Lead (Pb) Free Product – RoHS Compliant

- Applications

- General Illumination
 - Outdoor & Indoor architectural lighting
 - Decorative lighting
 - Torch lighting
 - Portable lighting (Flash and lamp) and Reading lighting
 - LCD Backlighting

- Description

Z-Power series is designed for high current operation and high flux output applications.

Z-Power LED's thermal management perform exceeds other power LED solutions.

It incorporates state of the art SMD design and Thermal emission material.

Z Power LED is ideal light sources for general illumination applications, custom designed solutions, automotive large LCD backlights.

Full Code explanation of Z-Power LED series

Full code form : $X_1 X_2 X_3 X_4 X_5 X_6 - X_7 X_8 - X_9 X_{10} X_{11} X_{12} X_{13}$

1. Part number

- X_1 : Color
- X_2 : Z-Power LED series number
- X_3 : LENS type
- X_4 : Chip Quantity
- X_5 : Package outline size
- X_6 : Metal PCB type

2. Internal Number

- X_7
- X_8

3. Code Labeling

- X_9 : Luminous Flux (or Radiant Flux for Royal)
- $X_{10} X_{11} X_{12}$: Dominant Wavelength (or x,y coordinates rank code)
- X_{13} : Forward Voltage

For more information about binning and labeling, refer to the Application Note -1

20. Soldering Profile

(1) Reflow Soldering Conditions / Profile

(2) Hand Soldering conditions

- Lead : Not more than 3 seconds @MAX280°C
- Slug : Use a thermal-adhesives

* Caution

1. Reflow soldering should not be done more than one time.
2. Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, suitable tools have to be used.
3. Die slug is to be soldered.
4. When soldering, do not put stress on the LEDs during heating.
5. After soldering, do not warp the circuit board.
6. Recommend to use a convection type reflow machine with 7 ~ 8 zones.

21. Precaution for use

(1) Storage

Avoid the absorption of moisture, we recommended to store Z Power LEDs in a dry box (or desiccator) with a desiccant . Otherwise, store them in the following environment:

Temperature : 5℃~30℃ Humidity : 50% max.

(2) Precaution after opening packaging

However LED is correspond SMD, when LED be soldered dip, interfacial separation may affect the light transmission efficiency, causing the light intensity to drop.

Attention in followed.

a. Soldering should be done right after opening the package (within 24Hrs).

b. Keeping of a fraction

- Sealing

- Temperature : 5 ~ 40℃ Humidity : less than 30%

c. If the package has been opened more than 1week or the color of desiccant changes, components should be dried for 10-12hr at 60±5℃.

(3) Any mechanical force or any excess vibration shall not be applied to apply during cooling process to normal temp after soldering.

(4) Avoid quick cooling

(5) Components should not be mounted on warped direction of PCB.

(6) Anti radioactive ray design is not considered for the products listed here in.

(7) Gallium arsenide is used in some of the products listed in this publication. These products are dangerous if they are burned or smashed in the process of disposal. It is also dangerous to drink the liquid or inhale the gas generated by such products when chemically disposed.

(8) This device should not be used in any type of fluid such as water, oil, organic solvent and etc. When washing is required, IPA (Isopropyl Alcohol) should be used.

(9) When the LEDs are illuminating, operating current should be decided after considering the package maximum temperature.

(10) LEDs must be stored to maintain a clean atmosphere. If the LEDs are stored for 3 months or more after being shipped from SSC, a sealed container with a nitrogen atmosphere should be used for storage.

(11) The appearance and specifications of the product may be modified for improvement without notice.

(12) The package with lens can NOT be solder reflowed. It will damage the lens.

(13) Long time exposure of sunlight or occasional UV exposure will cause lens discoloration.

(14) Slug polarity is anode.

22. Handling of silicone resin LEDs

Z-Power LED is encapsulated by silicone resin for the highest flux efficiency.

Notes for handling of Silicone resin Z-Power LEDs

- 1) Avoid touching silicone resin parts especially by sharp tools such as Pincette(Tweezers)**
- 2) Avoid leaving fingerprints on silicone resin parts.**
- 3) Dust sensitivity silicone resin need containers having cover for storage.**
- 4) When populating boards in SMT production, there are basically no restrictions regarding the form of the pick and place nozzle, except that mechanical pressure on the surface of the resin must be prevent.**
- 5) Please do not force over 3000 gf impact or pressure diagonally on the silicon lens.
It will cause fatal damage of this product**
- 6) Please do not recommend to cover the silicone resin of the LEDs with other resin (epoxy, urethane, etc)**
