----	--------------------------------	----

## 1. General Information

### 1.1 Test objects

The object of this test is DTU-Pro, version number DTU-PRO-V0.0.1-1104-1409.

### 1.2 Purpose of the test

Verify that the changes take effect and confirm that the basic functions of the DTU are working properly.

### 1.3 Test configuration

equipment	model	Numbering
Micro Inverse	MI-600 * 2	104142104579 104033102322
	MI-1200 * 2	106041600040
DTU	BTD-Pro	10F700000046
DC source	Chroma 62020H-150S*2	

## 1.4 Test Results

### 1.4.1 Test Case Statistics

number of test cases	Pass quantity	number of failures	Unmeasured quantity
21	21	0	0

### 1.4.2 List of untested cases

serial number	test case	Untested reason	follow up measures
N/A			

### 1.4.3 Failed use case list

serial number	test case	Defect number	follow up measures
---------------	-----------	---------------	--------------------

DTU-PRO-V0.0.1 test report.docx

-----	--	--	--

## 1.4.4 Summary of problems encountered in testing

serial number		Subsequent processing method
1	Description When the DTU program is upgraded locally through the U disk, it is found that some U disks are not supported. It is recommended that the after-sales personnel use the upgradeable U disk model in Wang Hongze's hand.	

## 2. Test cases and records

## 2.1 Local upgrade DTU program

Test case name:				
local upgrade DTU program				
Test executor: Dai Tihu	Test Date: November 7, 2019	Test Results: ÿPass, ÿFail, ÿUntested		
skills requirement				
The DTU-Pro can be upgraded locally through U disk, the firmware storage path: root directory\Update\Update.hex.				
precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
test steps				
Serial number	detailed description	Desired result	actual results	state
1	Upgrade the DTU firmware locally to the beta version.	After the upgrade the DTU works fine.	When the DTU program is upgraded locally through the U disk, it is found that some U disks are not supported. It is recommended that the after-sales personnel use the upgradeable U disk model in Wang Hongze's hand.	Test passed

2.2 Site Construction and Networking

Test Case Name: Website Construction and Networking				
Test executor: Dai Tihu	Test Date: November 5, 2019	Test Results: ÿPass, ÿFail, ÿUntested		
skills requirement				
The platform was released and the networking was successful.				
precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
test steps				
Serial number	detailed description	Desired result	actual results	state
1	Create a new power station, click Networking, and check the networking status.	The networking is correct.		Test passed

### 2.3 Platform upgrade DTU program

Test case name: Platform upgrade DTU program		
Test executor:	Test Date:	Test Results:
Dai Tihu	November 6, 2019	ÿPass, ÿFail, ÿUntested
skills requirement		
Supports remote upgrade of DTU programs from the platform.		
precondition		
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.		
test steps		

DTU-PRO-V0.0.1 test report.docx

Serial number	detailed description	Desired result	actual results	state
1	Upgrade the DTU program on the platform to the previous release version.	The DTU upgrade was successful.	Upgrade to V0.0.1, the upgrade time is about 6 minutes.	Test passed
2	Upgrade the DTU program from the previous release version to this beta version on the platform.	The DTU upgrade was successful.	Upgrade to V0.0.1, the upgrade time is about 7 minutes.	Test passed

2.4 Platform upgrade micro-inverse program

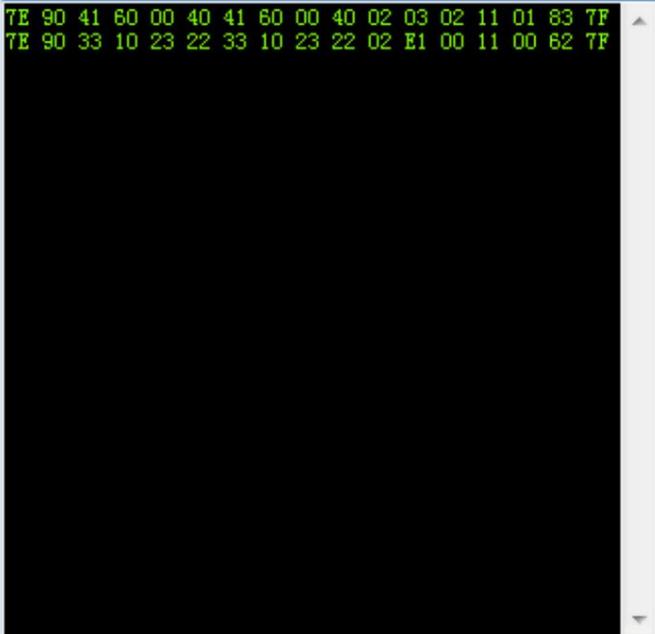

Test case name:		
Platform upgrade micro-inverse program		
Test executor:	Test Date:	Test Results:
Dai Tihu	November 5, 2019	yPass, yFail, yUntested
skills requirement		
Supports remote upgrade of micro-inverse programs on the platform.		
precondition		
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.		

test steps				
Serial number	detailed description	Desired result	actual results	state
1	Upgrade the one-drag-two micro-inverse program to the latest release version on the platform.	The micro-inverse program was upgraded successfully.	Upgrading from V2.36 to V2.34 takes about 28 minutes. Upgrade from	Test passed
2	Upgrade the one-drag-four micro-inverse program to the latest release version on the platform.	The micro-inverse program was upgraded successfully.	V1.38 to V1.40, about 7 minutes.	Test passed

## 2.7 Heartbeat frame check

Test Case Name: Heartbeat Frame Check				
Test executor: Dai Tihu	Test Date: November 6, 2019	Test Results: ÿPass, ÿFail, ÿUntested		
skills requirement				
When the DTU does not send data frames, it sends heartbeat frames every 1 minute.				
precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
test steps				
Serial number	detailed description	Desired result	actual results	state
1	Check the heartbeat frame uploaded by the DTU on the platform.	The heartbeat frame is correct.	The heartbeat frame is normal, but the heartbeat frame may be repeatedly sent when the network is unstable.	Test passed
Test Data

## 2.8 INFO FRAME CHECK

Test Case Name:				
InfoFrame Check				
Test executor:	Test Date:	Test results:		
Dai Tihu	November 6, 2019	ÿPass, ÿFail, ÿUntested		
skills requirement				
The information frame sent by the DTU to the platform should not be excessive, resulting in an ID mismatch.				
precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
Test step serial				
number	detailed description	Desired result	actual results	state

DTU-PRO-V0.0.1 test report.docx

1	Edit the plant, power off the DTU and restart it, check the info frame. Repeat five times.	Information frames are not sent much.	In the micro-inverse version information uploaded by Dtu, different port version numbers of the same micro-inverse may be inconsistent. The platform only chooses to handle version information for the first port.	Test passed
Test Data

## 2.9 Data Frame Check

Test Case Name:		
DataFrame Check		
Test executor:	Test Date:	Test Results:
Dai Tihu	November 7, 2019	yPass, yFail, yUntested
skills requirement		
DTU uploads data every 15 minutes, and if it is uploaded in sub-packets, the packet interval is about 10s.		
precondition		
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.		

DTU-PRO-V0.0.1 test report.docx

test steps				
Serial number	detailed description	Desired result	actual results	state
1	Edit the power station, check the data frame no less than five times.	Packet interval 10s. The first package of data	in the early morning, the data such as the power generation of the day is cleared, and the cumulative power generation is consistent with the last package of the previous day.	Test passed
2	Check that the data in the dataframe is correct.	All data are correct and decimal places are correct.		Test passed

The first package of data in the early morning, the data such as the power generation of the day is cleared, and the accumulated power generation is consistent with the last package of the previous day.

DTU-PRO-V0.0.1 test report.docx

Serial number	detailed description	Desired result	actual results	state
1	Check the relevant data displayed by the platform. The data appears normal.			Test passed
<b>Test Data</b>				
N/A				
<b>data analysis</b>				
N/A				
<b>Image/Waveform</b>				
<p>The power station shows:</p>				
<b>Remark</b>				
N/A				

2.11 Remote restart micro-inverse of the platform

<b>Test case name:</b>		
Platform remote restart micro-inverse		
<b>Test executor:</b> wearing a tiger	<b>Test date:</b> November 6, 2019	<b>Test Results:</b> yPass, yFail, yUntested
<b>skills requirement</b>		
Support remote restart microinverse.		

DTU-PRO-V0.0.1 test report.docx

precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
test steps				
Serial number	detailed description	Desired result	actual results	state

2.12 Platform remote shutdown micro-inverse

Test case name: Platform remote shutdown micro-inverse				
Test executor: wearing a tiger	Test date: November 7, 2019	Test Results: ÿPass, ÿFail, ÿUntested		
skills requirement				
Support remote shutdown micro-inverse.				
precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
test steps				
Serial number	detailed description	Desired result	actual results	state
1	In the test station, select Shutdown Micro-Inverter. Shut	down successfully.	A single control is successful, Multiple units are not supported control (platform optional, But the prompt command is issued fail)	Test passed
Test Data				
N/A

## 2.17 Clearing the ground fault

Test Case Name:				
Clear Ground Fault				
Test executor:	Test Date:		Test Results:	
Dai Tihu	November 7, 2019		ÿPass, ÿFail, ÿUntested	
skills requirement				
Support for clearing ground faults.				
precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
Test step serial				
number	detailed description	Desired result	actual results	state
1	At the test station, select Clear Ground Fault.		A single control is successful, and multiple control at the same time is not supported (the platform is not optional)	Test passed
Test Data

## 2.20 DTU data clear

Test case name: DTU data clear				
Test executor: Dai Tihu	Test Date: November 6, 2019	Test Results: ÿPass, ÿFail, ÿUntested		
skills requirement				
When the communication between the micro-inverter and the DTU is interrupted, about 30 minutes later, the DTU will clear the micro-inverter data to zero, and the power generation data will not be cleared.				
precondition				
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.				
Test step serial				
number	detailed description	Desired result	actual results	state
1	After the micro-inverter continues to output power for a period of time, the DTU will display the correct information such as power generation, voltage, and power generation. Disconnect the micro-inverter DC		14:31 Disconnect the micro inverter power	Test passed
2	power supply. Wait for a while until the data showing micro-inverse on the DTU is cleared. Grab the data packets uploaded by DTU to the platform and check the data.	Data is cleared.	14:56 The data in the data frame sent by DTU is cleared, about 25 minutes.	Test passed

2.21 Switching the Networking Mode

Test case name:		
Networking mode switch		
Test executor:	Test Date:	Test Results:
Dai Tihu	November 7, 2019	ÿPass, ÿFail, ÿUntested
skills requirement		
DTU-Pro supports modifying the networking mode on the platform: 0-GPRS mode, 2-network cable mode.		
precondition		
Correctly connect the power supply, micro-inverter, DTU and other equipment. After the check is correct, the power-on operation is normal.		
test steps		

DTU-PRO-V0.0.1 test report.docx

Serial number	detailed description	Desired result	actual results	state
1	Change the networking mode to network cable on the platform. After five minutes, please check the DTU networking status, and then plug in the network cable to check the networking status.	The switch to the network cable mode is successful.	After switching to the network cable mode, the DTU needs to be restarted to successfully connect to the network. But Wang Hongze's test can be switched successfully.	Test passed
2	Modify the networking method on the platform to GPRS, unplug the network cable after one minute, please check the network status of DTU.	The switch to GPRS mode is successful.		Test passed
