

Features

- Low Cost Plastic: SC-70 (SOT-363) Package
- Low Insertion Loss: < 0.3 dB @ 900 MHz
- Low Power Consumption: < 15 μA @ -2.3 Volts
- Positive or Negative 2.3 to 8 Volt Control

Description

M/A-COM's SW-456 is a GaAs monolithic switch in a low cost SC-70 (SOT-363) surface mount plastic The SW-456 is ideally suited for package. applications where very low power consumption, low insertion loss, very small size and low cost are required. Typical applications are in dual band systems where switching between small signal components is required, i.e. filter banks, single-band LNA's, converters, etc. The SW-456 can be used in applications up to 0.25 watts in systems such as PCS. DCS1800, cellular. GSM, CDMA. wireless W-CDMA and other analog/digital communication systems.

The SW-456 is fabricated using a mature 0.5 micron PHEMT process. The process features full passivation for performance and reliability.

Ordering Information

Part Number	Package		
SW-456 PIN	Bulk Packaging		
SW-456TR	1000 piece reel		
SW-456TR-3000	3000 piece reel		
SW-456SMB	Sample Test Board		

Note: Reference Application Note M513 for reel size information.

Absolute Maximum Ratings¹

1

Parameter	Absolute Maximum		
Max Input Power (0.5 - 3.0 GHz)			
3 V Control	+30 dBm		
5 V Control	+33 dBm		
Operating Voltage	+8.5 volts		
Operating Temperature	-40°C to +85°C		
Storage Temperature	-65°C to +150°C		

1. Exceeding any one or combination of these limits may cause permanent damage to this device.

Transients	In-Band	mV		25	—		
Control Current	ol Current V _{CTL} = -2.3 V		_	4	15		

2. External DC blocking capacitors are required on all RF ports when using positive voltage control.

3. Insertion loss can be optimized by varying the DC blocking capacitor value, e.g. 1000 pF for 100 MHz - 1 GHz, 39 pF for 0.5 GHz - 3 GHz.

Qualification

Qualified to M/A-COM specification REL-201, Process Flow –2.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Truth Table

Mode (Control)	V1	V2	RFC - RF1	RFC - RF2
Positive ⁴	0 ± 0.2 V	+2.3 to +8 V	Off	On
	+2.3 to +8 V	0 ± 0.2 V	On	Off
Negative ⁵	0 ± 0.2 V	-2.3 V to -8 V	On	Off
	-2.3 V to -8 V	0 ± 0.2 V	Off	On

 External DC blocking capacitors are required on all RF ports. 1000 pF capacitors used for positive control voltage. For higher frequency operation, smaller value DC blocking capacitors can be substituted.

If negative control is used, DC blocking capacitors are not required on RF ports.
