1 AT Commands Description

This manual lists detailed information about the AT command set used with the WISMO218.

2 3GPP TS 27.005 commands

2.1 General configuration commands

2.1.1 +CSMS Select Messages Service

| Description | Command | Possible Response(s) |
|----------------------------------|-----------------|--|
| Select messages service | +CSMS=<service> | +CSMS: <mt>,<mo>,<bm> +CMS ERROR: <err> |
| Get current service and settings | +CSMS? | +CSMS: <service>,<mt>,<mo>,<bm> |
| Get supported services | +CSMS=? | +CSMS: (list of supported <service>s) |

Parameters

| <service> | Description |
|----------------------|---|
| 0 (Default value) | 3GPP TS 23.040 and 3GPP TS 23.041 |
| 1 | 3GPP TS 23.040 and 3GPP TS 23.041 (the requirement of <service> setting 1 is mentioned under corresponding command descriptions) |

| <mt>, <mo>, <bm> | Description |
|----------------------|--------------------|
| 0 | Type not supported |
| 1 (Default value) | Type supported |

Clarification

<service> = 1 shall be used only on dual OS platforms i.e when TE is the only SMS client (SMS are only routed to TA in this case)

<service> = 0 shall be used by default.

2.1.2 +CPMS Preferred Messages Storage

| Description | Command | Possible Response(s) |
|----------------------------|--------------------------------|--|
| Select memory storage | +CPMS=<mem1>[,<mem2>[,<mem3>]] | +CPMS:<used1>,<total1>,<used2>,<total2>,<used3>,<total3> +CMS ERROR: <err> |
| Get current storage status | +CPMS? | +CPMS:<mem1>,<used1>,<total1>,<mem2>,<used2>,<total2>,<mem3>,<used3>,<total3> +CMS ERROR: <err> |
| Get supported storages | +CPMS=? | +CPMS: (list of supported <mem1>s),(list of supported <mem2>s),(list of supported <mem3>s) |

Parameters

| <mem x> | Description |
|---------------------|---|
| "SM" | Only "SM" storage is supported "BM", "ME", "MT", "TA", "SR" memory locations are NOT supported |
| <used x>, <total x> | Description |
| Integer type | Computed value |

2.1.3 +CMGF Messages Format

| Description | Command | Possible Response(s) |
|-----------------------|----------------|------------------------------------|
| Select message format | +CMGF=[<mode>] | |
| Get current format | +CMGF? | +CMGF: <mode> |
| Get supported formats | +CMGF=? | +CMGF: (list of supported <mode>s) |

| <mode> | Description |
|--------|-------------|
| 0 | PDU mode |
| 1 | Text mode |

| <mode> | Description |
|---------|--------------------|
| omitted | Use previous value |

2.2 Message configuration commands

2.2.1 +CSCA Service Center Address

| Description | Command | Possible Response(s) |
|-----------------------|-----------------------|----------------------|
| Update SMSC address | +CSCA=<sca>[,<tosca>] | |
| Get current format | +CSCA? | +CSCA: <sca>,<tosca> |
| Get supported formats | +CSCA=? | |

Parameters

| <sca> | Description |
|-------------|--------------------------|
| String type | SC address Address-Value |

| <tosca> | Description |
|--------------|----------------------------|
| Integer type | SC address Type-of-Address |

Clarification

This command read and writes the service center address in EF-SMSP (U)SIM file.

If the SCA is not readable or empty, read command returns an empty string.

At switch on, the SCA is read on (U)SIM to have a default SCA for send and write command in text mode. (In PDU mode, SCA can be provided in PDU).

Service Center Address is reset on switch on and is read on SIM on first PC connection after switch on.

See data stored by +CSAS for default values.

2.2.2 +CSCB Select Cell Broadcast Messages Types

| Description | Command | Possible Response(s) |
|------------------|----------------------------------|----------------------|
| Select CBM types | +CSCB=[<mode>[,<mids>[,<dcss>]]] | |

| Description | Command | Possible Response(s) |
|---------------------|---------|---------------------------------------|
| Get current values | +CSCB? | +CSCB: <mode>,<mids>,<dcss> |
| Get supported modes | +CSCB=? | +CSCB: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|--------|---|
| 0 | Message types specified in <mids> and <dcss> are accepted |
| 1 | Message types specified in <mids> and <dcss> are not accepted |

| <mids> | Description |
|-------------|---|
| String type | all different possible combinations of CBM message identifiers (refer <mid> in 27.005) |

| <dcss> | Description |
|-------------|---|
| String type | all different possible combinations of CBM data coding schemes (refer <dcs> in 27.005) Default value: no DCS accepted |

Clarification

All the <dcss> values can be accepted or up to 5 different <dcss> values can be accepted.

Ranges are not supported for <mids> and <dcss>, i.e notation "0,1,5,320-478,922" is not allowed for <mids> and notation "0-3,5" is not allowed for <dcss> .

Up to SPB_MSG_ID_LIST_SIZE (15) different <mids> values can be accepted.

AT+CSCB=1 means all <dcss> are accepted but this command has no effect on the list of the <mids> accepted. To modify those lists: use before the AT+CSCB=0 command to select no mid and no dcs, and after this operation, add some dcs or mid to the current lists.

AT+CSCB=0,<mids> : add the <mids> values in the <mids> current list handle by the mobile.

AT+CSCB=0,,<dcss> : add the <dcss> values in the < dcss > current list handle by the mobile

If AT+CSCB=0,"<value>" is received while the list of <mids> is full, OK is returned and new value is not added.

2.2.3 +CSMP Set Text Mode Parameters

| Description | Command | Possible Response(s) |
|------------------------------|-------------------------------------|---------------------------------|
| Select SM parameters | +CSMP=[<fo>[,<vp>[,<pid>[,<dcs>]]]] | |
| Get current values | +CSMP? | +CSMP: <fo>,<vp>,<pid>,<dcs> |
| Test if command is supported | +CSMP=? | |

Parameters

| | Description |
|--------------------------|-------------|
| <fo>, <vp>, <pid>, <dcs> | |

| | |
|--------------|---------------------------------|
| Integer type | Refer to 27.005 for description |
|--------------|---------------------------------|

Clarification

The enhanced validity period format \$(EVPF)\$, see [23.040] is not supported.

<fo> is only for SMS-DELIVER, SMS-SUBMIT or SMS-STATUS-REPORT.

See data stored by +CSAS for default values.

2.2.4 +CSDH Show Text Mode Parameters

| Description | Command | Possible Response(s) |
|----------------------------|----------------|------------------------------------|
| Select header presentation | +CSDH=[<show>] | |
| Get current status | +CSDH? | +CSDH: <show> |
| Get supported values | +CSDH=? | +CSDH: (list of supported <show>s) |

Parameters

| | Description |
|---------|---------------------------------|
| <show> | |
| 0 | Do not show header values |
| 1 | Show the values in result codes |
| omitted | Use previous value |

2.2.5 +CSAS Save Settings

| Description | Command | Possible Response(s) |
|------------------------------------|-------------------|---------------------------------------|
| Save SM service settings | +CSAS=[<profile>] | +CMS ERROR: <err> |
| Get the list of available profiles | +CSAS=? | +CSAS: (list of supported <profile>s) |

Parameters

| <profile> | Description |
|-----------|---------------------------------------|
| 0 | Save SM service settings in profile 0 |
| 1 | Save SM service settings in profile 1 |
| omitted | Use previous value |

Clarification

Parameter stored by +CSAS

| Command | Parameter name | Length | Default value | Non volatile memory filed |
|---------|----------------|----------|---------------|--|
| +CSCA | <sca> | 12 bytes | 0xFF..0xFF | a_atp_ScAddress |
| +CSCA | <tosca> | 12 bytes | 0xFF..0xFF | a_atp_ScAddress |
| +CSMP | <fo> | 1 byte | 0x11 | v_hee_Smsfo |
| +CSMP | <vp> | 1 byte | 0x00 | v_hee_SmsVp.s_RelTime. v_NbMinutes |
| +CSMP | <vp> | 1 byte | 0x18 | v_hee_SmsVp.s_RelTime. v_NbHours |
| +CSMP | <vp> | 1 byte | 0x00 | v_hee_SmsVp.s_RelTime. v_NbDays |
| +CSMP | <vp> | 1 byte | 0x00 | v_hee_SmsVp.s_RelTime. v_NbWeeks |
| +CSMP | <vp> | 20 bytes | 0x00..0x00 | v_hee_SmsVp.s_RelTime. v_Gap_RelativeTime |
| +CSMP | <pid> | 1 byte | 0x00 | v_hee_SmsPid |
| +CSMP | <dcs> | 1 byte | 0x00 | v_hee_SmsDcs |

2.2.6 +CRES Restore Settings

| Description | Command | Possible Response(s) |
|------------------------------------|-------------------|---------------------------------------|
| Restore SM service settings | +CRES=[<profile>] | +CMS ERROR: <err> |
| Get the list of available profiles | +CRES=? | +CRES: (list of supported <profile>s) |

Parameters

| <profile> | Description |
|-----------|--|
| 0 | Restore SM service settings from profile 0 |
| 1 | Restore SM service settings from profile 1 |
| omitted | Use previous value |

2.3 Message receiving and reading commands

2.3.1 +CNMI New Messages Indication to TE

| Description | Command | Possible Response(s) |
|--|---|---|
| Select procedure for received messages | +CNMI=[<mode>[,<mt>[,<bm>[,<ds>[,<bfr>]]]]] | +CMS ERROR: <err> |
| Get current values | +CNMI? | +CNMI:<mode>,<mt>,<bm>,<ds>,<bfr> |
| Get supported values | +CNMI=? | +CNMI: (list of supported <mode>s),(list of supported <mt>s),(list of supported <bm>s),(list of supported <ds>s),(list of supported <bfr>s) |

Parameters

| <mode> | Description |
|--------|---|
| 0 | Buffer unsolicited result codes in the TA. When TA result code buffer is full: - The oldest indication is discarded and replaced with the new one when +CSMS=0 - All indications are buffered when +CSMS=1 |

WISMO218 AT Command Manual

| <mode> | Description |
|---------------------|---|
| 1 | Discard indication and reject new received message unsolicited result codes when TA-TE link is reserved (e.g. in on-line data mode). Otherwise forward them directly to the TE. Not supported for CBM messages. |
| 2 | Buffer unsolicited result codes in the TA when TA-TE link is reserved (e.g. in on-line data mode) and flush them to the TE after reservation. Otherwise forward them directly to the TE |

| <mt> | Description |
|-------------------|--|
| 0 | No SMS-DELIVER indications are routed to the TE |
| 1 | If SMS-DELIVER is stored into ME/TA, indication of the memory location is routed to the TE using unsolicited result code: +CMTI |
| 2 | SMS-DELIVERs (except class 2 messages and messages in the message waiting indication group (store message)) are routed directly to the TE using unsolicited result code: +CMT |
| 3 | Class 3 SMS-DELIVERs are routed directly to TE using unsolicited result codes defined in <mt>=2. Messages of other data coding schemes result in indication as defined in <mt>=1 |

| <bm> | Description |
|-------------------|--|
| 0 | No CBM indications are routed to the TE |
| 2 | New CBMs are routed directly to the TE using unsolicited result code: +CBM |

| <ds> | Description |
|-------------------|---|
| 0 | No SMS-STATUS-REPORTs are routed to the TE |
| 1 | SMS-STATUS-REPORTs are routed to the TE using unsolicited result code: +CDS |

| <bfr> | Description |
|--------------------|---|
| 0 | TA buffer of unsolicited result codes defined within this command is flushed to the TE when <mode> 1...3 is entered (OK response shall be given before flushing the codes). |
| 1 | TA buffer of unsolicited result codes defined within this command is cleared when <mode> 1...3 is entered |

Clarification

TA result code buffer is in volatile memory. Messages may get lost if the power of ME/TA is switched off before codes are sent to TE. Thus, it is not recommended to use direct message routing ($<\text{mt}>=2$ or 3 , $<\text{bm}>=2$ or 3 , or $<\text{ds}>=1$) with $<\text{mode}>$ value 0 or 2

When $+CSMS <\text{service}>$ is set to 0 , all received SMS are automatically stored in SIM before $+CMT$ or $+CMTI$ URC is sent to TE whatever $<\text{mt}>$ value.

When $+CSMS <\text{service}>$ is set to 1 , depending of its class, SMS has to be acknowledged to network thanks to $+CNMA$ commands. Depending of $<\text{mode}>$, $<\text{mt}>$ and channel status (available or reserved) URC can not or should not be sent to TE. In these cases SMS can be automatically acknowledged or rejected without waiting $+CNMA$ command.

"BM" storage is not supported hence $+CBMI$ is not supported.

"SR" storage is not supported by platform hence $+CDSI$ is not supported.

$+CNMI$ non volatile memory storage:

| Parameter name | Length | Default value | Non volatile memory field |
|-----------------|--------|---------------|---------------------------|
| $<\text{bfr}>$ | 1 bit | 0x00 | v_CNMI_bfr |
| $<\text{ds}>$ | 2 bits | 0x00 | v_CNMI_ds |
| $<\text{bm}>$ | 2 bits | 0x00 | v_CNMI_Bm |
| $<\text{mt}>$ | 2 bits | 0x00 | v_CNMI_Mt |
| $<\text{mode}>$ | 2 bits | 0x00 | v_CNMI_Mode |

2.3.2 $+CNMA$ New Message Acknowledgement to ME/TA

| Description | Command | Possible Response(s) |
|------------------------|---|--|
| Acknowledge indication | if text mode ($+CMGF=1$): $+CNMA$ if PDU mode ($+CMGF=0$): $+CNMA[=<\text{n}>[,<\text{length}>[<\text{CR}>\text{PDU is given}<\text{ctrl-Z/ESC}>]]]$ | +CMS ERROR: $<\text{err}>$ |
| Get supported values | $+CNMA=?$ | if PDU mode ($+CMGF=0$): $+CNMA$: (list of supported $<\text{n}>$ s) |

Parameters

| <n> | Description |
|-----|--|
| 0 | Command operates similarly as defined for the text mode |
| 1 | Send RP-ACK (or buffered result code received correctly) |
| 2 | Send RP-ERROR Acknowledgement TPDU not supported |

Clarification

This command is allowed only if +CSMS <service> is set to 1 and is used to acknowledge SMS received from network.

Routing of SMS-DELIVER and SMS-STATUS-REPORT to ME/TA depends on both +CSMS configuration as well as <mt> and <ds> values of +CNMI.

In PDU, acknowledgement TPDU is not supported

The following table summarizes the SMS-DELIVER notification modes according to these parameters:

| +CNMI <mt> | +CSMS <service>=0 | +CSMS <service>=1 |
|------------|----------------------|----------------------|
| 0 | SMS DELIVER mode = 0 | SMS DELIVER mode = 0 |
| 1 | SMS DELIVER mode = 0 | SMS DELIVER mode = 0 |
| 2 | SMS DELIVER mode = 0 | SMS DELIVER mode = 1 |
| 3 | SMS DELIVER mode = 0 | SMS DELIVER mode = 2 |

When **SMS Mode = 0**: SMS acknowledgement and storage are managed internally by MS whatever their class (if needed they will be stored in SIM)

When **SMS-DELIVER Mode = 1**: SMS with no message class, class 0, class 1, class 3 are sent to ME/TA for acknowledgement (+CNMA expected), they will not be stored in ME, it's up to TE to store them. SMS class 2 & message waiting indication group (Store or Discard) are managed internally by MS (if needed they will be stored in SIM, no +CNMA expected).

When **SMS-DELIVER Mode = 2**: SMS class 3 are sent to ME/TA for acknowledgement (+CNMA expected), they will not be stored in ME, it's up to TE to store them. SMS with no message class, class 0, class 1, class 2 & message in waiting group are managed internally by MS (if needed they will be stored in SIM, no +CNMA expected).

Following table summarizes the STATUS-REPORT (SR) notification modes according to +CSMS and <ds> parameters:

| +CNMI <ds> | +CSMS <service>=0 | +CSMS <service>=1 |
|------------|------------------------|------------------------|
| 0 | STATUS REPORT mode = 0 | STATUS REPORT mode = 0 |
| 1 | STATUS REPORT mode = 0 | STATUS REPORT mode = 1 |

When **STATUS-REPORT Mode = 0**: MS manages SR internally

When **STATUS-REPORT Mode = 1**: SR are sent to ME/TA for acknowledgement and storage.

Refer also to +CMT URC description for waiting message indication treatment.

2.3.3 +CMGL List Messages

| Description | Command | Possible Response(s) |
|---------------------------|----------------|---|
| List messages with status | +CMGL[=<stat>] | if text mode (+CMGF=1), command successful: +CMGL: <index>,<stat>,<oa/da>,[<alpha>],[<scts>][,<tooa/toda>,<length>]<CR><LF><data>[<CR><LF> +CMGL: <index>,<stat>,<da/oa>,[<alpha>],[<scts>][,<tooa/toda>,<length>]<CR><LF><data>[...]] if PDU mode (+CMGF=0) and command successful: +CMGL:<index>,<stat>,[<alpha>],<length><CR><LF><pdu>[<CR><LF>+CMGL:<index>,<stat>,[<alpha>],<length><CR><LF><pdu>[...]] otherwise: +CMS ERROR: <err> |
| Get supported values | +CMGL=? | +CMGL: (list of supported <stat>s) |

Parameters

| <stat> | Description |
|-------------------|--|
| 0 "REC UNREAD" | Received unread message (i.e. new message) |
| 1 "REC READ" | Received read message |
| 2 "STO UNSENT" | Stored unsent message |
| 3 "STO SENT" | Stored sent message |

| <stat> | Description |
|---------------------|--------------------|
| 4 "ALL" | All messages |

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

Other parameters are extracted from memory storage.

Clarification

Only SMS-SUBMIT and/or SMS-DELIVER can be read.

SMS-COMMAND are not supported.

CBM are not stored in ME/TA memory. CBM are not saved in SIM.

2.3.4 +CMGR Read Message

| Description | Command | Possible Response(s) |
|------------------------------|----------------|--|
| Read a message | +CMGR=<index> | if text mode (+CMGF=1), command successful and SMS-DELIVER: +CMGR: <stat>,<oa>,[<alpha>],<scts>[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]<CR><LF><data> if text mode (+CMGF=1), command successful and SMS-SUBMIT: +CMGR: <stat>,<da>,[<alpha>][,<toda>,<fo>,<pid>,<dcs>,[<vp>],<sca>,<tosca>,<length>]<CR><LF><data> if PDU mode (+CMGF=0) and command successful: +CMGR: <stat>,[<alpha>],<length><CR><LF><pdu> otherwise: +CMS ERROR: <err> |
| Test if command is supported | +CMGR=? | |

Parameters

| <index> | Description |
|----------------------|----------------------------------|
| 1..255 | Message location in "SM" memory. |

| <stat> | Description |
|-------------------|--|
| 0 "REC UNREAD" | Received unread message (i.e. new message) |
| 1 "REC READ" | Received read message |
| 2 "STO UNSENT" | Stored unsent message |
| 3 "STO SENT" | Stored sent message |
| 4 "ALL" | All messages |

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

Other parameters are extracted from memory storage.

Clarification

Only SMS-SUBMIT and/or SMS-DELIVER can be read.

SMS-COMMAND are not supported.

CBM are not stored in ME/TA memory. CBM are not saved in SIM

2.4 Message sending and writing commands

2.4.1 +CMGS Send Message

| Description | Command | Possible Response(s) |
|---------------------------------|--|--|
| Send a message | if text mode (+CMGF=1): <code>+CMGS=<da>[,<toda>]<CR></code> text is entered<ctrl-Z/ESC> if PDU mode (+CMGF=0) <code>+CMGS=<length><CR></code> PDU is given<ctrl-Z/ESC> | if text mode (+CMGF=1) and sending successful: <code>+CMGS: <mr>[,<scts>]</code> if PDU mode (+CMGF=0) and sending successful: <code>+CMGS: <mr>[,<ackpdu>]</code> if sending fails: <code>+CMS ERROR: <err></code> |
| Test if command is supported | <code>+CMGS=?</code> | |

Parameters

For all other parameters, refer to +CMT URC description.

In text mode <scts> is not supported, in PDU mode <ackpdu> is not supported.

Clarification

In text mode: entered text is sent to address <da> and all current settings (refer to +CSMP and +CSCA) are used to construct the actual PDU in ME/TA.

In PDU mode: <length> must indicate the number of octets coded in the TP layer data unit to be given (i.e. SMSC address octets are excluded).

The TA sends a four character sequence <CR><LF><greater_than><space> (IRA 13, 10, 62, 32) after command line is terminated with <CR>; after that text can be entered or PDU can be given from TE to ME/TA.

The DCD signal shall be in ON state while text or PDU is entered.

The echoing of entered characters back from the TA is controlled by V.25ter echo command E.

In text mode, the entered text should be formatted as follows:

- if <dcs> (set with +CSMP) indicates that GSM 7 bit default alphabet is used and <fo> indicates that TP-User-Data-Header-Indication is not set: ME/TA converts the entered text into the GSM 7 bit default alphabet according to rules of Annex A; backspace can be used to delete last character and carriage returns can be used (previously mentioned four character sequence shall be sent to the TE after every carriage return entered by the user);
- if <dcs> indicates that 8-bit or UCS2 data coding scheme is used or <fo> indicates that TP-User-Data-Header-Indication is set: the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. two characters 2A (IRA 50 and 65) will be converted to an octet with integer value 42).

In PDU mode:

- The PDU shall be hexadecimal format (similarly as specified for <pdu>) and given in one line; ME/TA converts this coding into the actual octets of PDU. When the length octet of the SMSC address (given in the PDU) equals zero, the SMSC address set with command Service Centre Address +CSCA is used; in this case the SMSC Type-of-Address octet shall not be present in the PDU, i.e. TPDU starts right after SMSC length octet.

Sending can be cancelled by giving <ESC> character (IRA 27).

<ctrl-Z> (IRA 26) must be used to indicate the ending of the message body or PDU.

Text length is limited to PDU max length (164).

2.4.2 +CMSS Send Message from Storage

| Description | Command | Possible Response(s) |
|------------------------------|-------------------------------|---|
| Send a message from storage | +CMSS=<index>[,<da>[,<toda>]] | if text mode (+CMGF=1) and sending successful: +CMSS: <mr>[,<scst>] if PDU mode (+CMGF=0) and sending successful: +CMSS: <mr>[,<ackpdu>] if sending fails: +CMS ERROR: <err> |
| Test if command is supported | +CMSS=? | |

Parameters

| <index> | Description |
|---------|----------------------------------|
| 1..255 | Message location in "SM" memory. |

In text mode <scts> is not supported, in PDU mode <ackpdu> is not supported.

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

Clarification

Since SMS-STATUS-REPORTs, SMS-COMMANDs and CBM are not stored in ME/TA memory, only <index>s of SMS-SUBMITs and/or SMS-DELIVERs can be used in +CMSS.

2.4.3 +CMGW Write Message to Memory

| Description | Command | Possible Response(s) |
|------------------------------|---|-------------------------------------|
| Write a message | if text mode (+CMGF=1): +CMGW[=<oa/da>[,<tooa/toda>[,<stat>]]]<CR> text is entered<ctrl-Z/ESC> if PDU mode (+CMGF=0): +CMGW=<length>[,<stat>]<CR>PDU is given<ctrl-Z/ESC> | +CMGW: <index> +CMS ERROR: <err> |
| Test if command is supported | +CMGW=? | |

Parameters

| <index> | Description |
|---------|----------------------------------|
| 1..255 | Message location in "SM" memory. |

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

Clarification

Text length is limited to PDU max length (164).

2.4.4 +CMGD Delete Message

| Description | Command | Possible Response(s) |
|----------------------|---------------------------|--|
| Delete a message | +CMGD=<index>[,<delflag>] | +CMS ERROR: <err> |
| Get supported values | +CMGD=? | +CMGD: (list of supported <index>s)[,(list of supported <delflag>s)] |

Parameters

| <delflag> | Description |
|----------------------|--|
| 0 (Default value) | Delete the message specified in <index> |
| 1 | Delete all read messages from preferred message storage, leaving unread messages and stored mobile originated messages (whether sent or not) untouched |
| 2 | Delete all read messages from preferred message storage and sent mobile originated messages, leaving unread messages and unsent mobile originated messages untouched |
| 3 | Delete all read messages from preferred message storage, sent and unsent mobile originated messages leaving unread messages untouched |
| 4 | Delete all messages from preferred message storage including unread messages |

| <index> | Description |
|---------|----------------------------------|
| 1..255 | Message location in "SM" memory. |

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

2.5 SMS and CBM unsolicited result codes

2.5.1 +CMTI Received SMS indication

| Description | Result code |
|-----------------------------|----------------------|
| Receive a SM already stored | +CMTI: <mem>,<index> |

Parameters

| <index> | Description |
|---------|----------------------------------|
| 1..255 | Message location in "SM" memory. |

| <mem> | Description |
|-------|------------------------------------|
| "SMS" | Only "SM" storage possible for SMS |

2.5.2 +CMT Received SMS indication

| Description | Result code |
|--------------|---|
| Receive a SM | if text mode (+CMGF=1): +CMT:<oa>,[<alpha>],<scts>[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>] if PDU mode (+CMGF=0): +CMT: [<alpha>],<length><CR><LF><pdu> |

Parameters

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

Clarification

When +CSMS <service> is set to 0, all received SMS are automatically stored in SIM before +CMT is sent to TE.

When +CSMS <service> is set to 1, depending of it class, SMS has to be acknowledged to network thanks to +CNMA commands. Depending of <mode>, <mt> of CNMI or channel status (available or reserved) URC cannot or should not be sent to TE. In these cases SMS can be automatically acknowledged or rejected without waiting +CNMA command.

When a +CMT URC is sent to TE for a SMS that has NOT been acknowledged by TA, a timer is started. If timer expires (15sec) before +CNMA command is received, SMS is rejected.

When a +CMT URC is sent to TE for a SMS that has already been acknowledged by TA a timer is started. If timer expires (15sec) before +CNMA command is received,

SMS is automatically saved in SIM (this is to not to lost an already acknowledged SMS for which +CNMA has not been received in case of switch off). If CNMA is received before timer expiration OK is returned, else ERROR is returned (TE knows that SMS has been stored in SIM).

Message waiting indication:

There are 3 possible cases to receive voice mail notification:

- TP-DCS method (STORE/DISCARD message coding groups in DCS)
- TP-UDH (Special SMS indication IEI in UDH of the SM)
- CPHS method (originating address decoding)

In all cases, the ME manages messages notifications internally (update of EF VMWI CPHS file, acknowledgement...)

In case of TP-DCS method, for message waiting indication group (store message), +CMTI is sent. For message waiting indication group (discard message) +CMT URC is sent but no +CNMA command is expected.

Voice mail waiting indication status are managed by *PSVMWN command.

2.5.3 +CBM Received CBM indication

| Description | Result code |
|---------------|---|
| Receive a CBM | if text mode (+CMGF=1): +CBM: <sn>,<mid>,<dcs>,<page>,<pages><CR><LF><data> if PDU mode (+CMGF=0): +CBM: <length><CR><LF><pdu> |

Parameters

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

2.5.4 +CDS Received status report (SR) indication

| Description | Result code |
|---------------|--|
| Receive a CDS | if text mode (+CMGF=1): +CDS: <fo>,<mr>,<ra>,<tora>,<scts>,<dt>,<st> if PDU mode (+CMGF=0): +CDS: <length><CR><LF><pdu> |

Parameters

For all other parameters, refer to 27.005 §3.1 Parameter Definitions

Clarification

When +CSMS <service> is set to 0, all received SR are automatically acknowledged before +CDS is sent to TE.

When +CSMS <service> is set to 1, SR has to be acknowledged to network thanks to +CNMA commands. Depending of <mode>, <mtn> and channel status (available or reserved) URC can not or should not be sent to TE. In these cases SR can be automatically acknowledged or rejected without waiting +CNMA command.

2.6 +CMS ERROR Message Service Failure Result code

| Value | Description |
|-----------|---|
| 0...127 | 3GPP TS 24.011 [6] clause E.2 values |
| 128...255 | 3GPP TS 23.040 [3] clause 9.2.3.22 values |
| 300 | ME failure |
| 301 | SMS service of ME reserved |
| 302 | Operation not allowed |
| 303 | Operation not supported |
| 304 | Invalid PDU mode parameter |
| 305 | Invalid text mode parameter |
| 310 | (U)SIM not inserted |
| 311 | (U)SIM PIN required |
| 312 | PH-(U)SIM PIN required |
| 313 | (U)SIM failure |
| 314 | (U)SIM busy |
| 315 | (U)SIM wrong |
| 316 | (U)SIM PUK required |
| 317 | (U)SIM PIN2 required |
| 318 | (U)SIM PUK2 required |
| 320 | Memory failure |
| 321 | Invalid memory index |
| 322 | Memory full |
| 330 | SMSC address unknown |
| 331 | No network service |
| 332 | Network timeout |
| 340 | No +CNMA acknowledgement expected |

WISMO218 AT Command Manual

| Value | Description |
|-------|---------------|
| 500 | Unknown error |

3 3GPP TS 27.007 commands

3.1 General commands

3.1.1 +CGMI Request Manufacturer identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|-------------------------------------|
| Read manufacturer Id | +CGMI | <manufacturer> +CME ERROR: <err> |
| Test if command is supported | +CGMI=? | |

Parameters

| <manufacturer> | Description |
|----------------|-----------------------------|
| String type | Manufacturer identification |

3.1.2 +CGMM Request Model Identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|------------------------------|
| Read model | +CGMM | <model> +CME ERROR: <err> |
| Test if command is supported | +CGMM=? | |

Parameters

| <model> | Description |
|-------------|----------------------|
| String type | Model identification |

3.1.3 +CGMR Request Revision Identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|---------------------------------|
| Read revision | +CGMR | <revision> +CME ERROR: <err> |
| Test if command is supported | +CGMR=? | |

Parameters

| <revision> | Description |
|-------------|-------------------------|
| String type | Revision identification |

3.1.4 +CGSN Request product serial number identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|---------------------------|
| Read SN | +CGSN | <sn> +CME ERROR: <err> |
| Test if command is supported | +CGSN=? | |

Parameters

| <sn> | Description |
|-------------|--|
| String type | International mobile equipment identity (IMEI) |

3.1.5 +CSCS Select TE character set

| Description | Command | Possible Response(s) |
|----------------------|-----------------|-------------------------------------|
| Set charset | +CSCS[=<chset>] | |
| Read current charset | +CSCS? | +CSCS: <chset> |
| Get supported values | +CSCS=? | +CSCS: (list of supported <chset>s) |

Parameters

| <chset> | Description |
|---------|---|
| "GSM" | GSM 7 bit default alphabet (3GPP TS 23.038); |
| "UCS2" | 16-bit universal multiple-octet coded character set (ISO/IEC10646); UCS2 character strings are converted to hexadecimal numbers from 0000 to FFFF; e.g. "004100620063" equals three 16-bit characters with decimal values 65, 98 and 99 |
| "IRA" | International reference alphabet (ITU-T T.50) |

3.1.6 +CIMI Request international mobile subscriber identity

| Description | Command | Possible Response(s) |
|------------------------------|---------|-----------------------------|
| Read IMSI | +CIMI | <IMSI> +CME ERROR: <err> |
| Test if command is supported | +CIMI=? | |

Parameters

| <IMSI> | Description |
|--------------------------------------|-------------|
| String type (without double quotes) | IMSI |

3.1.7 +CMUX Multiplexing mode

| Description | Command | Possible Response(s) |
|-----------------------|--|---|
| Activate MUX protocol | +CMUX=<mode>[,<subset>[,<port_speed>[,<N1>[,<T1>[,<N2>[,<T2>[,<T3>[,<k>]]]]]]]]] | +CME ERROR: <err> |
| Read current settings | +CMUX? | +CMUX: <mode>,[<subset>],<port_speed>, <N1>,<T1>, <N2>,<T2>,<T3>[,<k>] +CME ERROR: <err> |
| Get supported values | +CMUX=? | +CMUX: (list of supported <mode>s),(list of supported <subset>s),(list of supported <port_speed>s),(list of supported <N1>s),(list of supported <T1>s),(list of supported <N2>s),(list of supported <T2>s),(list of supported <T3>s),(list of supported <k>s) |

Parameters

| <mode> | Description |
|--------|-----------------|
| 0 | Basic option |
| 1 | Advanced option |

WISMO218 AT Command Manual

| <subset> | Description |
|-----------------------|----------------------|
| 0 (default) | UIH frames used only |
| 1 | UI frames used only |

| <port_speed> | Description |
|---------------------------|--------------------|
| 1 | 9 600 bit/s |
| 2 | 19 200 bit/s |
| 3 | 38 400 bit/s |
| 4 | 57 600 bit/s |
| 5 | 115 200 bit/s |
| 6 | 230 400 bits/s |
| 7 | 460 800 bits/s |
| 8 | 921 600 bits/s |

| <N1> | Description |
|-------------------|---|
| 1- 32768 | Maximum frame size Default: 31 (64 if Advanced option is used) |

| <T1> | Description |
|-------------------|--|
| 1-255 | Acknowledgement timer in units of ten milliseconds Default: 10 (100 ms) |

| <N2> | Description |
|-------------------|--|
| 0-100 | Maximum number of re-transmissions Default: 3 |

| <T2> | Description |
|-------------------|--|
| 2-255 | Response timer for the multiplexer control channel in units of ten milliseconds Default: 30 |

| <T3> | Description |
|-------|--|
| 1-255 | Wake up response timer in seconds Default: 10 |

| <k> | Description |
|-----|---|
| 1-7 | window size, for Advanced operation with Error Recovery options Default: 2 |

Clarification

Value 2 for subset parameter is not supported because CMUX is not running in error recovery mode.

Refer also to 27.010 for more information on parameters values.

+CMUX parameters are stored in non volatile memory:

| Parameter name | Default value | Non volatile memory field |
|----------------|---------------|---------------------------|
| <mode> | 0x00 | v_Mode |
| <subset> | 0x00 | v_Subset |
| <port_speed> | 0x05 | v_PortSpeed |
| <N1> | 0x1F | v_N1 |
| <T1> | 0x0A | v_T1 |
| <N2> | 0x03 | v_N2 |
| <T2> | 0x1E | v_T2 |
| <T3> | 0x0A | v_T3 |
| <k> | 0x02 | v_K |

3.2 Call control commands

3.2.1 +CSTA Select type of address

| Description | Command | Possible Response(s) |
|------------------------|----------------|------------------------------------|
| Select type of address | +CSTA=[<type>] | |
| Get current type | +CSTA? | +CSTA: <type> |
| Get supported types | +CSTA=? | +CSTA: (list of supported <type>s) |

Parameters

| <type> | Description |
|---------|-------------------------------|
| 129 | International type of address |
| 145 | National type of address |
| omitted | Use previous value |

3.2.2 +CMOD Call mode

| Description | Command | Possible Response(s) |
|---------------------|--------------|------------------------------------|
| Select call mode | +CMOD=<mode> | |
| Get current type | +CMOD? | +CMOD: <mode> |
| Get supported types | +CMOD=? | +CMOD: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|--------|--|
| 0 | Single mode |
| 129 | Proprietary value Multimedia call only, without fallback or service change |
| 130 | Proprietary value Multimedia call with fallback to speech |
| 131 | Proprietary value Multimedia call with fallback and service change (allowed for UDI/RDI call only). |

Clarification

+CMOD command is used to select multimedia call mode for further D (Dial) command. Proprietary values are defined to select multimedia call mode.

+CMOD is reset to 0 when call is successfully connected, if a set-up error occurs or when the call is disconnected to avoid request of video telephony call accidentally.

3.2.3 +CHUP Hang-up call

| Description | Command | Possible Response(s) |
|------------------------------|---------|----------------------|
| Hang up calls | +CHUP | |
| Test if command is supported | +CHUP=? | |

Clarification

+CHUP command gives an assured procedure to disconnect the call.

Refer to H command description.

Since only single mode is supported, the execution of the command always disconnects active call.

3.2.4 +CBST Select bearer service type

| Description | Command | Possible Response(s) |
|---------------------|---------------------------------|--|
| Select bearer | +CBST=[<speed>[,<name>[,<ce>]]] | |
| Get current bearer | +CBST? | +CBST: <speed>,<name>,<ce> |
| Get supported types | +CBST=? | +CBST: (list of supported <speed>s),(list of supported <name>s),(list of supported <ce>s) |

Parameters

| <speed> | Description |
|---------|---|
| 0 | Autobauding (automatic selection of the speed; this setting is possible in case of 3.1 kHz modem and non-transparent service) |
| 4 | 2400 bps (V.22bis) |
| 7 | 9600 bps (V.32) |
| 12 | 9600 bps (V.34) |
| 14 | 14400 bps (V.34) |
| 15 | 19200 bps (V.34) |
| 16 | 28800 bps (V.34) |
| 17 | 33600 bps (V.34) |
| 68 | 2400 bps (V.110 or X.31 flag stuffing) |
| 71 | 9600 bps (V.110 or X.31 flag stuffing) |
| 75 | 14400 bps (V.110 or X.31 flag stuffing) |
| 79 | 19200 bps (V.110 or X.31 flag stuffing) |
| 80 | 28800 bps (V.110 or X.31 flag stuffing) |
| 81 | 38400 bps (V.110 or X.31 flag stuffing) |
| 82 | 48000 bps (V.110 or X.31 flag stuffing) |
| 83 | 56000 bps (V.110 or X.31 flag stuffing) |
| 131 | 32000 bps (multimedia) |

WISMO218 AT Command Manual

| <code><speed></code> | Description |
|----------------------------|------------------------|
| 134 | 64000 bps (multimedia) |

| <code><name></code> | Description |
|---------------------------|--|
| 0 | Data circuit asynchronous (UDI or 3.1 kHz modem) |
| 1 | Data circuit synchronous (UDI or 3.1 kHz modem) Supported for multimedia calls only |

| <code><ce></code> | Description |
|-------------------------|--|
| 0 | Transparent Supported for multimedia calls only |
| 1 | Non-transparent |

Clarification

Some bearer capabilities computed from +CBST parameters are stored in non volatile memory. This parameter are used to build the bearer capabilities of the CS data call (cf 24.008 §10.5.4.5)

| Parameter name | Length | Default value | Non volatile memory field |
|-----------------------------------|--------|---------------------------|---------------------------|
| Information transfer capabilities | 3 bits | 0x02 (3.1kHz) | v_InfoTrans |
| Connection element | 2 bits | 0x03 (non transparent) | v_ConnElm |
| Transfer mode | 1 bit | 0x00 (circuit) | v_TransferMode |
| Synchronous/Asynchronous | 1 bit | 0x01 (async) | v_SyncAsync |
| User Rate | 4 bits | 0x05 (9.6K) | v_UserBearerRate |
| Fixed network user rate | 4 bits | 0x00 (FNUR n/a) | v_Fnur |

3.2.5 +CRLP Radio link protocol

| Description | Command | Possible Response(s) |
|-----------------|--|----------------------|
| Select protocol | +CRLP=[<iws>[,<m ws>[,<T1>[,<N2>[,<ver>[,<T4>]]]]]]] | |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|---------------------|---------|---|
| Get current RLP | +CRLP? | +CRLP: <iws>,<mws>,<T1>,<N2>[,<ver1>[,<T4>]] [<CR><LF>+CRLP: <iws>,<mws>,<T1>,<N2>[,<ver2>[,<T4>]] [...]] |
| Get supported types | +CRLP=? | +CRLP: (list of supported <iws>s),(list of supported <mws>s), (list of supported <T1>s),(list of supported <N2>s)[,<ver1> [,(list of supported <T4>s)]] [<CR><LF>+CRLP: (list of supported <iws>s),(list of supported <mws>s),(list of supported <T1>s),(list of supported <N2>s) [,<ver1>[,(list of supported <T4>s)]] [...]] |

Parameters

| <iws> | Description |
|---------|---|
| 0..61 | IWF to MS window size |
| <mws> | Description |
| 0..61 | MS to IWF window size |
| <T1> | Description |
| 44..255 | Acknowledgement timer T1, |
| <N2> | Description |
| 1..255 | Retransmission attempts N2 |
| <ver1> | Description |
| 0 | RLP version |
| <T4> | Description |
| 7 | Re-sequencing period T4 in integer format |

3.2.6 +CR Service reporting

| Description | Command | Possible Response(s) |
|-------------------------------|--------------|----------------------------------|
| Select service reporting mode | +CR=[<mode>] | |
| Get current mode | +CR? | +CR: <mode> |
| Get supported modes | +CR=? | +CR: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|---------|--------------------|
| 0 | Disables reporting |
| 1 | Enables reporting |
| omitted | Use previous value |

3.2.7 +CEER Extended error report

| Description | Command | Possible Response(s) |
|------------------------------|---------|----------------------|
| Get last error report | +CEER | +CEER: <report> |
| Test if command is supported | +CEER=? | |

Parameters

| <report> | Description |
|-------------|---|
| String type | String "CauseSelect: <cs> Cause:<c>" is returned <cs> and <c> are numbers representing the CauseSelect and Cause |

| CauseSelect <cs> | Cause <c> |
|-----------------------|--------------------------------|
| 0 (No cause) | 0 (No cause) |
| 16 (Service provider) | 0 (Unknown) |
| | 1 (Not Allowed) |
| | 2 (No cause) |
| | 6 (Wrong parameter) |
| | 9 (Network access not allowed) |

WISMO218 AT Command Manual

| CauseSelect <cs> | Cause <c> |
|-----------------------|---|
| | 20 (all call instances are used) 21 (ACM over ACM Max) 22 (invalid AOC element) 23 (SIM increase not allowed) 24 (switch off) 25 (Unknown call id) 28 (barred) |
| 65 (Local cause) | 1 (state error) 2 (no call entity) 3 (wrong TI) 6 (DTMF buffer overflow) 7: call disconnected 17 (No cell available) 32 (Local rejection) 33 (PLMN not allowed) 34 (emergency call not possible) 35 (authentication rejected) 36 (network rejection) 37 (LA not allowed) 38 (Local timeout) 39 (server congestion) 40 (local data rejection) 48 (failed replace PDP context) |
| 66 (MM network cause) | See [24.008] |
| 67 (CC network cause) | See [24.008] |
| 69 (RP cause) | See [24.008] |
| 71 (SIM cause) | 0 (Unknown problem) 1 (Memory problem) 2 (File Id not found) 6 (Increase problem) 7 (Technical problem) 11 (Command not allowed) |

| CauseSelect <cs> | Cause <c> |
|------------------|-------------------|
| | 15 (SIM card out) |
| 73 (SM cause) | See [24.008] |

3.2.8 +CRC Cellular result codes

| Description | Command | Possible Response(s) |
|------------------------|---------------|-----------------------------------|
| Select service CR mode | +CRC=[<mode>] | |
| Get current mode | +CRC? | +CRC: <mode> |
| Get supported modes | +CRC=? | +CRC: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|---------|--------------------------|
| 0 | Disables extended format |
| 1 | Enables extended format |
| omitted | Use previous value |

3.2.9 +CVHU Voice Hang-up Control

| Description | Command | Possible Response(s) |
|-----------------------------------|----------------|------------------------------------|
| Select service voice hang up mode | +CVHU=[<mode>] | |
| Get current mode | +CVHU? | +CVHU: <mode> |
| Get supported modes | +CVHU =? | +CVHU: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|---------|--|
| 0 | "Drop DTR" ignored but OK response given. ATH disconnects. |
| 1 | "Drop DTR" and ATH ignored but OK response given |
| 2 | "Drop DTR" behavior according to &D setting. ATH disconnects |
| omitted | Use previous value |

Clarification

If DTR signal is inactive (if DTR is not a pulse), then “Drop DTR” does not respond “OK”.

3.3 Call control result code

3.3.1 +CR Service reporting

| Description | Result code |
|---|-------------|
| Send +CR notification during data call connection | +CR: <serv> |

Parameters

| <serv> | Description |
|-----------|------------------------------|
| ASYNC | Asynchronous transparent |
| SYNC | Synchronous transparent |
| REL ASYNC | Asynchronous non-transparent |
| REL SYNC | Synchronous non-transparent |
| GPRS | GPRS |

3.3.2 +CRING Ring indication

| Description | Result code |
|--|----------------|
| Extended format for incoming call notification | +CRING: <type> |

Parameters

| <type> | Description |
|-----------|------------------------------|
| ASYNC | Asynchronous transparent |
| SYNC | Synchronous transparent |
| REL ASYNC | Asynchronous non-transparent |
| REL SYNC | Synchronous non-transparent |
| FAX | Fax |
| VOICE | Voice call |

| <type> | Description |
|---------------------|---|
| VOICE AUX | Proprietary value for ALS (CPHS Alternate line service) Used in case of incoming on line 2 Refer to *PSALS |
| MULTIMEDIA | Proprietary value. Multimedia call only |
| MULTIMEDIA/FALLBACK | Proprietary value Analog multimedia calls with possible fallback to speech |
| MULTIMEDIA/VOICE | Proprietary value UDI/RDI multimedia calls with possible fallback and service change, multimedia mode preferred |
| VOICE/MULTIMEDIA | Proprietary value UDI/RDI multimedia calls with possible fallback and service change, voice mode preferred. |

Clarification

Optional parameters [,<priority>[,<subaddr>,<satype>]] are not supported in +CRING.

Note: If alternate line service is activated, <type> = "VOICE" if speech call is on line 1 and "VOICE AUX" if call is on line 2.

3.4 Network service related commands

3.4.1 +CNUM Subscriber number

| Description | Command | Possible Response(s) |
|------------------------------|----------|--|
| Get MSISDNs | +CNUM | +CNUM: [<alpha1>],<number1>,<type1>[,<speed>,<service>[,<itc>]] [<CR><LF>+CNUM: [<alpha2>],<number2>,<type2>[,<speed>,<service> [,<itc>]] [...]] |
| Test if command is supported | +CNUM =? | |

Parameters

| <alphax> | Description |
|-------------|---|
| String type | Alphanumeric string associated with <numberx>; used character set should be the one selected with +CSCS |

| <numberx> | Description |
|------------------------|--------------------|
| String type | Phone number |

| <typex> | Description |
|----------------------|--------------------|
| Integer type | Type of address |

| <speed> | Description |
|----------------------|--------------------|
| Integer type | Same as +CBST |

| <service> | Description |
|------------------------|-----------------------------|
| 0 | Asynchronous modem |
| 1 | Synchronous modem |
| 2 | PAD Access (asynchronous) |
| 3 | Packet Access (synchronous) |
| 4 | Voice |
| 5 | Fax |

| <itc> | Description |
|--------------------|--------------------|
| 0 | 3,1 kHz |
| 1 | UDI |

3.4.2 +CREG Network registration

| Description | Command | Possible Response(s) |
|---------------------------------|----------------|---|
| Control +CREG notification | +CREG=[<n>] | |
| Get current registration status | +CREG ? | +CREG: <n>,<stat>[,<lac>,<ci>] +CME ERROR: <err> |
| Get supported values | +CREG =? | +CREG: (list of supported <n>s) |

Parameters

| <n> | Description |
|------------------|---|
| 0 | Disable network registration unsolicited result code |
| 1 | Enable network registration and location information unsolicited result code +CREG: <stat> |
| 2 | Enable network registration and location information unsolicited result code +CREG: <stat>[,<lac>,<ci>] |
| omitted | Use previous value |

| <stat> | Description |
|---------------------|---|
| 0 | not registered, MT is not currently searching a new operator to register to |
| 1 | Registered, home network |
| 2 | Not registered, but MT is currently searching a new operator to register to |
| 3 | Registration denied |
| 4 | Unknown |
| 5 | Registered, roaming |

| <lac> | Description |
|--------------------|---|
| String type | Two byte location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal) |

| <ci> | Description |
|-------------------|--|
| String type | Two byte cell ID in hexadecimal format |

3.4.3 +COPS Operator Selection

| Description | Command | Possible Response(s) |
|-------------------------------|--|---|
| Select operator | +COPS=[<mode>[,<format>[,<oper>[,<AcT>]]]] | +CME ERROR: <err> |
| Get current mode and operator | +COPS? | +COPS: <mode>[,<format>, <oper>[,<AcT>]] +CME ERROR: <err> |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|----------------------|---------|--|
| Get supported values | +COPS=? | +COPS: [list of supported (<stat>,long alphanumeric <oper>,short alphanumeric <oper>,numeric <oper>[,<AcT>])s][,,(list of supported <mode>s),(list of supported <format>s)] +CME ERROR: <err> |

Parameters

| <mode> | Description |
|--------|--|
| 0 | Automatic (<oper> field is ignored) |
| 1 | Manual (<oper> field shall be present, and <AcT> optionally) |
| 3 | set only <format> (for read command +COPS?), do not attempt registration/deregistration (<oper> and <AcT> fields are ignored); this value is not applicable in read command response |
| 4 | Manual/automatic (<oper> field shall be present); if manual selection fails, automatic mode (<mode>=0) is entered |

| <format> | Description |
|-------------|---------------------------------|
| 0 (default) | Long format alphanumeric <oper> |
| 2 | Numeric <oper> |

| <oper> | Description |
|-------------|-------------------|
| String type | Refer to [27.007] |

| <AcT> | Description |
|-------|-------------|
| 0 | GERAN |
| 2 | UTRAN |

| <stat> | Description |
|--------|-------------|
| 0 | Unknown |
| 1 | Available |

| <stat> | Description |
|--------|-------------|
| 3 | Current |
| 4 | Forbidden |

Clarification

When Manual/automatic operator selection is requested (<mode>=4), +COPS will return <mode>=0 or <mode>=1 depending which registration mode was successful (<mode>=4 will not be returned)

If set command is aborted, an abort of the registration on going is requested.

If test command is aborted, get available PLMN procedure is aborted, a partial list of PLMN is returned.

3.4.4 +CLCK Facility lock

| Description | Command | Possible Response(s) |
|----------------------------|---|---|
| Execute facility operation | +CLCK=<fac>,<mode>[,<passwd>[,<class>]] | when <mode>=2 and command successful: +CLCK:<status>[,<class1>[<CR><LF>+CLCK:<status>,<class2>[...]]] +CME ERROR: <err> |
| Get supported values | +CLCK=? | +CLCK: (list of supported <fac>s) +CME ERROR: <err> |

Parameters

| <fac> | Description |
|-------|---|
| SC | SIM (lock SIM/UICC card) (SIM/UICC asks password in MT power-up and when this lock command issued) Correspond to PIN1 code |
| AO | BAOC (Barr All Outgoing Calls) |
| OI | BOIC (Barr Outgoing International Calls) |
| OX | BOIC-exHC (Barr Outgoing International Calls except to Home Country) |
| AI | BAIC (Barr All Incoming Calls) |
| IR | BIC-Roam (Barr Incoming Calls when Roaming outside the home country) |
| AB | All Barring services |

WISMO218 AT Command Manual

| <fac> | Description |
|--------------------|--|
| FD | SIM card or active application in the UICC (GSM or USIM) fixed dialling memory feature (if PIN2 authentication has not been done during the current session, PIN2 is required as <passwd>) |
| PN | Network Personalization Correspond to NCK code |
| PU | Network sUset Personalization Correspond to NSCK code |
| PP | Service Provider Personalization Correspond to SPCK code |
| AC | All inComing barring services |
| AG | All outGoing barring services |

| <mode> | Description |
|---------------------|--------------------|
| 0 | Unlock |
| 1 | Lock |
| 2 | Query status |

| <passwd> | Description |
|-----------------------|---|
| String type | Shall be the same as password specified for the facility from the MT user interface or with command Change Password +CPWD |

| <class> | Description |
|----------------------|---|
| 1 | Voice (telephony) |
| 2 | data (refers to all bearer services; with <mode>=2 this may refer only to some bearer service if TA does not support values 16, 32, 64 and 128) |
| 4 | Fax (facsimile services) |
| 7 | 1+2+4 |

| <status> | Description |
|-----------------------|--------------------|
| 0 | Not active |
| 1 | Active |

Restriction

If SAT call control modifies the SS an error is return to the TE.

3.4.5 +CPWD Change password

| Description | Command | Possible Response(s) |
|----------------------|-------------------------------|--|
| Set new password | +CPWD=<fac>,<oldpwd>,<newpwd> | +CME ERROR: <err> |
| Get supported values | + CPWD =? | +CPWD: list of supported (<fac>,<pwdlength>)s +CME ERROR: <err> |

Parameters

| <fac> | Description |
|--|---|
| P2 | SIM PIN2 |
| AO or OI or OX or AI or IR or AB or SC | Refer Facility Lock +CLCK for description |

| <oldpwd> <newpwd> | Description |
|----------------------|--|
| String type | <oldpwd> shall be the same as password specified for the facility from the MT user interface or with command Change Password +CPWD and <newpwd> is the new password; maximum length of password can be determined with <pwdlength> |

| <pwdlength> | Description |
|--------------|---|
| Integer type | Maximum length of the password for the facility |

3.4.6 +CLIP Calling line identification presentation

| Description | Command | Possible Response(s) |
|----------------------------|-------------|---------------------------------|
| Control +CLIP notification | +CLIP=[<n>] | |
| Get status of CLI | +CLIP? | +CLIP: <n>, <m> |
| Get supported values | +CLIP=? | +CLIP: (list of supported <n>s) |

Parameters

| <n> | Description |
|------------------|----------------------------|
| 0 | Disable +CLIP notification |
| 1 | Enable +CLIP notification |

| <m> | Description |
|------------------|---------------------------------|
| 0 | CLIP not provisioned |
| 1 | CLIP provisioned |
| 2 | Unknown (e.g. no network, etc.) |

3.4.7 +CLIR Calling line identification restriction

| Description | Command | Possible Response(s) |
|----------------------|----------------|---------------------------------|
| Control +CLIR | +CLIR=[<n>] | |
| Get status of CLIR | +CLIR? | +CLIR: <n>, <m> |
| Get supported values | +CLIR=? | +CLIR: (list of supported <n>s) |

Parameters

| <n> | Description |
|------------------|--|
| 0 | Presentation indicator is used according to the subscription of the CLIR service |
| 1 | CLIR invocation |
| 2 | CLIR suppression |

| <m> | Description |
|------------------|---|
| 0 | CLIR not provisioned |
| 1 | CLIR provisioned in permanent mode |
| 2 | Unknown (e.g. no network, etc.) |
| 3 | CLIR temporary mode presentation restricted |
| 4 | CLIR temporary mode presentation allowed |

3.4.8 +COLP Connected line identification presentation

| Description | Command | Possible Response(s) |
|----------------------------|-------------|---------------------------------|
| Control +COLP notification | +COLP=[<n>] | |
| Get status of COLP | +COLP? | +COLP: <n>, <m> |
| Get supported values | +COLP=? | +COLP: (list of supported <n>s) |

Parameters

| <n> | Description |
|-----|----------------------------|
| 0 | Disable +COLP notification |
| 1 | Enable +COLP notification |

| <m> | Description |
|-----|---------------------------------|
| 0 | COLP not provisioned |
| 1 | COLP provisioned |
| 2 | Unknown (e.g. no network, etc.) |

3.4.9 +CCFC Call forwarding number and conditions

| Description | Command |
|----------------------------|--|
| Control +COLP notification | +CCFC=<reason>,<mode>[,<number>[,<type>[,<class>[,<subaddr>[,<satype>[,< |
| Get supported values | +CCFC=? |

Parameters

| <reason> | Description |
|----------|---------------|
| 0 | Unconditional |
| 1 | Mobile busy |
| 2 | No reply |
| 3 | Not reachable |

WISMO218 AT Command Manual

| <reason> | Description |
|-----------------------|---------------------------------|
| 4 | All call forwarding |
| 5 | All conditional call forwarding |

| <mode> | Description |
|---------------------|--------------------|
| 0 | Disable |
| 1 | Enable |
| 2 | Query status |
| 3 | Registration |
| 4 | Erasure |

| <number> | Description |
|-----------------------|--|
| String type | Phone number of forwarding address in format specified by <type> |

| <type> | Description |
|---------------------|--------------------|
| Integer type | Type of address |

| <subaddr> | Description |
|------------------------|--|
| String type | subaddress of format specified by <satype> |

| <satype> | Description |
|-----------------------|--------------------|
| Integer type | Type of subaddress |

| <class> | Description |
|----------------------|---|
| 1 | Voice (telephony) |
| 2 | data (refers to all bearer services; with <mode>=2 this may refer only to some bearer service if TA does not support values 16, 32, 64 and 128) |
| 4 | Fax (facsimile services) |
| 7 (Default) | 1+2+4 |

| <time> | Description |
|--------|--|
| 1..30 | When "no reply" is enabled or queried, this gives the time in seconds to wait before call is forwarded Default value 20 |

| <status> | Description |
|----------|-------------|
| 0 | Not active |
| 1 | Active |

Restriction

If SAT call control modifies the SS an error is return to the TE.

3.4.10 +CCWA Call waiting

| Description | Command | Possible Response(s) |
|----------------------|--------------------------------|---|
| Control call waiting | +CCWA=[<n>[,<mode>[,<class>]]] | when <mode>=2 and command successful: +CCWA:<status>,<class1>[<CR><LF>+CCWA:<status>,<class2> [...]] |
| Get current mode | +CCWA? | +CCWA: <n> |
| Get supported values | +CCWA=? | +CCFC: (list of supported <reason>s) |

Parameters

| <n> | Description |
|-----|-------------------------------|
| 0 | Disable presentation of +CCWA |
| 1 | Enable presentation of +CCWA |

| <mode> | Description |
|--------|--------------|
| 0 | Disable |
| 1 | Enable |
| 2 | Query status |

| <class> | Description |
|----------------|---|
| 1 | Voice (telephony) |
| 2 | data (refers to all bearer services; with <mode>=2 this may refer only to some bearer service if TA does not support values 16, 32, 64 and 128) |
| 4 | Fax (facsimile services) |
| 7 (Default) | 1+2+4 |

| <status> | Description |
|----------|-------------|
| 0 | Not active |
| 1 | Active |

3.4.11 +CHLD Call related supplementary services

| Description | Command | Possible Response(s) |
|-------------------------------|-------------|-----------------------------------|
| Control call related services | +CHLD=[<n>] | +CME ERROR: <err> |
| Get supported values | +CHLD=? | [+CHLD: (list of supported <n>s)] |

Parameters

| <n> | Description |
|-----|--|
| 0 | Releases all held calls or sets User Determined User Busy (UDUB) for a waiting call. |
| 1 | Releases all active calls (if any exist) and accepts the other (held or waiting) call. |
| 1x | Releases a specific active call x |
| 2 | Places all active calls (if any exist) on hold and accepts the other (held or waiting) call. |
| 2x | Places all active calls on hold except call X with which communication shall be supported. |
| 3 | Adds a held call to the conversation. |
| 4 | Connects the two calls and disconnects the subscriber from both calls (ECT) |

| <n> | Description |
|-----|---|
| 6 | Proprietary value Swap operation (retrieves the held call and holds the active call). Not applicable for calls engaged in a multiparty operation (+CME ERROR returned) |
| 6x | Proprietary value Retrieves the specified held call x. Not applicable for calls engaged in a multiparty operation (+CME ERROR returned) |
| 7x | Proprietary value Holds the specified active call x. Not applicable for calls engaged in a multiparty operation (+CME ERROR returned) |
| 8x | Proprietary value Releases the specified call x (whatever its state). |
| 9x | Proprietary value Aborts MO speech call x setup without releasing other calls. Possible if OK result code is sent before call is connected: allowed if *PSCSSC mode = enabled and +COLP = disabled. |

3.4.12 +CTFR Call deflection

| Description | Command | Possible Response(s) |
|------------------------------|--|----------------------|
| Deflect a MT call | +CTFR=<number>[,<type>[,<subaddr>[,<satype>]]] | +CME ERROR:<err> |
| Test if command is supported | +CTFR=? | |

Parameters

| <number> | Description |
|-------------|--------------|
| String type | Phone number |

| <type> | Description |
|--------------|-----------------|
| Integer type | Type of address |

| <subaddr> | Description |
|-------------|--|
| String type | subaddress of format specified by <satype> |

| <satype> | Description |
|--------------|--------------------|
| Integer type | Type of subaddress |

3.4.13 +CUSD Unstructured supplementary service data

| Description | Command | Possible Response(s) |
|----------------------|-----------------------------|---------------------------------|
| Control USSD | +CUSD=[<n>[,<str>[,<dcs>]]] | +CME ERROR: <err> |
| Get current mode | +CUSD? | +CUSD: <n> |
| Get supported values | +CUSD=? | +CUSD: (list of supported <n>s) |

Parameters

| <n> | Description |
|-----|--|
| 0 | Disable the result code presentation to the TE |
| 1 | Enable the result code presentation to the TE |
| 2 | Cancel session (not applicable to read command response) |

| <str> | Description |
|-------------|-------------|
| String type | USSD-string |

| <dcs> | Description |
|--------------|---|
| Integer type | Cell Broadcast Data Coding Scheme Default value: 0 |

Restriction

If SAT call control modifies the USSD an error is return to the TE.

Clarification

When TE sends an USSD to the network, the OK result code is sent before the response of the network. When network answers, the response will be sent as an URC (as if it was a network initiated operation, in case of error +CUSD: 4 will be sent).

This allows the link not to be blocked for a long time (the network can take a long time to answer a USSD request initiated by the TE).

The USSD session can be aborted using command at+cusd=2.

3.4.14 +CAOC Advice of Charge

| Description | Command | Possible Response(s) |
|--------------------------|----------------|--------------------------------------|
| Control AOC notification | +CAOC[=<mode>] | [+CAOC: <ccm>] +CME ERROR: <err> |
| Get current mode | +CAOC? | +CAOC: <mode> |
| Get supported values | +CAOC=? | [+CAOC: (list of supported <mode>s)] |

Parameters

| <mode> | Description |
|--------|---|
| 0 | query CCM value |
| 1 | Deactivate the unsolicited reporting of CCM value |
| 2 | Activate the unsolicited reporting of CCM value |

| <ccm> | Description |
|-------------|---|
| String type | Three bytes of the current call meter value in hexadecimal format (e.g. "00001E" indicates decimal value 30); value is in home units and bytes are similarly coded as ACMmax value in the SIM card or in the active application in the UICC (GSM or USIM) |

3.4.15 +CSSN Supplementary service notifications

| Description | Command | Possible Response(s) |
|-------------------------|-------------------|--|
| SS notification control | +CSSN=[<n>[,<m>]] | |
| Get current mode | +CSSN? | +CSSN: <n>,<m> |
| Get supported values | +CSSN=? | +CSSN: (list of supported <n>s),(list of supported <m>s) |

Parameters

| <n> | Description |
|-------------|-------------------------------|
| 0 (default) | Disable presentation of +CSSI |
| 1 | Enable presentation of +CSSI |

| <m> | Description |
|------------------|-------------------------------|
| 0 (default) | Disable presentation of +CSSU |
| 1 | Enable presentation of +CSSU |

3.4.16 +CLCC List current calls

| Description | Command | Possible Response(s) |
|------------------------------|----------------|---|
| SS notification control | +CLCC | [+CLCC: <id1>,<dir>,<stat>,<mode>,<mpty>[,<number>,<type>[,<alpha>]][<CR><LF>]+CLCC: <id2>,<dir>,<stat>,<mode>,<mpty>[,<number>,<type>[,<alpha>]][...]]] +CME ERROR: <err> |
| Test if command is supported | +CLCC=? | |

Parameters

| <idx> | Description |
|--------------------|---|
| 1..7 | Call identification number This number can be used in +CHLD command operations |

| <dir> | Description |
|--------------------|-----------------------------|
| 0 | Mobile originated (MO) call |
| 1 | Mobile terminated (MT) call |

| <stat> | Description |
|---------------------|--------------------|
| 0 | Active |
| 1 | Held |
| 2 | Dialing (MO call) |
| 3 | Alerting (MO call) |
| 4 | Incoming (MT call) |
| 5 | Waiting (MT call) |

| <mode> | Description |
|--------|-------------|
| 0 | Voice |
| 1 | Data |
| 2 | Fax |

| <mpty> | Description |
|--------|---|
| 0 | Call is not one of multiparty (conference) call parties |
| 1 | Call is one of multiparty (conference) call parties |

| <number> | Description |
|-------------|--------------|
| String type | Phone number |

| <type> | Description |
|--------------|-----------------|
| Integer type | Type of address |

| <Alpha> | Description |
|-------------|---|
| String type | Alphanumeric representation of <number> corresponding to the entry found in phonebook; used character set should be the one selected with +CSCS |

3.4.17 +CPOL Preferred PLMN list

| Description | Command | Possible Response(s) |
|---|---|--|
| Write an entry in list of preferred PLMNs | +CPOL=[<index>][,<format>[,<oper>[,<GSM_AcT>,<GSM_Compact_AcT>,<UTRAN_AcT>]]] | +CME ERROR: <err> |
| List all entries | +CPOL? | +CPOL: <index1>,<format>,<oper1>[,<GSM_AcT1>,<GSM_Compact_AcT1>,<UTRAN_AcT1>][<CR><LF>]+CPOL: <index2>,<format>,<oper2>[,<GSM_AcT2>,<GSM_Compact_AcT2>,<UTRAN_AcT2>][...] +CME ERROR: <err> |
| Get supported values | +CPOL=? | +CPOL: (list of supported <index>s),(list of supported <format>s) +CME ERROR: <err> |

Parameters

| <index> | Description |
|--------------------|---|
| Integer type | The order number of operator in the SIM/USIM preferred operator list |
| <format> | Description |
| 0 | Long format alphanumeric <oper> |
| 1 | Short format alphanumeric <oper> |
| 2 | Numeric <oper> |
| <opern> | Description |
| String type | <format> indicates if the format is alphanumeric or numeric (see +COPS) |
| <GSM_AcTn> | Description |
| 0 | Access technology not selected |
| 1 | Access technology selected |
| <GSM_Compact_AcTn> | Description |
| 0 | Access technology not selected |
| <UTRAN_AcTn> | Description |
| 0 | Access technology not selected |
| 1 | Access technology selected |

Clarification

Note: <GSM_AcT>, <GSM_Compact_AcT> and <UTRAN_AcT> appears in 27.007 Release 5.

3.4.18 +CPLS Selection of preferred PLMN list

| Description | Command | Possible Response(s) |
|--|--------------|---|
| Select the list of preferred PLMN for CPOL | +CPLS=<list> | +CME ERROR: <err> |
| Get current list | +CPLS? | +CPLS: <list> +CME ERROR: <err> |
| Get supported values | +CPLS=? | +CPLS: (list of supported <list>s) +CME ERROR: <err> |

Parameters

| <list> | Description |
|--------|---|
| 0 | User controlled PLMN selector with Access Technology EFPLMNwAcT, if not found in the SIM/UICC then PLMN preferred list EFPLMNsSel (this file is only available in SIM card or GSM application selected in UICC) |
| 1 | Operator controlled PLMN selector with Access Technology EFOPLMNwAcT |

Clarification

Note: This command appears in 27.007 Release 5, but SIM files EFPLMNwAcT, EFOPLMNwAcT exists in Release 99.

3.4.19 +COPN Read operator names

| Description | Command | Possible Response(s) |
|------------------------------|---------|---|
| Get list of operator name | +COPN | +COPN: <numeric1>,<alpha1>[<CR><LF>+COPN:<numeric2>,<alpha2>[...]] +CME ERROR: <err> |
| Test if command is supported | +COPN=? | |

Parameters

| <numericaln> | Description |
|--------------|--|
| String type | Operator in numeric format (see +COPS) |

| <alphan> | Description |
|-------------|--|
| String type | Operator in long alphanumeric format (see +COPS) |

3.5 Network service related result codes

3.5.1 +CREG Network registration

| Description | Result code |
|--|----------------------------|
| Network registration status change event | +CREG: <stat>[,<lac>,<ci>] |

Parameters

Refer to +CREG command description.

3.5.2 +CLIP Calling Line Identification Presentation

| Description | Result code |
|--|---|
| Calling Line Identification Presentation | +CLIP: <number>,<type>[,<subaddr>,<satype>[,<alpha>][,<CLI validity>]]] |

Parameters

| <number> | Description |
|--------------|--|
| String type | Phone number |
| <type> | Description |
| Integer type | Type of address |
| <subaddr> | Description |
| String type | subaddress of format specified by <satype> |
| <satype> | Description |
| Integer type | Type of subaddress |

| <Alpha> | Description |
|----------------------|---|
| String type | Alphanumeric representation of <number> corresponding to the entry found in phonebook; used character set should be the one selected with +CSCS |

| <CLI validation> | Description |
|-------------------------------|---|
| 0 | CLI valid |
| 1 | CLI has been withheld by the originator |
| 2 | CLI is not available due to interworking problems or limitations of originating network |

3.5.3 +COLP Connected line identification presentation

| Description | Result code |
|--|---|
| Connected Line Identification Presentation | +COLP: <number>,<type> [,<subaddr>,<satype> [,<alpha>]] |

Parameters

| <number> | Description |
|-----------------------|--------------------|
| String type | Phone number |

| <type> | Description |
|---------------------|--------------------|
| Integer type | Type of address |

| <subaddr> | Description |
|------------------------|--|
| String type | subaddress of format specified by <satype> |

| <satype> | Description |
|-----------------------|--------------------|
| Integer type | Type of subaddress |

| <alpha> | Description |
|----------------------|---|
| String type | Alphanumeric representation of <number> corresponding to the entry found in phonebook; used character set should be the one selected with +CSCS |

3.5.4 +CCWA Calling Line Identification Presentation

| Description | Result code |
|---------------------------|---|
| Call waiting notification | +CCWA: <number>,<type>,<class>,[<alpha>][,<CLI validity>[,<subaddr>,<satype>]] |

Parameters

| <number> | Description |
|------------------------|---|
| String type | Phone number |
| <type> | Description |
| Integer type | Type of address |
| <subaddr> | Description |
| String type | subaddress of format specified by <satype> |
| <satype> | Description |
| Integer type | Type of subaddress |
| <Alpha> | Description |
| String type | Alphanumeric representation of <number> corresponding to the entry found in phonebook; used character set should be the one selected with +CSCS |
| <class> | Description |
| 1 | Voice (telephony) |

| <class> | Description |
|----------------|---|
| 2 | data (refers to all bearer services; with <mode>=2 this may refer only to some bearer service if TA does not support values 16, 32, 64 and 128) |
| 4 | Fax (facsimile services) |
| 7 (Default) | 1+2+4 |

| <CLI validation> | Description |
|------------------|---|
| 0 | CLI valid |
| 1 | CLI has been withheld by the originator |
| 2 | CLI is not available due to interworking problems or limitations of originating network |

3.5.5 +CUSD Unstructured supplementary service data

| Description | Result code |
|--|--------------------------|
| USSD response from the network, or network initiated operation | +CUSD: <m>[,<str>,<dcs>] |

Parameters

| <n> | Description |
|-----|--|
| 0 | No further user action required (network initiated USSD Notify, or no further information needed after mobile initiated operation) |
| 1 | Further user action required (network initiated USSD Request, or further information needed after mobile initiated operation) |
| 2 | USSD terminated by network |
| 4 | Operation not supported |
| 5 | Network time out |

| <str> | Description |
|-------------|-------------|
| String type | USSD-string |

| <dcs> | Description |
|--------------|---|
| Integer type | Cell Broadcast Data Coding Scheme Default value: 0 |

Clarification

Refer to +CUSD command description.

3.5.6 +CCCM Current Call Meter

| Description | Result code |
|-------------|--------------|
| CCM value | +CCCM: <ccm> |

Parameters

| <ccm> | Description |
|-------------|---|
| String type | Three bytes of the current call meter value in hexadecimal format (e.g. "00001E" indicates decimal value 30); value is in home units and bytes are similarly coded as ACMmax value in the SIM card or in the active application in the UICC (GSM or USIM) |

Clarification

This unsolicited result code is sent whenever the CCM value changes, but not more than once every 10s. This URC is activated when CAOC is in mode 2.

3.5.7 +CSSI Supplementary service notifications

| Description | Result code |
|-----------------------------|----------------|
| SS notification for MO call | +CSSI: <code1> |

Parameters

| <code1> | Description |
|---------|---|
| 0 | Unconditional call forwarding is active |
| 1 | Some of the conditional call forwardings are active |
| 2 | Call has been forwarded |
| 3 | Call is waiting |
| 5 | Outgoing calls are barred |
| 6 | Incoming calls are barred |

| <code1> | Description |
|---------|---------------------------|
| 7 | CLIR suppression rejected |
| 8 | Call has been deflected |

3.5.8 +CSSU Supplementary service notifications

| Description | Result code |
|-----------------|----------------|
| SS notification | +CSSU: <code2> |

Parameters

| <code2> | Description |
|---------|--|
| 0 | This is a forwarded call (MT call setup) |
| 2 | Call has been put on hold (during a voice call) |
| 3 | Call has been retrieved (during a voice call) |
| 4 | Multiparty call entered (during a voice call) |
| 5 | Call on hold has been released (this is not a SS notification) (during a voice call) |
| 7 | Call is being connected (alerting) with the remote party in alerting state in explicit call transfer operation (during a voice call) |
| 8 | Call has been connected with the other remote party in explicit call transfer operation (during a voice call or MT call setup) |
| 9 | This is a deflected call (MT call setup) |

3.6 Control and status commands

3.6.1 +CPAS Phone activity status

| Description | Command | Possible Response(s) |
|----------------------|---------|--|
| Get activity status | +CPAS | +CPAS: <pas> +CME ERROR: <err> |
| Get supported values | +CPAS=? | +CPAS: (list of supported <pas>s) +CME ERROR: <err> |

Parameters

| <pas> | Description |
|-------|---|
| 0 | Ready (MT allows commands from TA/TE) |
| 2 | Unknown (MT is not guaranteed to respond to instructions) |
| 3 | Ringing (MT is ready for commands from TA/TE, but the ringer is active) |
| 4 | Call in progress (MT is ready for commands from TA/TE, but a call is in progress) |

3.6.2 +CFUN Set phone functionality

| Description | Command | Possible Response(s) |
|-----------------------------------|-----------------------|---|
| Select the level of functionality | +CFUN=[<fun>[,<rst>]] | +CME ERROR: <err> |
| Get current level | +CFUN? | +CFUN: <fun> +CME ERROR: <err> |
| Get supported values | +CFUN=? | +CFUN: (list of supported <fun>s), (list of supported <rst>s) +CME ERROR: <err> |

Parameters

| <fun> | Description |
|---------|---|
| 1 | Full functionality |
| 4 | Disable phone both transmit and receive RF circuits |
| omitted | Use previous value |

| <rst> | Description |
|-------------|--|
| 0 (default) | Do not reset the MT before setting it to <fun> power level |
| 1 | Reset the MT before setting it to <fun> power level |

Clarification

AT+CFUN=1,1 generates a blocking defense to reset the mobile. "OK" result code will appear after reset has been completed. (AT+CFUN=1,1 has no effect on radio on/off, it leaves it as the same state it was before reset).

AT+CFUN=1,0 request a radio on and memorize in non-volatile memory <fun> level.

AT+CFUN=4,0 request a radio off and memorize in non-volatile memory <fun>

level.

At next switch on, ME will be started with the <fun> level of the last +CFUN (i.e. radio on or off). This allows TE to have control on radio on/off.

3.6.3 +CPIN Enter PIN

| Description | Command | Possible Response(s) |
|---------------------------------|------------------------|------------------------------------|
| Send password to MT | +CPIN=<pin>[,<newpin>] | +CME ERROR: <err> |
| Check if a password is expected | +CPIN? | +CPIN: <code> +CME ERROR: <err> |
| Test if command is supported | +CPIN=? | |

Parameters

| <code> | Description |
|---------------|--|
| READY | MT is not pending for any password |
| SIM PIN | MT is waiting SIM PIN to be given |
| SIM PUK | MT is waiting SIM PUK to be given |
| SIM PIN2 | MT is waiting SIM PIN2 to be given This <code> is returned only when the last executed command resulted in PIN2 authentication failure (i.e. +CME ERROR: 17). If PIN2 is not entered right after the failure, MT does not block its operation |
| SIM PUK2 | MT is waiting SIM PUK2 to be given This <code> is returned only when the last executed command resulted in PUK2 authentication failure (i.e. +CME ERROR: 18). If PUK2 and new PIN2 are not entered right after the failure, MT does not block its operation |
| PH-NET PIN | MT is waiting network personalization password to be given Correspond to NCK code |
| PH-NETSUB PIN | MT is waiting network subset personalization password to be given Correspond to NSCK code |
| PH-SP PIN | MT is waiting service provider personalization password to be given Correspond to SPCK code |
| PH-CORP PIN | MT is waiting corporate personalization password to be given Correspond to CCK code |

Clarification

When the pin code is required, the error result code is a CMS ERROR for the AT

commands that belong to the 27.005 and a CME ERROR for all the other AT commands

3.6.4 +CPWC Power class

| Description | Command | Possible Response(s) |
|---|--------------------------|---|
| Set power class for corresponding band | +CPWC=[<class>[,<band>]] | +CME ERROR: <err> |
| Get the list of current and default power class for each supported band | +CPWC? | +CPWC: <curr_class1>,<def_class1>,<band1> [,<curr_class2>,<def_class2>,<band2> [...]] +CME ERROR: <err> |
| Get supported values | +CPWC=? | +CPWC: list of supported (<band>,(list of <class>s)) pairs +CME ERROR: <err> |

Parameters

| | Description |
|--|--|
| <class> <curr_classn>s <def_classn>s | |
| Integer type | 0 default (not applicable to <curr_class>s or <def_classn>s) 1... MT output power class as in GSM 45.005 [38] |

| | Description |
|---------------------|---|
| <class> <bandn>s | |
| Integer type | Frequency band, one of the following : 0 GSM900 1 GSM1800 2 GSM1900 3 GSM 400 |

3.6.5 +CSQ Signal Quality

| Description | Command | Possible Response(s) |
|------------------------|---------|---|
| Get signal information | +CSQ | +CSQ: <rssi>,<ber> +CME ERROR: <err> |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|----------------------|---------|--|
| Get supported values | +CSQ=? | +CSQ: (list of supported <rssi>s),(list of supported <ber>s) |

Parameters

| <rssi> | Description |
|--------|---|
| 0..31 | From -113 dBm or less to -51 dBm or greater |
| 99 | Not known or not detectable |

| <ber> | Description |
|-------|---|
| 0..7 | As RXQUAL values in the table in TS 45.008 [20] subclause 8.2.4 |
| 99 | Not known or not detectable |

Clarification

The <ber> is provided only in online mode.

3.6.6 +CMEC Mobile Termination control mode

| Description | Command | Possible Response(s) |
|----------------------|---------------------------------|---|
| Select equipment | +CMEC=[<keyp>[,<disp>[,<ind>]]] | +CME ERROR: <err> |
| Get current settings | +CMEC? | +CMEC:<keyp>,<disp>,<ind> |
| Get supported values | +CMEC=? | +CMEC: (list of supported <keyp>s),(list of supported <disp>s),(list of supported <ind>s) |

Parameters

| <keyp> | Description |
|--------|--|
| 0 | MT can be operated only through its keypad (execute command of +CKPD cannot be used) |

| <disp> | Description |
|--------|---|
| 0 | Only MT can write to its display (command +CDIS can only be used to read the display) |

| <ind> | Description |
|--------------------|--|
| 0 | Only MT can set the status of its indicators (command +CIND can only be used to read the indicators) |

3.6.7 +CIND Indicator control

| Description | Command | Possible Response(s) |
|-------------------------|-----------------------------|--|
| Set MT indicators | +CIND=[<ind>[,<ind>[,...]]] | +CME ERROR: <err> |
| Get MT indicator status | +CIND? | +CIND: <ind>[,<ind>[,...]] +CME ERROR: <err> |
| Get supported values | +CIND=? | +CIND: (<descr>,(list of supported <ind>s)) [,(<descr>,(list of supported <ind>s))[,...]] +CME ERROR: <err> |

Parameters

| <ind> | Description |
|--------------------|--------------------------------|
| Integer type | Range of corresponding <descr> |

| <descr> | Description |
|----------------------|---|
| “battchg” | Battery charge level (0..5) |
| “signal” | Signal quality (0..5) |
| “service” | Service availability (0..1) |
| “message” | Message received (0..1) |
| “call” | Call in progress (0..1) |
| “roam” | Roaming indicator (0..1) |
| “smsfull” | A short message memory storage in the MT has become full (1), or memory locations are available (0) |

Restriction

It is impossible to set indicator controls.

3.6.8 +CMER Mobile Termination event reporting

| Description | Command | Possible Response(s) |
|---------------------------|--|--|
| Control URC notifications | +CMER=[<mode>[,<keyp>[,<disp>[,<ind>[,<bfr>]]]]] | +CME ERROR: <err> |
| Get current settings | +CMER? | +CMER: <mode>,<keyp>,<disp>,<ind>,<bfr> |
| Get supported values | +CMER=? | +CMER: (list of supported <mode>s),(list of supported <keyp>s),(list of supported <disp>s),(list of supported <ind>s),(list of supported <bfr>s) |

Parameters

| <mode> | Description |
|---------|--|
| 0 | Buffer unsolicited result codes in the TA; if TA result code buffer is full, codes can be buffered in some other place or the oldest ones can be discarded |
| 1 | Discard unsolicited result codes when TA TE link is reserved (e.g. in on line data mode); otherwise forward them directly to the TE |
| omitted | Use previous value |

| <keyp> | Description |
|--------|---------------------------|
| 0 | No keypad event reporting |

| <disp> | Description |
|--------|----------------------------|
| 0 | No display event reporting |

| <ind> | Description |
|-------------|------------------------------|
| 0 (default) | No indicator event reporting |

| <ind> | Description |
|-------|---|
| 1 | Indicator event reporting using result code +CIEV: <ind>,<value>. <ind> indicates the indicator order number (as specified for +CIND) and <value> is the new value of indicator. |
| 2 | Indicator event reporting using result code +CIEV: <ind>,<value>. All indicator events shall be directed from TA to TE |

| <bfr> | Description |
|-------|---|
| 0 | TA buffer of unsolicited result codes defined within this command is cleared when <mode> 1...3 is entered |

3.6.9 +CPBS Select phonebook memory storage

| Description | Command | Possible Response(s) |
|-----------------------------------|-----------------|---|
| Select phonebook memory storage | +CPBS=<storage> | +CME ERROR: <err> |
| Get current memory storage status | +CPBS? | +CPBS: <storage>[,<used>,<total>] +CME ERROR: <err> |
| Get supported storages | +CPBS=? | +CPBS: (list of supported <storage>s) |

Parameters

| <storage> | Description |
|-----------|---|
| DC | MT dialled calls list (+CPBW may not be applicable for this storage) |
| EN | SIM/USIM (or MT) emergency number (+CPBW is not be applicable for this storage) |
| FD | SIM/USIM fixed dialling phonebook. If a SIM card is present or if a UICC with an active GSM application is present, the information in EFFDN under DFTelecom is selected. If a UICC with an active USIM application is present, the information in EFFDN under ADFUSIM is selected. |
| MC | MT missed (unanswered received) calls list (+CPBW may not be applicable for this storage) |

WISMO218 AT Command Manual

| <storage> | Description |
|------------------------|--|
| ON | SIM (or MT) own numbers (MSISDNs) list (reading of this storage may be available through +CNUM also). When storing information in the SIM/UICC, if a SIM card is present or if a UICC with an active GSM application is present, the information in EFMSISDN under DFTelecom is selected. If a UICC with an active USIM application is present, the information in EFMSISDN under ADFUSIM is selected. |
| RC | MT received calls list (+CPBW may not be applicable for this storage) |
| SM (default) | SIM/UICC phonebook. If a SIM card is present or if a UICC with an active GSM application is present, the EFADN under DFTelecom is selected. If a UICC with an active USIM application is present, the global phonebook, DFPHONEBOOK under DFTelecom is selected. |
| AP | Selected application phonebook. If a UICC with an active USIM application is present, the application phonebook, DFPHONEBOOK under ADFUSIM is selected |

| <used> | Description |
|---------------------|--|
| Integer type | Value indicating the number of used locations in selected memory |

| <total> | Description |
|----------------------|---|
| Integer type | Value indicating the total number of locations in selected memory |

Clarification

"SM" corresponds to SIM/UICC phonebook (global phonebook) If a SIM card is present or if a UICC with an active GSM application is present, the EFADN under DFTelecom is selected. If a UICC with an active USIM application is present, the global phonebook, DFPHONEBOOK under DFTelecom is selected.

"AP" corresponds to selected application phonebook (local phonebook). If a UICC with an active USIM application is present, the application phonebook, DFPHONEBOOK under ADFUSIM is selected.

3.6.10 +CPBR Read phonebook entries

| Description | Command | Possible Response(s) |
|---------------------|---------------------------|--|
| Read entries | +CPBR=<index1>[,<index2>] | [+CPBR: <index1>,<number>,<type>,<text>[,<hidden>][,<group>][,<adnumber>][,<adtype>][,<secondtext>][,<email>]] [[...]] <CR><LF>+CPBR:<index2>,<number>,<type>,<text>[,<hidden>][,<group>][,<adnumber>][,<adtype>][,<secondtext>][,<email>]] +CME ERROR: <err> |
| Get location ranges | +CPBR=? | +CPBR: (list of supported<index>s),[<nlength>],[<tlength>],[<glength>],[<slength>],[<elength>] +CME ERROR: <err> |

Parameters

| <indexn> | Description |
|--------------|---|
| Integer type | Values in the range of location numbers of phonebook memory |
| <number> | Description |
| String type | Phone number of format <type> |
| <type> | Description |
| Integer type | Type of address |
| <text> | Description |
| String type | Field of maximum length <tlength>; Character set as specified by +CSCS |
| <hidden> | Description |
| 0 | Phonebook entry not hidden |
| 1 | Phonebook entry hidden |

| <group> | Description |
|---------------------------|---|
| String type | Field of maximum length <glength>; Character set as specified by +CSCS |
| <adnumber> | Description |
| String type | Field of maximum length <slength>; Character set as specified by +CSCS |
| <adtype> | Description |
| Integer type | Type of address |
| <secondtext> | Description |
| String type | Field of maximum length <slength>; Character set as specified by +CSCS |
| <email> | Description |
| String type | Field of maximum length <elength>; Character set as specified by +CSCS |
| <nlength> | Description |
| Integer type | Value indicating the maximum length of field <number> |
| <tlength> | Description |
| Integer type | Value indicating the maximum length of field <text> |
| <glength> | Description |
| Integer type | Value indicating the maximum length of field <group> |
| <slength> | Description |
| Integer type | Value indicating the maximum length of field <secondtext> |

| <elength> | Description |
|--------------|--|
| Integer type | Value indicating the maximum length of field <email> |
| <oper> | Description |
| String type | Refer to [27.007] |

Clarification

Only first <group>, <adnumber>, <adtype>, <secondtext>, <email> are returned with the command.

Some proprietary commands are implemented to fully manage 3G phonebook.

3.6.11 +CPBF Find phonebook entries

| Description | Command | Possible Response(s) |
|---------------------|------------------|--|
| Find entries | +CPBF=<findtext> | [+CPBF: <index1>, <number>, <type>, <text> [, <hidden>] [, <group>] [, <adnumber>] [, <adtype>] [, <secondtext>] [, <email>] [[...]] <CR><LF>+CPBF:<index2>, <number>, <type>, <text> [, <hidden>] [, <group>] [, <adnumber>] [, <adtype>] [, <secondtext>] [, <email>]]] +CME ERROR: <err> |
| Get location ranges | +CPBR=? | +CPBF: [<nlength>], [<tlength>], [<glength>], [<slength>], [<elength>] +CME ERROR: <err> |

Parameters

| <findtext> | Description |
|-------------|--|
| String type | Field of maximum length <tlength>; Character set as specified by +CSCS |

For other parameters: refer to +CPBR command.

Clarification

Only first <group>, <adnumber>, <adtype>, <secondtext>, <email> are returned with the command.

Some proprietary commands are implemented to fully manage 3G phonebook.

3.6.12 +CPBW Write phonebook entry

| Description | Command | Possible Response(s) |
|--|--|--|
| Write entry | +CPBW=[<index>][,<number>][,<type>][,<text>][,<group>][,<adnumber>][,<adtype>][,<secondtext>][,<email>][,<hidden>]]]]]]]]] | +CME ERROR: <err> |
| Get location ranges and supported values | +CPBW=? | +CPBW: (list of supported <index>s), [<nlength>],(list of supported <type>s), [<tlength>],[<glength>],[<slength>],[<elength>] +CME ERROR: <err> |

Parameters

| <index> | Description |
|---------|--|
| 0.999 | Field of maximum length <tlength>; Character set as specified by +CSCS |

For other parameters: refer to +CPBR command.

Clarification

Only first <group>,<adnumber>,<adtype>,<secondtext>,<email> are returned with the command.

Some proprietary commands are implemented to fully manage 3G phonebook.

3.6.13 +CCLK Clock

| Description | Command | Possible Response(s) |
|------------------------------|--------------|------------------------------------|
| Set time | +CCLK=<time> | +CME ERROR: <err> |
| Get current time | +CCLK? | +CCLK: <time> +CME ERROR: <err> |
| Test if command is supported | +CCLK=? | |

Parameters

| <time> | Description |
|---------------------|--|
| String type | Format is "yy/MM/dd,hh:mm:ss±zz", where characters indicate year (two last digits), month, day, hour, minutes, seconds and time zone (indicates the difference, expressed in quarters of an hour, between the local time and GMT; range 47...+48). E.g. 6th of May 1994, 22:10:00 GMT+2 hours equals to "94/05/06,22:10:00+08" |

3.6.14 +CSIM Generic SIM access

| Description | Command | Possible Response(s) |
|------------------------------|--------------------------|--|
| Send command to SIM | +CSIM=<length>,<command> | +CSIM: <length>,<response> +CME ERROR: <err> |
| Test if command is supported | +CSIM=? | |

Parameters

| <length> | Description |
|-----------------------|--|
| Integer type | Length of the characters that are sent to TE in <command> or <response> (two times the actual length of the command or response) |

| <command> | Description |
|------------------------|--|
| String type | Command passed on by the MT to the SIM in the format as described in GSM 51.01 Hexadecimal character format |

| <response> | Description |
|-------------------------|---|
| String type | Response to the command passed on by the SIM to the MT in the format as described in GSM 51.011 Hexadecimal character format |

Clarification

SIM commands RUN GSM ALGORITHM, TERMINAL PROFILE, ENVELOPE, FETCH and TERMINAL RESPONSE are not supported.

Whatever +CSCS setting, format of <command> and <response> is always hexadecimal. (AT+CSCS="HEX" is not supported)

3.6.15 +CRSM Restricted SIM access

| Description | Command | Possible Response(s) |
|------------------------------|--|---|
| Send command to SIM | +CRSM=<command>[,<fileid>[,<P1>,<P2>,<P3>[,<data>]]] | +CRSM:<sw1>,<sw2>[,<response>] +CME ERROR: <err> |
| Test if command is supported | +CRSM=? | |

Parameters

| <command> | Description |
|------------------------|---|
| 176 (READ BINARY) | Read a transparent EF Transparent file greater than 256 bytes are not supported: →P1 shall always be 0 (ERROR otherwise). →P2 shall be in the range 0-256 |
| 178 (READ RECORD) | Read a record Only P2="04" (absolute mode) is supported (Other modes seems not to be useful). |
| 192 (GET RESPONSE) | Get response If <fileid> is not provided, the command applies to the last selected file |
| 214 (UPDATE BINARY) | Read a transparent EF Only P1="00" and P2="00" is supported |
| 220 (UPDATE RECORD) | Update a record Only P2="03" (previous mode) is allowed for updates on cyclic file (refer to [51.011]). For linear files, SAP only supports mode P2="04" (absolute). |
| 242 (STATUS) | Status If <fileid> is not provided, the command applies to the last selected file ATP must memorise FileId of the last command (3F00 at the initialization of ATP, by default). Moreover, v_LengthPattern = 0 |

| <fileid> | Description |
|--------------|---|
| Integer type | Identifier of a elementary datafile on SIM. Mandatory for every command except STATUS |

| | Description |
|----------------------|---|
| <P1> <P2> <P3> | |
| Integer type | Parameters passed on by the MT to the SIM. These parameters are mandatory for every command, except GET RESPONSE and STATUS |
| | Description |
| <data> | |
| String type | Information which shall be written to the SIM Hexadecimal character format |
| | Description |
| <sw1> <sw2> | |
| Integer type | Information from the SIM about the execution of the actual command. These parameters are delivered to the TE in both cases, on successful or failed execution of the command |
| | Description |
| <response> | |
| String type | Response of a successful completion of the command previously issued. STATUS and GET RESPONSE return data, which gives information about the current elementary datafield. After READ BINARY, READ RECORD command the requested data will be returned. <response> is not returned after a successful UPDATE BINARY, UPDATE RECORD or SET DATA command Hexadecimal character format |

3.6.16 +CRSL Ringer sound level

| Description | Command | Possible Response(s) |
|--------------------------------------|---------------|--|
| Set incoming call ringer sound level | +CRSL=<level> | +CME ERROR: <err> |
| Get current level | +CRSL? | +CRSL: <level> +CME ERROR: <err> |
| Get supported values | +CRSL=? | +CRSL: (list of supported <level>s) +CME ERROR: <err> |

Parameters

| <level> | Description |
|----------------------|--------------------|
| 0..3 | Level range |

3.6.17 +CLVL Loudspeaker volume level

| Description | Command | Possible Response(s) |
|-------------------------|----------------|--|
| Set sound speaker level | +CLVL=<level> | +CME ERROR: <err> |
| Get current level | +CLVL? | +CLVL: <level> +CME ERROR: <err> |
| Get supported values | +CLVL=? | +CLVL: (list of supported <level>s) +CME ERROR: <err> |

Parameters

| <level> | Description |
|----------------------|--------------------|
| 1..10 | Level range |

3.6.18 +CMUT Mute control

| Description | Command | Possible Response(s) |
|----------------------|----------------|---------------------------------|
| Mute/unmute call | +CMUT=<n> | +CME ERROR: <err> |
| Get current mode | +CMUT? | +CMUT: <n> +CME ERROR: <err> |
| Get supported values | +CMUT=? | +CMUT: (list of supported <n>s) |

Parameters

| <n> | Description |
|------------------|--------------------|
| 0 | Mute off |
| 1 | Mute on |

3.6.19 +CACM Accumulated call meter

| Description | Command | Possible Response(s) |
|--------------------|------------------|-----------------------------|
| Reset ACM | +CACM=[<passwd>] | +CME ERROR: <err> |

| Description | Command | Possible Response(s) |
|------------------------------|---------|-----------------------------------|
| Get current ACM | +CACM? | +CACM: <acm> +CME ERROR: <err> |
| Test if command is supported | +CACM=? | |

Parameters

| <passwd> | Description |
|-------------|-------------|
| String type | SIM PIN2 |

| <acm> | Description |
|-------------|---|
| String type | Accumulated call meter value similarly coded as <ccm> under +CAOC |

3.6.20 +CAMM Accumulated call meter maximum

| Description | Command | Possible Response(s) |
|------------------------------|-----------------------------|-----------------------------------|
| Set ACMmax | +CAMM=[<acmmax>[,<passwd>]] | +CME ERROR: <err> |
| Get current ACMmax | +CAMM? | +CAMM: <acm> +CME ERROR: <err> |
| Test if command is supported | +CAMM=? | |

Parameters

| <acmmax> | Description |
|-------------|---|
| String type | Accumulated call meter maximum value similarly coded as <ccm> under +CAOC; value zero disables ACMmax feature |

| <passwd> | Description |
|-------------|-------------|
| String type | SIM PIN2 |

3.6.21 +CPUC Price per unit and currency table

| Description | Command | Possible Response(s) |
|---|------------------------------------|---|
| Set price per unit and currency | +CPUC=<currency>, <ppu>[,<passwd>] | +CME ERROR: <err> |
| Get current currency and price per unit | +CPUC? | +CPUC: <currency>, <ppu> +CME ERROR: <err> |
| Test if command is supported | +CPUC=? | |

Parameters

| <currency> | Description |
|-------------|--|
| String type | Three-character currency code (e.g. "GBP", "DEM"); character set as specified by command +CSCS |

| <ppu> | Description |
|-------------|--|
| String type | Price per unit; dot is used as a decimal separator (e.g. "2.66") |

| <passwd> | Description |
|-------------|-------------|
| String type | SIM PIN2 |

3.6.22 +CCWE Call Meter maximum event

| Description | Command | Possible Response(s) |
|-------------------------------|--------------|---|
| Set call meter mode max event | +CCWE=<mode> | +CME ERROR: <err> |
| Get current mode | +CCWE? | +CCWE: <mode> +CME ERROR: <err> |
| Get supported modes | +CCWE=? | +CCWE: (list of supported <mode>s) +CME ERROR: <err> |

Parameters

| <mode> | Description |
|--------|--|
| 0 | Disable the call meter warning event +CCWV |
| 1 | Enable the call meter warning event +CCWV |

3.6.23 +CLAN Set Language

| Description | Command | Possible Response(s) |
|---------------------|--------------|--|
| Set language | +CLAN=<code> | +CME ERROR: <err> |
| Get current mode | +CLAN? | +CLAN: <code> +CME ERROR: <err> |
| Get supported modes | +CLAN=? | +CLAN:(list of supported <code>s) +CME ERROR: <err> |

Parameters

| <code> | Description |
|-------------|---|
| String type | Language coded in ISO 639 format. "AUTO" and non volatile memory supported 2 letters. For example "en" for English. |

3.6.24 +CSGT Set Greeting Text

| Description | Command | Possible Response(s) |
|----------------------|-----------------------|--|
| Set greeting text | +CSGT=<mode>[,<text>] | +CME ERROR: <err> |
| Get current values | +CSGT? | +CSGT: <text>, <mode> +CME ERROR: <err> |
| Get supported values | +CSGT=? | +CSGT:(list of supported <mode>s),<ltext> +CME ERROR: <err> |

Parameters

| <mode> | Description |
|--------|------------------------|
| 0 | Turn off greeting text |
| 1 | Turn on greeting text |

| <text> | Description |
|-------------|-------------------------------------|
| String type | A free text that shall be displayed |

| <ltext> | Description |
|--------------|---------------------------------------|
| Integer type | Maximum number of character in <text> |

Clarification

This command only updates the greeting text (in SIM card or EEPROM).

The mode is not stored in non-volatile memory, therefore:

- Setting the mode to 0, even with a text as parameter is equivalent to setting the mode to 1 with an empty string (the greeting text is lost)
- The test command returns 1 if and only if the saved text is not empty (in other words +CSGT=1, then +CSGT? returns 0)

3.6.25 +CSVM Set Voice Mail Number

| Description | Command | Possible Response(s) |
|----------------------------------|----------------------------------|--|
| Set voice mailbox number | +CSVM=<mode>[,<number>[,<type>]] | +CME ERROR: <err> |
| Get current voice mailbox number | +CSVM? | +CSVM:<mode>,<number>,<type> +CME ERROR: <err> |
| Get supported values | +CSVM=? | +CSVM: (list of supported mode>s), (list of supported <type>s) +CME ERROR: <err> |

Parameters

| <mode> | Description |
|--------|---|
| 0 | Disable the voice mail number i.e delete the voice mailbox number |
| 1 | Enable the voice mail number |

| <number> | Description |
|-------------|---------------------------|
| String type | Character string <0..9,+> |

| <type> | Description |
|--------------|------------------------------|
| Integer type | Type of address (129 or 145) |

3.6.26 +CRMP Ring Melody Playback

| Description | Command | Possible Response(s) |
|----------------------|---|--|
| Play ring melody | +CRMP=<call type>[,<volume>[,<type>,<index>]] | +CME ERROR: <err> |
| Get supported values | +CRMP=? | +CRMP: (list of supported <call type>s),(list of supported <volume>s),(<type0>),(list of supported <index>s)[<CR><LF> +CRMP: (list of supported <call type>s),(list of supported <volume>s),(<type1>),(list of supported <index>s) +CME ERROR: <err> |

Parameters

| <calltype> | Description |
|------------|-----------------------|
| 0 | Manufacturer specific |

| <volume> | Description |
|----------|-------------|
| 1..3 | volume |

| <type> | Description |
|--------|----------------------|
| 0 | Manufacturer defined |

| <index> | Description |
|---------|-----------------------------|
| 1..10 | Index |
| 11 | Correspond to vibrator mode |

Clarification

If a melody is played, it's just played for 10 sec., then stopped.

3.6.27 +CLAC List all available AT commands

| Description | Command | Possible Response(s) |
|------------------------------|---------|--|
| List all commands | +CLAC | <AT Command1>[<CR><LF><AT Command2>[...]] +CME ERROR: <err> |
| Test if command is supported | +CLAC=? | +CME ERROR: <err> |

3.6.28 +CALA Set alarm time

| Command | Possible Response(s) |
|--|--|
| +CALA=<time>[,<n>[,<type>[,<text>[,<recurr>[,<silent>]]]]] | +CME ERROR: <err> |
| +CALA? | [+CALA: <time>,<n1>,[<recurr>] [<CR><LF>+CALA: <time>,<n2>,[<recurr>] [...]]] +CME ERROR: <err> |
| +CALA=? | +CALA: (list of supported <n>s),<tlength>,<rlength>,(list of supported <silent>s) +CME ERROR: <err> |

Parameters

| <time> | Description |
|-------------------|---|
| 07/04/11,11:34:25 | internal clock (Cf. +CCLK) string type "hh:mm:ss" if <recurr> is present or "yy/mm/dd,hh:mm:ss" if not. |

| <n>, <n1>, <n2> | Description |
|-----------------|--|
| 1,2... | index of the alarm (range 1 to 5 for now). |

| <recurr> | Description |
|---------------|---|
| "0","1"..."7" | <p>string type value indicating day of week for the alarm in one of the following formats:</p> <p>"<1..7>[,<1..7>[...]]" – Sets a recurrent alarm for one or more days in the week. The digits 1 to 7 corresponds to the days in the week, Monday (1), ..., Sunday (7).</p> <p>Example: The string "1,2,3,4,5" may be used to set an alarm for all weekdays.</p> <p>"0" – Sets a recurrent alarm for all days in the week</p> |

Clarification

Set command sets an alarm time in the MT. If setting fails in an MT error, +CME ERROR: <err> is returned. To set up a recurrent alarm for one or more days in the week, the <recurr>-parameter may be used.

When an alarm is timed out and executed, the unsolicited result code +CALV: <n> is always returned. Read command returns the list of current active alarm settings in the MT. Test command returns supported array index values, alarm types, and maximum length of the text to be displayed.

3.6.29 +CALD Delete alarm

| Command | Possible Response(s) |
|-----------|--|
| +CALD=<n> | +CME ERROR: <err> |
| +CALD=? | +CALD: (list of supported <n>s) +CME ERROR: <err> |

Parameters

| <n> | Description |
|--------|--|
| 1,2... | integer type value indicating the index of the alarm; default is manufacturer specific |

Clarification

Action command deletes an alarm in the MT. If the command fails in an MT error, +CME ERROR: <err> is returned. Test command returns supported array index values.

3.7 Control and status result codes

3.7.1 +CCWV Call Meter warning value

| Description | Result code |
|--------------------------|-------------|
| Call meter warning value | +CCWV |

Parameters

| <ccm> | Description |
|-------------|---|
| String type | Three bytes of the current call meter value in hexadecimal format (e.g. "00001E" indicates decimal value 30); value is in home units and bytes are similarly coded as ACMmax value in the SIM card or in the active application in the UICC (GSM or USIM) |

Clarification

This warning will be triggered shortly before the ACM (Accumulated Call Meter) maximum value is reached, an unsolicited result code +CCWV will be sent, if enabled by +CCWE command. The warning is issued approximately when 30 seconds call time remains. It is also issued when starting a call if less than 30 seconds call time remains.

3.7.2 +CIEV Indicator event report

| Description | Result code |
|--------------|----------------------|
| Event report | +CIEV: <ind>,<value> |

Parameters

| <ind> | Description |
|-------|-------------|
| 0 | battchg |
| 1 | signal |

| <value> | Description |
|---------|----------------------------|
| 0..5 | Range of value for <ind>=0 |
| 0..4 | Range of value for <ind>=1 |

3.8 Mobile Termination error control

3.8.1 +CMEE Report Mobile Equipment error

| Description | Command | Possible Response(s) |
|----------------------|-------------|---------------------------------|
| Set error mode | +CMEE=[<n>] | |
| Get current mode | +CMEE? | +CMEE: <n> |
| Get supported values | +CMEE=? | +CMEE: (list of supported <n>s) |

Parameters

| <mode> | Description |
|--------|---|
| 0 | Disable +CME ERROR: <err> result code and use ERROR instead |
| 1 | Enable +CME ERROR: <err> result code and use numeric <err> |
| 2 | Enable +CME ERROR: <err> result code and use verbose <err> values |

3.9 Mobile Termination error result code

3.9.1 +CME ERROR

| Description | Result code |
|-------------|-------------------|
| Error type | +CME ERROR: <err> |

General error

| Numeric mode | Verbose Mode |
|--------------|-----------------------------|
| 0 | Phone failure |
| 1 | No connection to phone |
| 2 | Phone-adaptor link reserved |
| 3 | Operation not allowed |
| 4 | Operation not supported |
| 5 | PH-SIM PIN required |
| 6 | PH-FSIM PIN required |
| 7 | PH-FSIM PUK required |
| 10 | SIM not inserted (Note) |

WISMO218 AT Command Manual

| Numeric mode | Verbose Mode |
|--------------|---|
| 11 | SIM PIN required |
| 12 | SIM PUK required |
| 13 | SIM failure (Note) |
| 14 | SIM busy (Note) |
| 15 | SIM wrong (Note) |
| 16 | Incorrect password |
| 17 | SIM PIN2 required |
| 18 | SIM PUK2 required |
| 20 | Memory full |
| 21 | Invalid index |
| 22 | Not found |
| 23 | Memory failure |
| 24 | Text string too long |
| 25 | Invalid characters in text string |
| 26 | Dial string too long |
| 27 | Invalid characters in dial string |
| 30 | No network service |
| 31 | Network timeout |
| 32 | Network not allowed - emergency calls only |
| 40 | Network personalization PIN required |
| 41 | Network personalization PUK required |
| 42 | Network subset personalization PIN required |
| 43 | Network subset personalization PUK required |
| 44 | Service provider personalization PIN required |
| 45 | Service provider personalization PUK required |
| 46 | Corporate personalization PIN required |
| 47 | Corporate personalization PUK required |
| 50 | Incorrect parameters |
| 99 | Resource limitation (for +CCWA command only) |
| 100 | Unknown |

NOTE: This error code is also applicable to UICC.

GPRS-related error

| Numeric mode | Verbose Mode |
|--------------|---|
| 103 | Illegal MS |
| 106 | Illegal ME |
| 107 | GPRS services not allowed |
| 111 | PLMN not allowed |
| 112 | Location area not allowed |
| 113 | Roaming not allowed in this location area |
| 132 | Service option not supported |
| 133 | Requested service option not subscribed |
| 134 | Service option temporarily out of order |
| 149 | PDP authentication failure |
| 150 | Invalid mobile class |
| 148 | Unspecified GPRS error |

3.10 Commands for Packet domains

3.10.1 +CGDCONT Define PDP Context

| Description | Command | Possible Response(s) |
|--------------------------|---|--|
| Define a PDP | +CGDCONT=[<cid> [, <PDP_type> [, <APN> [, <PDP_addr> [, <d_comp> [, <h_comp>]]]]]]] | |
| List current defined PDP | +CGDCONT? | +CGDCONT: <cid>, <PDP_type>, <APN>, <PDP_addr>, <data_comp>, <head_comp> [<CR><LF>+CGDCONT: <cid>, <PDP_type>, <APN>, <PDP_addr>, <data_comp>, <head_comp> [...]]] |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|----------------------|------------|--|
| Get supported values | +CGDCONT=? | +CGDCONT: (range of supported <cid>s), <PDP_type>,,,(list of supported <d_comp>s), (list of supported <h_comp>s) [<CR><LF>]+CGDCONT: (range of supported <cid>s), <PDP_type>,,,(list of supported <d_comp>s), (list of supported <h_comp>s)[...]] |

Parameters

| <cid> | Description |
|-------|---|
| 1 | PDP Context Identifier 1 Definition stored in non-volatile memory |
| 2 | PDP Context Identifier 2 Definition stored in non-volatile memory |
| 3 | PDP Context Identifier 3 Default <cid> Locked in non-volatile memory and is always defined. |
| 4..11 | PDP Context Identifier 4..11 |

| <PDP_type> | Description |
|------------|---------------------------------------|
| IP | Internet Protocol (IETF STD 5) |
| PPP | Point to Point Protocol (IETF STD 51) |

| <APN> | Description |
|-------------|---|
| String type | Access Point Name If the value is null or omitted, then the subscription value will be requested |

| <PDP_address> | Description |
|---------------|---|
| String type | IP address Format: "<n>.<n>.<n>.<n>" where <n>=0..255 If the value is null or equals 0.0.0.0 a dynamic address will be requested. The allocated address may be read using the +CGPADDR command |

| <code><d_comp></code> | Description |
|-----------------------------|---|
| 0 | PDP data compression off Default if value is omitted |

| <code><h_comp></code> | Description |
|-----------------------------|---|
| 0 | PDP header compression off Default if value is omitted |

Clarification

For `<cid>` 1,2 and 3, PDP context definition is stored in EEPROM i.e parameters provided in +CGDCONT for PDP context definition and PDP context status (defined/undefined) are stored in non-volatile memory (If a PDP has been defined with +CGDCONT, after a switch off / switch on, AT+CGDCONT? will list the PDP has defined).

`<cid>` 3 is locked. This means that TE is not allowed to modify definition and parameters of `<cid>=3` with +CGDCONT set command. This gives a default PDP context with parameters that TE cannot change (Default parameter are located in t_hee_atp_PDPContext section).

`<cid>` 3 is also the default `<cid>`: if +CGDCONT with `<cid>` omitted is received, `<cid>` 3 will be used.

For `<cid>` 1,2 and 3 the following parameters are stored in non volatile memory:

| Parameter name | Length | Default value | Non volatile memory field |
|----------------------------------|----------|---------------|-----------------------------|
| <code><cid></code> | 2 bits | 1,2 or 3 | v_hee_PDPCtxtCid |
| Locked | 1 bit | 0xFF..0xFF | v_hee_PDPCtxtLocked |
| Defined | 1 bit | 0x00 | v_hee_PDPCtxtDefined |
| <code><precedence></code> | 2 bits | 0x00 | v_hee_PDPCtxtQosPrecedence |
| <code><delay></code> | 3 bits | 0x00 | v_hee_PDPCtxtQosDelay |
| <code><reliability></code> | 3 bits | 0x03 | v_hee_PDPCtxtQosReliability |
| <code><peak></code> | 4 bits | 0x00 | v_hee_PDPCtxtQosPeak |
| <code><mean></code> | 1 byte | 0x00 | v_hee_PDPCtxtQosMean |
| <code><pdp_type></code> | 1 byte | 0x01 (IP) | v_hee_PDPType |
| <code><APN></code> | 64 bytes | 0xFF..0xFF | a_hee_PDPCtxtApn |
| <code><PDP_address></code> | 4 bytes | 0x00..0x00 | a_hee_PDPCtxtAddress |

| Parameter name | Length | Default value | Non volatile memory field |
|------------------------------|--------|---------------|-------------------------------------|
| <Guaranteed bitrate DL> | 1 byte | 0x00 | v_hee_PDPCtxtQosGuaranteedDLBitRate |
| <Guaranteed bitrate UL> | 1 byte | 0x00 | v_hee_PDPCtxtQosGuaranteedULBitRate |
| <Traffic handling priority> | 2 bits | 0x00 | v_hee_PDPCtxtQosTrafficHandling |
| <Transfer delay> | 6 bits | 0x00 | v_hee_PDPCtxtQosTransferDelay |
| <SDU error ratio> | 4 bits | 0x00 | v_hee_PDPCtxtQosSDUErrorRatio |
| <Residual bit error ratio> | 4 bits | 0x00 | v_hee_PDPCtxtQosResidualBER |
| <Maximum bitrate DL> | 1 byte | 0x00 | v_hee_PDPCtxtQosMaxDLBitRate |
| <Maximum bitrate UL> | 1 byte | 0x00 | v_hee_PDPCtxtQosMaxULBitRate |
| <Maximum SDU size> | 1 byte | 0x00 | v_hee_PDPCtxtQosMaxSDUSize |
| <Delivery of erroneous SDUs> | 3 bits | 0x00 | v_hee_PDPCtxtQosDeliveryErrSDU |
| <Delivery order> | 2 bits | 0x00 | v_hee_PDPCtxtQosDeliveryOrder |
| <Traffic class> | 3 bits | 0x00 | v_hee_PDPCtxtQosTrafficClass |

3.10.2 +CGQREQ Quality of Service Profile (Requested)

| Description | Command | Possible Response(s) |
|-------------------------|--|----------------------|
| Set requested QOS (R97) | +CGQREQ=[<cid> [<precedence> [<delay> [<reliability.> [<peak> [<mean>]]]]]]] | |

| Description | Command | Possible Response(s) |
|----------------------|-----------|--|
| Get current settings | +CGQREQ? | +CGQREQ: <cid>, <precedence>, <delay>, <reliability>, <peak>, <mean> [<CR><LF>+CGQREQ: <cid>, <precedence>, <delay>, <reliability>, <peak>, <mean> [...]] |
| Get supported values | +CGQREQ=? | +CGQREQ: <PDP_type>, (list of supported <precedence>s), (list of supported <delay>s), (list of supported <reliability>s) , (list of supported <peak>s), (list of supported <mean>s) [<CR><LF>+CGQREQ: <PDP_type>, (list of supported <precedence>s), (list of supported <delay>s), (list of supported <reliability>s) , (list of supported <peak>s), (list of supported <mean>s) [...]] |

Parameters

| <cid> | Description |
|-------|--|
| 1..3 | PDP Context Identifier Definition stored in non-volatile memory (refer to +CGDCONT) |
| 4..11 | PDP Context Identifier |

| <precedence> | Description |
|--------------|---------------------------------------|
| 0 (default) | QOS precedence class subscribed value |
| 1..3 | QOS precedence class |

| <delay> | Description |
|-------------|----------------------------------|
| 0 (default) | QOS delay class subscribed value |
| 1..4 | QOS delay class subscribed |

| <reliability> | Description |
|---------------|--|
| 0 | QOS reliability class subscribed value |

| <reliability> | Description |
|----------------------------|---|
| 1..5 | QOS reliability class Default value: 3 |

| <peak> | Description |
|---------------------|--|
| 0 (default) | QOS peak throughput class subscribed value |
| 1..9 | QOS peak throughput class |

| <mean> | Description |
|---------------------|--|
| 0 (default) | QOS mean throughput class subscribed value |
| 1..18 | QOS mean throughput class |
| 31 | QOS mean throughput class best effort |

Clarification

Refer to § 6.1.2 for QoS mapping between R99 and R97/R98 QoS.

3.10.3 +CGQMIN Quality of Service Profile (Minimum acceptable)

| Description | Command | Possible Response(s) |
|-----------------------|---|---|
| Set minimum QOS (R97) | +CGQMIN=[<cid> [,<precedence> [,<delay> [,<reliability.> [,<peak> [,<mean>]]]]]]] | |
| Get current settings | +CGQMIN? | +CGQMIN: <cid>, <precedence>, <delay>, <reliability>, <peak>, <mean> [<CR><LF>+CGQMIN: <cid>, <precedence>, <delay>, <reliability.>, <peak>, <mean> [...]] |

| Description | Command | Possible Response(s) |
|----------------------|------------|--|
| Get supported values | +CGQMIN =? | +CGQMIN: <PDP_type>, (list of supported <precedence>s), (list of supported <delay>s), (list of supported <reliability>s) , (list of supported <peak>s), (list of supported <mean>s) [<CR><LF>+CGQMIN: <PDP_type>, (list of supported <precedence>s), (list of supported <delay>s), (list of supported <reliability>s) , (list of supported <peak>s), (list of supported <mean>s) [...]] |

Parameters

Refer to +CGQREQ

Clarification

Refer to § 6.1.2 for QoS mapping between R99 and R97/R98 QoS.

3.10.4 +CGATT PS attach or detach

| Description | Command | Possible Response(s) |
|----------------------|-------------------|--------------------------------------|
| Attach or detach | +CGATT= [<state>] | |
| Get current state | +CGATT? | +CGATT: <state> |
| Get supported states | +CGATT=? | +CGATT: (list of supported <state>s) |

Parameters

| <state> | Description |
|---------|-------------|
| 0 | Detached |
| 1 | Attached |

3.10.5 +CGACT PDP context activate or deactivate

| Description | Command | Possible Response(s) |
|------------------------------|---|----------------------|
| Activate or deactivate a PDP | +CGACT=[<state> [,<cid>[,<cid>[,...]]]] | |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|------------------------|----------|---|
| Get current PDPs state | +CGACT? | +CGACT: <cid>, <state> [<CR><LF>+CGACT: <cid>, <state> [...]] |
| Get supported states | +CGACT=? | +CGACT: (list of supported <state>s) |

Parameters

| <state> | Description |
|---------|-------------|
| 0 | Deactivated |
| 1 | Activated |

| <cid> | Description |
|-------|------------------------|
| 1..3 | PDP Context Identifier |
| 4..11 | PDP Context Identifier |

Clarification

This command is used to tests PDPs with network simulators. Successful activation of PDP on real network is not guaranteed.

Refer to +CGDATA clarification for more information.

3.10.6 +CGCMOD PDP Context Modify

| Description | Command | Possible Response(s) |
|----------------------------------|-------------------------------|---|
| Request PDP context modification | +CGCMOD=[<cid>[,<cid>[,...]]] | OK ERROR |
| Get active PDPs | +CGCMOD=? | +CGCMOD: (list of <cid>s associated with active contexts) |

Parameters

| <cid> | Description |
|-------|------------------------|
| 1..11 | PDP Context Identifier |

Clarification

Recommendation specifies that after the command has completed, the MT returns to online data state but "OK" result code is expected: this seems inconsistent.

From Wavecom point of view, +CGCMOD behaviour is more similar to +CGACT command, hence the implementation choice is not to switch link to online data mode after PDP context modification.

TE will have to send +++ escape sequence to switch channel to online command if +CGCMOD cannot be performed from another AT channel. TE will have to use O command, if required, to switch channel to online data mode.

3.10.7 +CGDATA Enter data state

| Description | Command | Possible Response(s) |
|----------------------|-------------------------|-------------------------------------|
| Enter data state | +CGDATA[=<L2P>,[<cid>]] | CONNECT ERROR |
| Get supported values | +CGDATA=? | +CGDATA: (list of supported <L2P>s) |

Parameters

| <L2P> | Description |
|-------|--|
| PPP | Point-to-point protocol for a PDP such as IP |

| <cid> | Description |
|-------|------------------------|
| 1..3 | PDP Context Identifier |
| 4..11 | PDP Context Identifier |

Clarification

If no parameters are provided (i.e +CGDATA=<CR>), the last <cid> activated with +CGACT or the default <cid> is used.

Only one <cid> in the command is supported (i.e +CGDATA="PPP", <cid><CR>)

This command is used for PDP tests on network emulators. On real network functioning of +CGACT and then +CGDATA for data transfer is not guaranteed.

+CGDATA implementation does not perform PS attach or PDP context activation. The PDP identified by <cid>, when provided, in +CGDATA must have been activated previously thanks to +CGACT command.

+CGDATA only switches channel to online data mode and open PPP server in a proprietary mode called "FTA mode" (In this mode PPP only acts a relay).

For IP over PPP services, ATD*98 or ATD*99 commands must be used: when activating a PDP context, PCO (protocol configuration option) has to be provided to network. PCO can be provided to network only if a PPP negotiation (LCP/NCP

negotiation) has been initiated between mobile and TE before PDP activation (refer to TS 27.060 §9.1). This negotiation is possible only if AT channel is switched to online data mode before PDP context activation. Hence, the PDP identified with <cid> in +CGDATA should not have been activated by +CGACT → not possible in the current implementation (+CGDATA does not behaves as ATD*9x when <cid> is not activated)

To go back in online command, the “+++” escape sequence has to be sent on link in data mode

+CGDATA can also be used to switch again channel to online data mode (after “+++”) if PDP is still active (same behaviour has ATO command).

PDP test use case:

| AT commands | Comments |
|--------------------|---|
| AT+CGACT=1,1 OK | PDP 1 is activated No PCO negotiation |
| AT+CGDATA CONNECT | PPP server is opened in FTA mode, channel is switched in online data mode No LCP/NCP negotiation |
| Data transfer | |
| +++ OK | Channel is back to online command mode |
| ATH OK | PPP server FTA mode is closed but PDP is NOT deactivated |
| AT+CGACT=0,1 OK | PDP 1 is deactivated. (If ATH is not sent before deactivation, +CGACT returns ERROR) |

3.10.8 +CGPADDR Show PDP address

| Description | Command | Possible Response(s) |
|-------------------|----------------------------------|---|
| Get PDP addresses | +CGPADDR=[<cid> [, <cid> [...]]] | +CGPADDR: <cid>, <PDP_addr> [<CR><LF>]+CGPADDR: <cid>, <PDP_addr> [...] |
| Get defined <cid> | +CGPADDR=? | +CGPADDR: (list of defined <cid>s) |

Parameters

| <cid> | Description |
|-------|------------------------|
| 1..3 | PDP Context Identifier |
| 4..11 | PDP Context Identifier |

| <PDP_address> | Description |
|---------------|--|
| String type | IP address Format: "<n>.<n>.<n>.<n>" where <n>=0..255 |

Restriction

Set command return address provided by the network if a connection has been established.

3.10.9 +CGCLASS GPRS mobile station class

| Description | Command | Possible Response(s) |
|-----------------------|--------------------|--|
| Set mode of operation | +CGCLASS=[<class>] | |
| Get current mode | +CGCLASS? | +CGCLASS: <class> |
| Get supported mode | +CGCLASS=? | +CGCLASS: (list of supported <class>s) |

Parameters

| <class> | Description |
|---------|--|
| A | Class-A mode of operation (A/Gb mode), or CS/PS mode of operation (Iu mode) (highest mode of operation) MT would operate simultaneous PS and CS service |
| B | Class-B mode of operation (A/Gb mode), (not applicable in Iu mode) MT would operate PS and CS services but not simultaneously |
| CG | Class-C mode of operation in PS only mode (A/Gb mode), or PS mode of operation (Iu mode) MT would only operate PS services |
| CC | Class-C mode of operation in CS only mode (A/Gb mode), or CS (Iu mode) (lowest mode of operation) MT would only operate CS services |

3.10.10 +CGREG GPRS network registration status

| Description | Command | Possible Response(s) |
|--------------------------------------|--------------|--|
| Set registration notification mode | +CGREG=[<n>] | |
| Get current registration information | +CGREQ? | +CGREG: <n>,<stat>[,<lac>,<ci>] +CME ERROR: <err> |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|----------------------|----------|----------------------------------|
| Get supported values | +CGREG=? | +CGREG: (list of supported <n>s) |

Parameters

| <n> | Description |
|-----|--|
| 0 | Disable network registration unsolicited result code |
| 1 | Enable network registration unsolicited result code +CGREG: <stat> |
| 2 | Enable network registration and location information unsolicited result code +CGREG: <stat>[,<lac>,<ci>] |

| <stat> | Description |
|--------|---|
| 0 | Not registered, MT is not currently searching an operator to register to The GPRS service is disabled, the UE is allowed to attach for GPRS if requested by the user |
| 1 | Registered, home network |
| 2 | Not registered, but MT is currently trying to attach or searching an operator to register to The GPRS service is enabled, but an allowable PLMN is currently not available. The UE will start a GPRS attach as soon as an allowable PLMN is available. |
| 3 | Registration denied The GPRS service is disabled, the UE is not allowed to attach for GPRS if requested by the user. |
| 4 | Unknown |
| 5 | Registered, roaming |

| <lac> | Description |
|-------------|---|
| String type | Two byte location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal) |

| <ci> | Description |
|-------------|--|
| String type | Two byte cell ID in hexadecimal format |

3.10.11 +CGSMS Select service for MO SMS messages

| Description | Command | Possible Response(s) |
|----------------------|--------------------|--|
| Set SMS service | +CGSMS=[<service>] | |
| Get current service | +CGSMS? | +CGSMS: <service> |
| Get supported values | +CGSMS=? | +CGSMS: (list of currently available <service>s) |

Parameters

| <service> | Description |
|-----------|--|
| 0 | Packet Domain |
| 1 | Circuit switched |
| 2 | Packet Domain preferred (use circuit switched if GPRS not available) |
| 3 | Circuit switched preferred (use Packet Domain if circuit switched not available) |

Clarification

When <service> value is 2, the SMS is sent on GPRS network if already attached. Otherwise it is sent on circuit switched network. If an error occurs on the GPRS network, no further attempt is made.

3.10.12 Request Packet Domain service 'D'

| Description | Command | Possible Response(s) |
|-------------------------------|--|----------------------|
| Request packet domain service | D*99[*[<called_address>][*['<L2P>'][*['<cid>']]])# | CONNECT |

Parameters

| <called_address> | Description |
|------------------|--|
| String type | Called party in the address space applicable to the PDP Only empty string is allowed: |

| <L2P> | Description |
|-------|-------------|
| 1 | PPP |

| <cid> | Description |
|--------------------|------------------------|
| 1..3 | PDP Context Identifier |
| 4..11 | PDP Context Identifier |

Clarification

If <cid> is not supported or is supported but omitted, ERROR will be returned

If <cid> correspond to an already active PDP context (activated with +CGACT command) ERROR will be returned, the PDP must be in quiescent state before ATD*9x.

3.10.13 Request Packet Domain IP service 'D'

| Description | Command | Possible Response(s) |
|---------------------------------|----------------|-----------------------------|
| Request packet domain IPservice | D*98[*<cid>]# | CONNECT |

Parameters

| <cid> | Description |
|--------------------|------------------------|
| 1..3 | PDP Context Identifier |
| 4..11 | PDP Context Identifier |

Clarification

If <cid> is not supported or is supported but omitted, ERROR will be returned

If <cid> correspond to an already active PDP context (activated with +CGACT command) ERROR will be returned, the PDP must be in quiescent state before ATD*9x.

3.10.14 +CGEREP Packet Domain event reporting

| Description | Command | Possible Response(s) |
|-----------------------------------|--------------------------|---|
| Set +CGEV: XXX notifications mode | +CGEREP=[<mode>[,<bfr>]] | |
| Get current settings | +CGEREP? | +CGEREP: <mode>, <bfr> |
| Get supported values | +CGEREP=? | +CGEREP: (list of supported <mode>s),(list of supported <bfr>s) |

Parameters

| <mode> | Description |
|---------------------|---|
| 0 | Buffer unsolicited result codes in the MT; if MT result code buffer is full, the oldest ones is discarded. |
| 1 | Discard unsolicited result codes when MT TE link is reserved (e.g. in on line data mode); otherwise forward them directly to the TE |
| 2 | Buffer unsolicited result codes in the MT when MT TE link is reserved (e.g. in on line data mode) and flush them to the TE when MT TE link becomes available; otherwise forward them directly to the TE |

| <bfr> | Description |
|--------------------|--|
| 0 | MT buffer of unsolicited result codes defined within this command is cleared when <mode> 1 or 2 is entered |
| 1 | MT buffer of unsolicited result codes defined within this command is flushed to the TE when <mode> 1 or 2 is entered |

3.11 Packet domains result codes

3.11.1 +CGREG registration status

| Description | Result code |
|---------------------|-----------------------------|
| Registration change | +CGREG: <stat>[,<lac>,<ci>] |

Parameters

| <stat> | Description |
|---------------------|---|
| 0 | Not registered, MT is not currently searching an operator to register to The GPRS service is disabled, the UE is allowed to attach for GPRS if requested by the user |
| 1 | Registered, home network |
| 2 | Not registered, but MT is currently trying to attach or searching an operator to register to The GPRS service is enabled, but an allowable PLMN is currently not available. The UE will start a GPRS attach as soon as an allowable PLMN is available. |

WISMO218 AT Command Manual

| <stat> | Description |
|---------------------|---|
| 3 | Registration denied The GPRS service is disabled, the UE is not allowed to attach for GPRS if requested by the user. |
| 4 | Unknown |
| 5 | Registered, roaming |

| <lac> | Description |
|--------------------|---|
| String type | Two byte location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal) |

| <ci> | Description |
|-------------------|--|
| String type | Two byte cell ID in hexadecimal format |

4 ITU-T V25.ter commands

4.1 Call control

4.1.1 A Answer

| Description | Command | Possible Response(s) |
|------------------|---------|----------------------|
| Answer a MT call | A | |

Clarification

In-call modifications by network are possible when during setup phase, two-bearer capability list have been negotiated (one speech the other multimedia).

If call is modify from speech to multimedia “CONNECT 64000” is sent to TE.

If call is modify from multimedia to speech OK is sent to TE.

4.1.2 D Dial

| Description | Command | Possible Response(s) |
|--|---------------------------------------|----------------------|
| Initiate a MO call | D[<dialstring>[<semicolon>]] | +CME ERROR: <err> |
| Direct dialling from phonebook name | D><str>[<clir>][<cug>][<:semicolon>] | +CME ERROR: <err> |
| Direct dialling from phonebook memory location | D>mem<n>[<clir>][<cug>][<:semicolon>] | +CME ERROR: <err> |
| Direct dialling from phonebook entry location | D><n>[<clir>][<cug>] [<:semicolon>] | +CME ERROR: <err> |

Parameters

| <dialstring> | Description |
|-----------------|--|
| Dialling digits | Dialling digits: 0 1 2 3 4 5 6 7 8 9 * # + a b c d A B C D , T P t p ! W w @ Note: T, P, D, !, @ are ignored |

| <semicolon> | Description |
|---------------|--|
| Character ";" | Semicolon character shall be added when voice call is originated |

| <str> | Description |
|-------------|--|
| String type | should equal to an alphanumeric field in at least one phonebook entry in the searched memories; used character set should be the one selected with +CSCS |

| <clir> | Description |
|--------|--|
| I | Override the CLIR supplementary service subscription default value for this call Invocation (restrict CLI presentation) |
| i | Override the CLIR supplementary service subscription default value for this call Suppression (allow CLI presentation) |

| <cug> | Description |
|-------|--|
| G | Control the CUG supplementary service information for this call CUG Not supported |
| g | Control the CUG supplementary service information for this call CUG Not supported |

| <mem> | Description |
|-------|------------------------------------|
| "SM" | Only "SM" storage possible for SMS |

| <n> | Description |
|--------------|---|
| Integer type | Memory location, should be in the range of locations available in the memory used |

Restriction

<clir>, <cug> and characters *T*, *P*, *D*, *!*, *@* and , in <str> are ignored.

Clarification

The result code "OK" can be sent immediately after call setup or only once call is connected to remote party. Refer to *PSCSSC command for more details.

If SAT call control modifies the call into an SS or USSD and error is return to the TE.

In-call modifications by MS are possible when during setup phase, two-bearer capability list have been negotiated (one speech the other multimedia).

ATD (without parameter) is used to modify the call from speech to multimedia (upgrade of service). "CONNECT 64000" will be sent if modification succeeds.

For MO call setup, if the semi-colon is present, then speech mode will be requested first (speech preferred), if semi-colon is not present multimedia mode will be requested first (multimedia preferred)

4.1.3 D> Direct dialling from phone book

| Description | Command | Possible Response(s) |
|--------------------|----------------------------------|----------------------|
| Initiate a MO call | ATD><str>[; ATD>[<mem>]<n>[;] | |

Parameters

| <str> | Description |
|-------|--|
| | alphanumeric field (if possible all available memories should be searched for correct entry) |
| <mem> | Description |
| | Memory storage (ME, SIM) |
| <n> | Description |
| | Entry location |

4.1.4 H Hang up

| Description | Command | Possible Response(s) |
|----------------|------------|----------------------|
| Hang up a call | H[<value>] | +CME ERROR: <err> |

Parameters

| <value> | Description |
|----------------------|--|
| 0 (Default value) | Disconnect ALL calls on THE channel the command is requested All active or waiting calls, CS data calls, GPRS call of the channel will be disconnected. |
| 1 | Disconnect all calls on ALL connected channels. All active or waiting calls, CSD calls, GPRS call will be disconnected (clean up of all calls of the ME). |
| 2 | Disconnect all connected CS data call only on the channel the command is requested (speech calls (active or waiting) or GPRS calls are not disconnected). |
| 3 | Disconnect all connected GPRS calls only on the channel the command is requested (speech calls (active or waiting) or CS data calls are not disconnected) |
| 4 | Disconnect all CS calls (either speech or data) but does not disconnect waiting call (either speech or data) on the channel the command is requested. |
| 5 | Disconnect waiting call (either speech or data) but does not disconnect other active calls (either CS speech, CS data or GPRS) on the channel the command is requested. (rejection of incoming call) |

Clarification

Note: Voice call disconnection is also dependant of +CVHU settings.

In-call modifications by MS are possible when during setup phase, two-bearer capability list have been negotiated (one speech the other multimedia).

ATH (without parameter) is used to modify the call from multimedia to speech (upgrade of service) OK will be sent if modification succeeds.

ATH will not disconnect the multimedia call; +CHUP command has to be used.

If ATH is received and a video telephony call is currently in speech mode, ERROR is returned.

In case of in-call modification initiated by network, ATH is used to reject the modification.-colon is not present multimedia mode will be requested first (multimedia preferred)

4.1.5 L Monitor speaker loudness

| Description | Command | Possible Response(s) |
|--------------|-------------|----------------------|
| Set Loudness | L[<volume>] | |

Parameters

| <volume> | Description |
|----------|-------------|
| 0..9 | volume |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

4.1.6 M Monitor speaker mode

| Description | Command | Possible Response(s) |
|-------------|-----------|----------------------|
| Set mode | M[<mode>] | |

Parameters

| <mode> | Description |
|--------|-------------|
| 0..9 | mode |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

4.1.7 O Online

| Description | Command | Possible Response(s) |
|-----------------------|-----------|----------------------|
| Switch to online mode | O[<type>] | |

Parameters

| <type> | Description |
|----------------------|--|
| 0 (Default value) | Return to online data state from online command state. |

4.1.8 P Pulse dialling

| Description | Command | Possible Response(s) |
|----------------|---------|----------------------|
| Pulse dialling | P | |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

4.1.9 S0 Automatic Answer

| Description | Command | Possible Response(s) |
|-----------------------------|----------|----------------------|
| Set automatic answer | S0=<num> | |
| Read current register value | S0? | <num> |

Parameters

| <num> | Description |
|--------|--|
| 0 | No automatic answer |
| 1..255 | Number of rings the modem will wait for before answering the phone if a ring is detected |

4.1.10 S6 Pause before blind dialling

| Description | Command | Possible Response(s) |
|--------------------|-----------|----------------------|
| Set pause duration | S6=<time> | |

Parameters

| <time> | Description |
|--------|-------------|
| 0..999 | Time |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

4.1.11 S7 connection completion timeout

| Description | Command | Possible Response(s) |
|-----------------------------|-----------|----------------------|
| Set timeout | S7=<time> | |
| Read current register value | S7? | <time> |

Parameters

| <time> | Description |
|---------------------|---|
| 1..255 | Amount of time the modem will wait for the carrier signal from the remote modem. If a carrier is not received in this time, the modem will hang up and send the NO CARRIER result code. |

4.1.12 S8 Comma dial modifier

| Description | Command | Possible Response(s) |
|-----------------------------|----------------|-----------------------------|
| Set time | S8=<time> | |
| Read current register value | S8? | <time> |

Parameters

| <time> | Description |
|---------------------|---|
| 0..255 | The value of this register determines how long the modem should pause when it sees a comma in the dialling string |

Clarification

Comma modifier is not supported in dial string; this command has no effect on ME (simple response OK).

4.1.13 S10 Automatic disconnect delay

| Description | Command | Possible Response(s) |
|-----------------------------|----------------|-----------------------------|
| Set time | S10=<time> | |
| Read current register value | S10? | <time> |

Parameters

| <time> | Description |
|---------------------|---|
| 0..255 | Amount of time from when the modem recognizes a loss of carrier to when it will hang up |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

4.1.14 T Tone dialling

| Description | Command | Possible Response(s) |
|---------------|---------|----------------------|
| Set dial tone | T | |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

4.2 General TA control commands

4.2.1 A/ Repeat last command

| Description | Command | Possible Response(s) |
|------------------------------|---------|----------------------|
| Repeat the last command line | A/ | |

4.2.2 I Identification information

| Description | Command | Possible Response(s) |
|------------------------------------|------------|----------------------|
| Request identification information | I[<value>] | <text> |

Parameters

| <value> | Description |
|-------------|------------------------------------|
| 0 (default) | Get model identifier |
| 1 | Ignored |
| 2 | Ignored |
| 3 | Get software version |
| 4 | Get manufacturer id and TCD number |
| 5 | Get manufacturer id |
| 6..7 | Ignored |

4.2.3 Z Reset default configuration

| Description | Command | Possible Response(s) |
|--------------------------------|------------|----------------------|
| Reset to default configuration | Z[<value>] | |

Parameters

| <value> | Description |
|----------------------|-------------------|
| 0 (Default value) | Restore profile 0 |
| 1 | Restore profile 0 |

Clarification

Parameter impacted by Z command:

| Command | Parameter name | Default value | Non volatile memory field |
|---------|----------------|---------------|---------------------------|
| E | <echo> | 0x01 | v_Echo |
| Q | <result> | 0x00 | v_SuppressResult |
| V | <format> | 0x01 | v_Verbose |
| X | <result> | 0x04 | v_ExtendedresultCode |
| &C | <behavior> | 0x01 | v_DcdControl |
| &D | <behavior> | 0x02 | v_DTRBehaviour |
| &S | <override> | 0x01 | V_DSRcontrol |
| &R | <option> | 0x01 | v_DTScontrol |
| +IFC | <TA_by_TE> | 0x00 | v_FlowControlIDCEbyDTE |
| +IFC | <TE_by_TA> | 0x01 | v_FlowControlDTEbyDCE |
| &K | <mode> | 0x00 | v_FlowControl |
| +FCLASS | <class> | 0x00 | v_Fclass |
| S0 | <num> | 0x00 | v_S0 |
| S1 | <num> | 0x00 | v_S1 |
| S3 | <char> | 0x00 | v_S3 |
| S4 | <char> | 0x0D | v_S4 |
| S5 | <char> | 0x0A | v_S5 |
| S7 | <time> | 0x08 | v_S7 |
| S8 | <time> | 0x32 | v_S8 |

| Command | Parameter name | Default value | Non volatile memory field |
|---------|----------------|---------------|---------------------------|
| S10 | <time> | 0x0E | v_S10 |

4.2.4 &F Factory defined configuration

| Description | Command | Possible Response(s) |
|--------------------------------|-------------|----------------------|
| Reset to factory configuration | &F[<value>] | |

Parameters

| <value> | Description |
|----------------------|------------------------------|
| 0 (Default value) | Set to factory configuration |

Clarification

Parameter impacted by &F command:

| Command | Parameter name | Default value | Length | Non volatile memory field |
|---------|----------------|---------------|--------|---------------------------|
| E | <echo> | 0x01 | 1 bit | v_Echo |
| Q | <result> | 0x00 | 1 bit | v_SuppressResult |
| V | <format> | 0x01 | 1 bit | v_Verbose |
| X | <result> | 0x04 | 3 bits | v_ExtendedresultCode |
| &S | <override> | 0x00 | | V_DSRcontrol |
| +IFC | <TA_by_TE> | 0x00 | 2 bits | v_FlowControlDCEbyDTE |
| +IFC | <TE_by_TA> | 0x02 | 2 bits | v_FlowControlDTEbyDCE |
| &K | <mode> | 0x00 | 3 bits | v_FlowControl |
| S0 | <num> | 0x00 | 1 byte | v_S0 |
| S1 | <num> | 0x00 | 1 byte | v_S1 |
| S3 | <char> | 0x0D | 1 byte | v_S3 |
| S4 | <char> | 0x0A | 1 byte | v_S4 |
| S5 | <char> | 0x08 | 1 byte | v_S5 |
| S7 | <time> | 0x64 | 1 byte | v_S7 |
| S8 | <time> | 0x02 | 1 byte | v_S8 |
| S10 | <time> | 0x0E | 1 byte | v_S10 |

WISMO218 AT Command Manual

| Command | Parameter name | Default value | Length | Non volatile memory field |
|---------|-----------------|----------------------|----------------------------|--|
| +CRLP | <ver> | 0x00 | 1 byte | v_CrlpVer |
| +CRLP | <T4> | 0x07 | 1 byte | v_CrlpT4 |

4.2.5 +GCAP Complete capabilities list

| Description | Command | Possible Response(s) |
|-------------|---------|----------------------|
| Get list | +GCAP | +GCAP:<list> |

Parameters

| <list> | Description |
|-------------|--|
| String type | List of capabilities +FCLASS +CGSM |

4.2.6 +GMI Manufacturer identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|-------------------------------------|
| Get manufacturer id | +GMI | <manufacturer> +CME ERROR: <err> |
| Test if command is supported | +GMI=? | |

Parameters

| <manufacturer> | Description |
|----------------|-----------------|
| String type | Manufacturer id |

4.2.7 +GMM Model identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|------------------------------|
| Get model id | +GMM | <model> +CME ERROR: <err> |
| Test if command is supported | +GMM=? | |

Parameters

| <model> | Description |
|-------------|-------------|
| String type | Model id |

4.2.8 +GMR Revision identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|---------------------------------|
| Get model id | +GMR | <revision> +CME ERROR: <err> |
| Test if command is supported | +GMR=? | |

Parameters

| <revision> | Description |
|-------------|-------------|
| String type | Revision id |

4.2.9 +GSN Serial number identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|---------------------------|
| Get model id | +GSN | <sn> +CME ERROR: <err> |
| Test if command is supported | +GSN=? | |

Parameters

| <sn> | Description |
|-------------|-------------|
| String type | IMEI |

4.3 TA-TE interface commands

4.3.1 E Echo

| Description | Command | Possible Response(s) |
|--------------|-----------|----------------------|
| Control echo | E[<echo>] | |

Parameters

| <echo> | Description |
|--------|--------------------------|
| 0 | Characters echo disabled |
| 1 | Characters echo enabled |

4.3.2 Q Result code suppression

| Description | Command | Possible Response(s) |
|---------------------|-------------|----------------------|
| Control result code | Q[<result>] | |

Parameters

| <result> | Description |
|----------|------------------------------------|
| 0 | Result codes are transmitted to TE |
| 1 | Result codes suppressed |

4.3.3 S3 Line termination character

| Description | Command | Possible Response(s) |
|--------------------------------|-----------|----------------------|
| Set line termination character | S3=<char> | |
| Get current value | S3? | <char> |

Parameters

| <char> | Description |
|---------------------|----------------------------|
| 13 | Termination character <CR> |

4.3.4 S4 Response formatting character

| Description | Command | Possible Response(s) |
|-----------------------------------|----------------|-----------------------------|
| Set response formatting character | S4=<char> | |
| Get current value | S4? | <char> |

Parameters

| <char> | Description |
|---------------------|----------------------------|
| 10 | Termination character <LF> |

4.3.5 S5 Line editing character

| Description | Command | Possible Response(s) |
|----------------------------|----------------|-----------------------------|
| Set line editing character | S5=<char> | |
| Get current value | S5? | <char> |

Parameters

| <char> | Description |
|---------------------|----------------------------|
| 8 | Termination character <BS> |

4.3.6 V TA response format

| Description | Command | Possible Response(s) |
|---------------------|----------------|-----------------------------|
| Set response format | V[<format>] | |

Parameters

| <format> | Description |
|----------|-----------------------------|
| 0 | Responses in numeric format |
| 1 | Responses in verbose format |

4.3.7 X Result code selection and call progress monitoring

| Description | Command | Possible Response(s) |
|---------------------------|-------------|----------------------|
| Set result code selection | X[<result>] | |

Parameters

| <result> | Description |
|----------|--|
| 0 | CONNECT result code is given upon entering online data state. Dial tone and busy detection are disabled. |
| 1 | CONNECT <text> result code is given upon entering online data state. Dial tone and busy detection are disabled. |
| 2 | CONNECT <text> result code is given upon entering online data state. Dial tone detection is enabled, and busy detection is disabled. |
| 3 | CONNECT <text> result code is given upon entering online data state. Dial tone detection is disabled, and busy detection is enabled. |
| 4 | CONNECT <text> result code is given upon entering online data state. Dial tone and busy detection are both enabled. |

4.3.8 &C DCD behaviour

| Description | Command | Possible Response(s) |
|-------------------|-----------------|----------------------|
| Set DCD behaviour | &C[<behaviour>] | |

Parameters

| <behaviour> | Description |
|-------------|--|
| 0 | DCE always presents the ON condition on circuit 109. |
| 1 | Circuit 109 changes in accordance with the underlying DCE, |

4.3.9 &D DTR behaviour

| Description | Command | Possible Response(s) |
|-------------------|-----------------|----------------------|
| Set DTR behaviour | &D[<behaviour>] | |

Parameters

| <behaviour> | Description |
|-------------|--|
| 0 | DCE ignores circuit 108/2. |
| 1 | Upon an on-to-off transition of circuit 108/2, the DCE enters online command state and issues an OK result code; the call remains connected. Not supported |
| 2 | Upon an on-to-off transition of circuit 108/2, the DCE instructs the underlying DCE to perform an orderly teardown of the call |

Clarification

In case of "Drop DTR", if the signal remains in the off state more than two seconds, it is considered as a PC disconnection and no "OK" is sent to the TE (cable considered unplugged).

The behaviour of the command complies to the recommendation description only with DTR pulses (pulse = DTR signal stay in the off state unless 2 seconds).

4.3.10 +IPR Fixed TE rate

| Description | Command | Possible Response(s) |
|----------------------|-------------|---|
| Set TE rate | +IPR=<rate> | |
| Get current rate | +IPR? | +IPR: <rate> |
| Get supported values | +IPR=? | +IPR: (list of supported auto-detectable<rate>s)[,(list of supported fixed-only<rate>s)] |

Parameters

| <rate> | Description |
|--------|--------------------------|
| 0 | Automatic rate detection |
| 1200 | 1200 bps |
| 2400 | 2400 bps |
| 4800 | 480 bps |
| 9600 | 9600 bps |

| <rate> | Description |
|--------|-------------|
| 19200 | 19200 bps |
| 38400 | 38400 bps |
| 57600 | 57600 bps |
| 115200 | 115200 bps |

4.3.11 +ICF TE-TA character framing

| Description | Command | Possible Response(s) |
|-----------------------------|----------------------------|--|
| Set TE-TA character framing | +ICF=[<format>[,<parity>]] | |
| Get current value | +ICF? | +ICF:<format>,<parity> |
| Get supported values | +ICF=? | +ICF:(list of supported <format>s), (list of supported<parity>s) |

Parameters

| <format> | Description |
|----------|---------------|
| 3 | 8 data 1 stop |

| <parity> | Description |
|----------|-------------|
| 3 | space |

Clarification

This command is supported for compatibility purpose and has no effect on ME. It provides information on hardware capabilities.

4.3.12 +IFC TE-TA local flow control

| Description | Command | Possible Response(s) |
|----------------------|--------------------------------|--------------------------------|
| Set TE-TA local flow | +IFC=[<TA_by_TE>[,<TE_by_TA>]] | |
| Get current value | +IFC? | +IFC:< TA_by_TE >,< TE_by_TA > |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|----------------------|---------|--|
| Get supported values | +IFC=? | +IFC:(list of supported <TA_by_TE>s), (list of supported<TE_by_TA>s) |

Parameters

| <TA_by_TE> | Description |
|------------|-----------------------|
| 0 | No flow control |
| 1 | Software flow control |
| 2 | Hardware flow control |

| < TA_by_TE> | Description |
|-------------|-----------------------|
| 0 | No flow control |
| 1 | Software flow control |
| 2 | Hardware flow control |

Clarification

This command configures the flow control mode.

4.4 Result codes

| Verbose result code (command V1 set) | Numeric result code (command V0 set) | Type | Description |
|--------------------------------------|--------------------------------------|--------------|--|
| BUSY | 7 | Final | Busy signal detected |
| CONNECT | 1 | Intermediate | Connection has been established |
| CONNECT <text> | Manufacturer specific | Intermediate | As CONNECT but manufacturer specific <text> gives additional information (e.g. connection data rate) |
| ERROR | 4 | Final | Command not accepted |
| NO ANSWER | 8 | Final | Connection completion timeout |
| NO CARRIER | 3 | Final | Connection terminated |
| NO DIALTONE | 6 | Final | No dialtone detected |

WISMO218 AT Command Manual

| Verbose result code (command V1 set) | Numeric result code (command V0 set) | Type | Description |
|--------------------------------------|--------------------------------------|-------------|--|
| OK | 0 | Final | Acknowledges execution of a command line |
| +CRING | | | |
| RING | 2 | Unsolicited | Incoming call signal from network |

Parameters

| <text> | Numeric value |
|--------|---------------|
| 2400 | 10 |
| 4800 | 11 |
| 9600 | 12 |
| 14400 | 13 |
| 19200 | 15 |
| 28800 | 17 |
| 38400 | 19 |
| 48000 | 21 |
| 56000 | 23 |
| 64000 | 25 |
| 33600 | 27 |

5 Hayes commands

5.1 Standard Hayes commands

5.1.1 B Communication option

| Description | Command | Possible Response(s) |
|--------------------------|---------------|----------------------|
| Set communication option | B[<standard>] | |

Parameters

| <standard> | Description |
|------------|-------------|
| 0..99 | standard |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

5.1.2 N Negotiate Handshake

| Description | Command | Possible Response(s) |
|---------------|-------------|----------------------|
| Set handshake | N[<option>] | |

Parameters

| <option> | Description |
|----------|-------------|
| 0..9 | option |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

5.1.3 S1 Ring Count

| Description | Command | Possible Response(s) |
|----------------------------------|---------|----------------------|
| Read ring count for last MT call | S1? | <num> |

Parameters

| <num> | Description |
|--------------------|---|
| 0..255 | Counts the number of rings detected on the line. It is cleared if a ring is not detected over an eight second time period. If the register value equals the value contained in S0, the modem will answer the phone Value stored in non volatile memory by &W command |

5.1.4 S2 Escape character

| Description | Command | Possible Response(s) |
|-----------------------|----------------|-----------------------------|
| Set escape character | S2=<esc> | |
| Read escape character | S2? | <esc> |

Parameters

| <esc> | Description |
|--------------------|-------------------------------|
| 43 | Escape character 43 (i.e '+') |

5.1.5 S11 DTMF Dialling Speed

| Description | Command | Possible Response(s) |
|-------------------------|----------------|-----------------------------|
| Set DTMF dialling speed | S11=<time> | |

Parameters

| <time> | Description |
|---------------------|---------------------|
| 0..999 | DTMF dialling speed |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

5.1.6 S95 Windows XP compatibility

| Description | Command | Possible Response(s) |
|--------------------------|----------------|-----------------------------|
| Windows XP compatibility | S95=<time> | |

Parameters

| <code><time></code> | Description |
|---------------------------|--------------------------|
| 0..999 | Windows XP compatibility |

Clarification

This command is supported for compatibility purpose and has no effect on ME (simple response OK)

5.1.7 W Extended Result code

| Description | Command | Possible Response(s) |
|--------------------------|---------|----------------------|
| Set extended result code | W<mode> | |

Parameters

| <code><mode></code> | Description |
|---------------------------|------------------------------------|
| 0 | Only result code CONNECT supported |

5.2 Advanced Hayes commands

5.2.1 &K Extended Flow control option

| Description | Command | Possible Response(s) |
|------------------|----------|----------------------|
| Set flow control | &K<mode> | |

Parameters

| <code><mode></code> | Description |
|---------------------------|---|
| 0 | Disable all flow control |
| 3 | Enable bi-directional hardware flow control. Only supported over USB |
| 4 | Enable XON/XOFF flow control Only supported over USB |

5.2.2 &S DSR option

| Description | Command | Possible Response(s) |
|----------------|--------------|----------------------|
| Set DSR option | &S<override> | |

Parameters

| <override> | Description |
|----------------------|---|
| 0 (Default value) | Causes DSR signal to be active at all times |
| 1 | Causes DSR signal to be active after answer tone has been detected and inactive after the carrier has been lost |

Clarification

Parameter stored by &W command.

5.2.3 &V Configuration profile

| Description | Command | Possible Response(s) |
|------------------------|---------------|----------------------|
| Display active profile | &V[<profile>] | |

Parameters

| <profile> | Description |
|----------------------|---|
| 0 (Default value) | Display the ACTIVE PROFILE, STORED PROFILE 1 and STORED PROFILE 0 |

5.2.4 &W Store Active profile

| Description | Command | Possible Response(s) |
|----------------------|---------------|----------------------|
| Store active profile | &W[<profile>] | |

Parameters

| <profile> | Description |
|----------------------|--|
| 0 (Default value) | Store the current configuration in profile 0 |
| 1 | Store the current configuration in profile 1 |

Clarification

Execution command stores the active <profile>. Two profiles are supported but they are equivalent.

Parameter stored by &W

| Command | Parameter name | Displayed by &V | Non volatile memory filed |
|---------|----------------|-----------------|---------------------------|
| E | <echo> | Y | v_Echo |
| Q | <result> | Y | v_SuppressResult |
| V | <format> | Y | v_Verbose |
| X | <result> | Y | v_ExtendedresultCode |
| &C | <behavior> | Y | v_DcdControl |
| &D | <behavior> | Y | v_DTRBehaviour |
| &S | <override> | Y | V_DSRcontrol |
| &R | <option> | Y | v_DTScontrol |
| +IFC | <TA_by_TE> | Y | v_FlowControlIDCEbyDTE |
| +IFC | <TE_by_TA> | Y | v_FlowControlIDTEbyDCE |
| &K | <mode> | Y | v_FlowControl |
| +FCLASS | <class> | Y | v_Fclass |
| S0 | <num> | Y | v_S0 |
| S1 | <num> | N | v_S1 |
| S3 | <char> | Y | v_S3 |
| S4 | <char> | Y | v_S4 |
| S5 | <char> | Y | v_S5 |
| S7 | <time> | Y | v_S7 |
| S8 | <time> | Y | v_S8 |
| S10 | <time> | Y | v_S10 |

6 TIA IS-101 commands

6.1 +VTS DTMF and tone generation

| Description | Command | Possible Response(s) |
|---|---------------------------------------|--|
| Generate tone Duration is set by +VTD | +VTS=<DTMF> | |
| Generate DTMF of frequencies <tone1> and <tone2>, lasting for a time <duration> (in 10 ms multiples). | +VTS=[<tone1>,<tone2>, <duration>] | |
| Generate tone Duration is set by <duration> | +VT={<DTMF>, <duration>} | |
| Get supported values | +VTS=? | (list of supported <tone1>s),(list of supported <tone2>s) ,(list of supported <duration>s) |

Parameters

| <DTMF> | Description |
|--------------------|--|
| Character type | A single ASCII character in the set 0..9, #,* ,A..D |
| <tone1> <tone2> | Description |
| 0 | Use of tone 1 et 2 does not operate in GSM Manufacturer specific tone |
| <duration> | Description |
| 0 | Manufacturer specific duration |

Clarification

This command only works for speech calls in active state.

6.2 +VTD Tone duration

| Description | Command | Possible Response(s) |
|----------------------|----------|--------------------------|
| Set tone duration | +VTD=<n> | |
| Get current duration | +VTD? | <n> |
| Get supported values | +VTD=? | (list of supported <n>s) |

Parameters

| <n> | Description |
|-----|--------------------------------|
| 0 | Manufacturer specific duration |

6.3 +VGR Receive gain selection

| Description | Command | Possible Response(s) |
|----------------------------|----------|--------------------------|
| Set receive gain | +VGR=<n> | |
| Get receive gain | +VGR? | <n> |
| Get supported receive gain | +VGR=? | (list of supported <n>s) |

Parameters

| | |
|-----|---|
| <n> | Description :gain in dBm 255 +63.5 254 +63 ... 129 +0.5 128 +0 127 -0.5 ... 2 -63 1 -63.5 0 AUTO (i.e. adjusted values inside the module) |
|-----|---|

6.4 +VGT Transmit gain selection

| Description | Command | Possible Response(s) |
|-------------------|----------|----------------------|
| Set transmit gain | +VGT=<n> | |
| Get transmit gain | +VGT? | <n> |

| Description | Command | Possible Response(s) |
|-----------------------------|---------|--------------------------|
| Get supported transmit gain | +VGT=? | (list of supported <n>s) |

Parameters

| | |
|-----|--|
| <n> | Description : gain in dBm 255 +63.5 254 +63 ... 129 +0.5 128 +0 127 -0.5 ... 2 -63 1 -63.5 0 AUTO (i.e. adjusted values inside the module) |
|-----|--|

6.5 +VIP Initialize voice parameter

| Description | Command | Possible Response(s) |
|--------------------------------|----------|--------------------------|
| Set voice parameters | +VIP=<n> | |
| Get supported voice parameters | +VIP=? | (list of supported <n>s) |

Parameters

| | |
|-----|---|
| <n> | Description : Mode 0 Handset (7 levels of volume, main audio interface) 1 Handsfree (5 levels of volume, main audio interface) 2 Headset (5 levels of volume, secondary audio interface) 3 Car kit (5 levels of volume, secondary audio interface) 4 Car kit (5 levels of volume, secondary audio interface) 5 Internal Loop 1 (test mode) 6 Internal Loop 2 (test mode) 7 Internal Loop 3 (test mode) 8 Leave test mode (test mode) 21 Identical to 2 (see note below) 22 Identical to 3 (see note below) 23 Digital Audio Interface |
|-----|---|

It is possible to re-direct the audio paths (0 to 4) as well as the audio parameters (filters, gain) through the provided Audio tool.

The mention to the main and secondary audio interfaces (Speaker and Micro) are linked to the default audio parameters and defined in [HW]

The values 1 to 4 are automatically reset after a call (return to 0). Values 21 and 22

WISMO218 AT Command Manual

force the same state as 2 and 3, until another write command.

Value 23 is also permanent until another write command

The values 5 to 8 have been developed for testing purposes

Level volume are accessible with AT+CLVL

7 TIA578A commands

7.1 General commands

7.1.1 +FMI Manufacturer identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|-------------------------------------|
| Get manufacturer ID | +FMI | <manufacturer> +CME ERROR: <err> |
| Test if command is supported | +FMI=? | |

Parameters

| <manufacturer> | Description |
|----------------|----------------------------------|
| String type | Read manufacturer identification |

7.1.2 +FMM Model identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|------------------------------|
| Get model ID | +FMM | <model> +CME ERROR: <err> |
| Test if command is supported | +FMM=? | |

Parameters

| <model> | Description |
|-------------|---------------------------|
| String type | Read model identification |

7.1.3 +FMR Revision identification

| Description | Command | Possible Response(s) |
|------------------------------|---------|---------------------------------|
| Get revision ID | +FMR | <revision> +CME ERROR: <err> |
| Test if command is supported | +FMR=? | |

Parameters

| <revision> | Description |
|-------------|------------------------------|
| String type | Read revision identification |

7.2 Capabilities identification and control

7.2.1 +FCLASS Model identification

| Description | Command | Possible Response(s) |
|---------------------|-----------|---------------------------------------|
| Set class | +FCLASS | |
| Get current class | +FCLASS? | +FCLASS: <class> |
| Get supported value | +FCLASS=? | +FCLASS: (list of supported <class>s) |

Parameters

| <class> | Description |
|---------|------------------------------|
| 0 | Data mode |
| 1 | Fax class 1 (TIA-578-A) mode |

7.2.2 +FTH HDLC transmit

| Description | Command | Possible Response(s) |
|---------------------|-------------|-----------------------------------|
| Set mode | +FTH=<mode> | |
| Get current mode | +FTH? | +FTH: <mode> |
| Get supported modes | +FTH=? | +FTH: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|--------|--------------------|
| 3 | Refer to TIA-578-A |

Clarification

Set command is sent to ME only when link is online data mode. Hence, set command is not implemented in AT command parser but in RLP/FAX module.

7.2.3 +FRH HDLC receive

| Description | Command | Possible Response(s) |
|---------------------|-------------|-----------------------------------|
| Set mode | +FRH=<mode> | |
| Get current mode | +FRH? | +FRH: <mode> |
| Get supported modes | +FRH=? | +FRH: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|--------|--------------------|
| 3 | Refer to TIA-578-A |

Clarification

Set command is sent to ME only when link is online data mode. Hence, set command is not implemented in AT command parser but in RLP/FAX module.

7.2.4 +FTM Facsimile transmit

| Description | Command | Possible Response(s) |
|---------------------|-------------|-----------------------------------|
| Set mode | +FTM=<mode> | |
| Get current mode | +FTM? | +FTM: <mode> |
| Get supported modes | +FTM=? | +FTM: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|--------------|---|
| Integer type | Refer to TIA-578-A Value 9600 is always returned by read command because communication must begin at this speed. |

Clarification

Set command is sent to ME only when link is online data mode. Hence, set command is not implemented in AT command parser but in RLP/FAX module.

7.2.5 +FRM Facsimile receive

| Description | Command | Possible Response(s) |
|------------------|-------------|----------------------|
| Set mode | +FRM=<mode> | |
| Get current mode | +FRM? | +FRM: <mode> |

WISMO218 AT Command Manual

| Description | Command | Possible Response(s) |
|---------------------|---------|-----------------------------------|
| Get supported modes | +FRM=? | +FRM: (list of supported <mode>s) |

Parameters

| <mode> | Description |
|--------------|---|
| Integer type | Refer to TIA-578-A Value 9600 is always returned by read command because communication must begin at this speed. |

Clarification

Set command is sent to ME only when link is online data mode. Hence, set command is not implemented in AT command parser but in RLP/FAX module.

8 Proprietary AT commands

8.1 Capabilities identification and control

8.1.1 #CLS Service class

| Description | Command | Possible Response(s) |
|----------------------|--------------|--|
| Set class | #CLS=<class> | |
| Get current class | #CLS? | #CLS: <class> |
| Get the current mode | #CLS=? | #CLS: (list of currently available <class>s) |

Parameters

| <class> | Description |
|-------------|------------------------------|
| 0 (default) | Data mode |
| 1 | Fax class 1 (TIA-578-A) mode |

Clarification

This command has the same role and behaviour as +FCLASS command.
It is needed for Microsoft® agreement.

8.2 Flow control command

8.2.1 &R RTS/CTS option

| Description | Command | Possible Response(s) |
|--------------------|------------|----------------------|
| Set RTS/CTS option | &R<option> | +CME ERROR: <err> |

Parameters

| <option> | Description |
|----------|--|
| 1 | In sync mode, CTS is always ON (RTS transitions are ignored). In async mode, CTS will only drop if required by the flow control (See Data stored by &W for default value). |

Clarification

This command selects how the modem controls CTS. CTS operation is modified if

hardware flow control is selected (see &K command). The parameter value, if valid, is written to S21 bit2

8.3 Manufacturer tests command

8.3.1 +CPOF Power off

| Description | Command | Possible Response(s) |
|-------------------|---------|----------------------|
| Switch off mobile | +CPOF | |

Description

This command allows switching off the mobile. Note that "OK" result code will appear immediately if the command is accepted and power off will occur after that. Unexpected random characters may also be issued during switch off of MS.

8.3.2 *PSSSURC Supplementary Services notification

| Description | Command | Possible Response(s) |
|---------------------|-----------------|---------------------------------------|
| Set mode | *PSSSURC=<mode> | |
| Get current mode | *PSSSURC? | *PSSSURC : <mode> |
| Get supported modes | *PSSSURC=? | *PSSSURC: (list of supported <mode>s) |

Description

This command is to configure the AT interface to give additional information through result code to TE when D command is entered with a SS string as parameter.

When <mode> parameter is enabled one or several intermediate result code are sent to provide additional information on SS operation.

Result code

| Description | Result code |
|-------------------------|---|
| Successful SS operation | *PSSSURC: <SsCode>[,<BasicServiceCode>,<SsStatus>,<no_reply_cond_timer>,<ccbs_index>,<phone_number_ton_npi>,<phone_number_config>,<phone_number>,<sub_address_type>,<sub_address_authority_and_format_identifie>,<sub_address_data>[,<clir_option>] |
| SS operation failure | *PSSSERR:<cause_select>,<cause> |

One intermediate result code per <service code> is sent

Parameters

| <mode> | Description |
|--------|---|
| 0 | Disable sending of additional result code |
| 1 | Enable sending of additional result code |

Clarification

Example: CFU interrogation for telephony service

ATD*#21*11#

*PSSSURC: 33,11,0,255,,129,0,,1,2,,1

OK

Ss_code = 33 → SPS_SC_CFU

BasicServicecode = 11 → SPS_BS_TELEPHONY

SsStatus = 0 → SPS_STATUS_DEACTIVATED

8.3.3 +PSSLEEP Power Management control

| Command | Possible Response(s) |
|-----------------|---|
| +PSSLEEP=<mngt> | +CME ERROR: <err> |
| +PSSLEEP=? | +PSSLEEP: (list of supported <mngt>s) OK |
| +PSSLEEP? | +PSSLEEP: <mngt> OK |

Parameters

| <mngt> | Description |
|--------|--|
| 0, 1 | 0: The module doesn't go in sleep mode as long as DTR is set to high level 1: The module decides by itself (internal timing) when it goes in sleep mode |

Clarification

Action command set sleep mode for MT. If the command fails in an MT error, +CME ERROR: <err> is returned. Test command returns supported array index values.

In sleep mode, need a 'A' to wake up the system, then the AT command can be input normally.

8.4 SIM toolkit command and result codes

8.4.1 *PSSTKI SIM Toolkit interface configuration

| Description | Command | Possible Response(s) |
|---------------------|----------------|---------------------------------------|
| Set mode | *PSSTKI=<mode> | +CME ERROR: <err> |
| Get current mode | *PSSTKI? | *PSSTKI : <mode> +CME ERROR: <err> |
| Get supported modes | *PSSTKI=? | *PSSTKI: (list of supported <mode>s) |

Description

This command is to configure SIM toolkit by AT command.

Parameters

| <mode> | Description |
|--------|--|
| 0 | STK by AT command is deactivated, only ME's MMI will receive SIM toolkit notifications |
| 1 | STK by AT command is activated: SIM toolkit notification will first be sent to AT parser. If an AT channel is connected, *PSSTK URC will be sent, *PSSTK AT command has to be used to respond. If no AT channel is connected: ME's MMI will receive the notification |

8.4.2 *PSSTK SIM Toolkit control

*PSSTK command is defined to support SIM toolkit by AT commands. Only part of SIM toolkit commands that interact with user or MMI can be controlled.

All other SIM toolkit mechanism such as terminal profile, SMS or CBM data download, call control or MO SMS control by SIM, event download and all command that does not require interaction with the user (or screen) are internally managed by the ME.

This command is implemented in ATCUST module and can be updated/modified.

Notification from SIM to user: PSSTK unsolicited result code

| Description | Result code |
|-------------------------------|--|
| Notification from SIM to User | *PSSTK: <notification type>, <parameter1>,...,<parameterN> |

Parameters

| <notification type> | Description |
|---|--|
| A string that represents the type of notification (proactive command name) received from the SIM. Some command requires the use of *PSSTK set command to send a response to the SIM. | |
| LANGUAGE NOTIFICATION | Sent on reception of APPI_STK_LANGUAGE_NOTIFICATION_IND |
| CONTROL BY SIM | Sent on reception of APPI_STK_CONTROL_BY_SIM_IND |
| REFRESH | Sent on reception of APPI_STK_REFRESH_IND |
| END CALL | Sent on reception of APPI_STK_END_CALL_IND |
| DISCONNECT | Sent on reception of APPI_CALL_ASYNC_DISCONNECT_IND |
| PROCESSING | Sent on reception of APPI_STK_PROCESSING_IND |
| END SESSION | Sent on reception of APPI_STK_END_SESSION_IND |
| ABORT SESSION | Sent on reception of APPI_STK_ABORT_SESSION_IND |
| NOTIFICATION | Sent on reception of APPI_STK_NOTIFICATION_IND Require use of *PSSTK set command to respond to SIM |
| SETUP CALL | Sent on reception of APPI_STK_SETUP_CALL_IND Require use of *PSSTK set command to respond to SIM |
| DISPLAY TEXT | Sent on reception of APPI_STK_DISPLAY_TEXT_IND Require use of *PSSTK set command to respond to SIM |
| GET INKEY | Sent on reception of APPI_STK_GET_INKEY_IND Require use of *PSSTK set command to respond to SIM |
| GET INPUT | Sent on reception of APPI_STK_GET_INPUT_IND Require use of *PSSTK set command to respond to SIM |
| PLAY TONE | Sent on reception of APPI_STK_PLAY_TONE_IND Require use of *PSSTK set command to respond to SIM |
| SELECT ITEM | Sent on reception of APPI_STK_SELECT_ITEM_IND Require use of *PSSTK set command to respond to SIM |
| SETUP MENU | |
| REMOVE MENU | Sent on reception of APPI_STK_REMOVE_MENU_IND Require use of *PSSTK set command to respond to SIM |
| SETUP IDLE MODE TEXT | Sent on reception of APPI_STK_SET_UP_IDLE_MODE_TEXT_IND Require use of *PSSTK set command to respond to SIM |

| <parameter i> | Description |
|------------------------|--|
| Integer or string type | Number of parameters in URC depends of message. Refer to STK SwISD and source code. |

Response from user to SIM: *PSSTK command

| Description | Command | Possible Response(s) |
|-----------------------------|--|---|
| Respond to SIM | *PSSTK=<reponse type>, <parameter1>,...,<parameterN> | +CME ERROR: <err> |
| Get supported response type | *PSSTK=? | *PSSTKI: (list of supported <response type>s) |

Parameters

| <response type> | Description |
|---|---|
| A string that represents the type of response to be sent to SIM (terminal response or envelope). Some response correspond to answer to *PSSTK URC. | |
| MENU SELECTION | Send a APPI_STK_MENU_SELECTION_REQ (On reception of APPI_STK_MENU_SELECTION_CNF, OK is sent) |
| GET ITEM LIST | Call macro MC_STK_FIRST_ITEM and MC_STK_NEXT_ITEM to get the information of the last received SET UP MENU or SELECT ITEM command. |
| ALL CALLS DISCONNECTED | Send a APPI_STK_ALL_DISCONNECTED_REQ |
| USER ACTIVITY | Send a APPI_STK_USER_ACTIVITY_IND |
| IDLE SCREEN AVAILABLE | Send a APPI_STK_IDLE_SCREEN_AVAILABLE_IND |
| SETUP CALL TERMINATED | Send a APPI_STK_SETUP_CALL_TERMINATED_REQ |
| COMMAND REJECTED | Send a APPI_STK_COMMAND_RJT. Used to reject any URC that requires a response. |
| NOTIFICATION | Send a APPI_STK_NOTIFICATION_RSP |
| SETUP CALL | Send a APPI_STK_SETUP_CALL_RSP |
| DISPLAY TEXT | Send a APPI_STK_DISPLAY_TEXT_RSP |
| GET INKEY | Send a APPI_STK_GET_INKEY_RSP |
| GET INPUT | Send a APPI_STK_GET_INPUT_RSP |
| PLAY TONE | Send a APPI_STK_PLAY_TONE_RSP |

| <response type> | Description |
|----------------------|---|
| SELECT ITEM | Send a APPI_STK_SELECT_ITEM_RSP |
| SETUP MENU | Send a APPI_STK_SETUP_MENU_RSP |
| REMOVE MENU | Send a APPI_STK_REMOVE_MENU_RSP |
| SETUP IDLE MODE TEXT | Send a APPI_STK_SET_UP_IDLE_MODE_TEXT_RSP |

| <parameter i> | Description |
|------------------------|--|
| Integer or string type | Number of parameters in URC depends of message. Refer to STK SwISD and source code. |

Use case

```

TE (PC)           ME
|               |
| <--- *PSSTK:"DISPLAY TEXT",... ----> | <- unsolicited result code
|               | received from SIM ToolKit
| ----- *PSSTK:"DISPLAY TEXT",... ---> | <- Answer to an unsolicited
|               | result code
| <----- OK -----> | <- AT command result

```

8.5 CPHS proprietary commands

8.5.1 *PSVMWN Voice Message Waiting Notification

| Description | Command | Possible Response(s) |
|---------------------|----------------|--------------------------------------|
| Set mode | *PSVMWN=<mode> | |
| Get current mode | *PSVMWN? | *PSVMWN: <mode> +CME ERROR: <err> |
| Get supported modes | *PSVMWN =? | *PSVMWN: (list of supported mode) |

Description

Set command enables/disables the presentation of notification result code from ME to TE

When <mode> = 1, a Voice Message Waiting Indication (*PSVMWI) is sent to TE when notification is received (special SMS) from network or at switch on.

| Description | Result code |
|----------------------------------|---|
| Voice Message Waiting Indication | *PSVMWI: <line Id > , <status> [<index>[,<NbMsgWaiting>]] (|

Parameters

| <mode> | Description |
|--------|--------------------------------------|
| 0 | Disable presentation of notification |
| 1 | Enable presentation of notification |

| <line Id> | Description |
|-----------|-------------------------|
| 1 | Line 1 |
| 2 | Line 2 (Auxiliary line) |
| 3 | Data |
| 4 | Fax |

| <status> | Description |
|----------|---------------------------------|
| 0 | No message waiting |
| 1 | At least one message is waiting |

| <index> | Description |
|---------|--|
| 0..255 | Record index in EF SMS if the received MWI message has been stored in SIM (if DCS indicates STORE MWI SMS) |

| <NbMsgWaiting> | Description |
|----------------|--|
| 0..255 | Number of message waiting on <line id> |

8.5.2 *PSALS Alternate Line Service

| Description | Command | Possible Response(s) |
|--------------------------------|-----------------|--|
| Select line for MO speech call | *PSALS=<Lineld> | |
| Get current line | *PSALS? | *PSALS: <lineld > +CME ERROR: <err> |

| Description | Command | Possible Response(s) |
|---------------------|-----------|--------------------------------------|
| Get supported lines | *PSALS =? | *PSALS: (list of supported <lineid>) |

Description

Set command is used to select the line to be used for MO speech calls.

For MT (speech) calls, +CRING URC (refer +CRC command) indicates on which line the call is receive (+CRING: VOICE → default case = line 1, +CRING: VOICE_AUX → line 2.)

| <line Id> | Description |
|----------------|-------------------------|
| 1 (Default) | Line 1 |
| 2 | Line 2 (Auxiliary line) |

8.5.3 *PSDCIN Diverted Call Indicator Notification

| Description | Command | Possible Response(s) |
|----------------------|-------------------------------|---|
| Set mode | *PSDCIN=<mode> [, <Line Id>] | [*PSDCIN: <Line Id>, <status> [[...] <CR><LF> * PSDCIN: <Line Id>, <status>]] +CME ERROR: <err> |
| Get current mode | *PSDCIN? | *PSCDIN: <mode > +CME ERROR: <err> |
| Get supported values | *PSDCIN =? | *PSDCIN: (list of supported <modes>), (list of supported <line>s) |

Description

Set command enables/disables the presentation of a Diverted Call Indication (also know as CFU) result code from ME to TE.

When <mode> = 2, status of <line Id> is requested. If <Line Id> is not provided query is requested for all lines.

When <mode> = 1, Diverted Call Indication *PSDCI is sent to TE on reception of network notification. (Several result code can been sent at the same time on reception of the notification)

| Description | Result code |
|--------------------------|-----------------------------|
| Diverted Call Indication | *PSDCI: <Line Id>, <status> |

Parameters

| <mode> | Description |
|--------|--|
| 0 | Disabled CFU notification presentation |
| 1 | Enabled CFU notification presentation |
| 2 | Query CFU status |

| <line Id> | Description |
|-----------|-------------------------|
| 1 | Line 1 |
| 2 | Line 2 (Auxiliary line) |
| 3 | Data |
| 4 | Fax |

| <status> | Description |
|----------|-------------|
| 0 | Not active |
| 1 | Active |

8.5.4 *PSMBNB Mailbox Number

| Description | Command | Possible Response(s) |
|---------------------------|---|---|
| Set mailbox number in SIM | *PSMBNB=<Line Id>[, <number>, <type> [,<text>]] | +CME ERROR: <err> |
| Read mailbox numbers | *PSMBNB? | [*PSMBNB: <Line Id>, <number>, <type>, <text> [[...] <CR><LF> *PSMBNB: <Line Id>, <number>, <type>, <text>]] +CME ERROR: <err> |
| Get supported values | *PSMBNB =? | *PSMBNB: (list of supported <Line Id>), (List of supported <type>), [<nlength>], [<tlength>] |

Description

The purpose of this command is not to replace +CSVM command but to offer more possibilities for Mailbox numbers settings (+CSVM command allow only voice mailbox settings, CPHS define one record per line).

Set command writes the mailbox number for <line id> in SIM.

If only <Line Id> is present in command corresponding record is deleted in SIM.

Parameters

| <line Id> | Description |
|-----------|-------------------------|
| 1 | Line 1 |
| 2 | Line 2 (Auxiliary line) |
| 3 | Data |
| 4 | Fax |

| <number> | Description |
|-------------|-------------------------------|
| String type | Phone number of format <type> |

| <type> | Description |
|--------------|---|
| Integer type | Type of address (refer GSM 04.08 [8] subclause 10.5.4.7) ; default 145 when dialling string includes international access code character "+", otherwise 129 |

| <text> | Description |
|-------------|--|
| String type | Field of maximum length <tlength> Character set as specified by +CSCS |

| <nlength> | Description |
|--------------|---|
| Integer type | Value indicating the maximum length of field <number> |

| <tlength> | Description |
|--------------|---|
| Integer type | Value indicating the maximum length of field <text> |

8.5.5 *PSCSP Customer Service Profile

| Description | Command | Possible Response(s) |
|-------------|---------|---|
| Set command | *PSCSP | |
| Read CSP | *PSCSP? | [*PSCSP: <Service Groupe code x>, <status> [[...]<CR><LF>]*PSCSP: < Service Groupe code y>, <status>] +CME ERROR: <err> |

| Description | Command | Possible Response(s) |
|----------------------|----------|--|
| Get supported values | *PSCSP=? | * PSCSP: (list of supported <Service Groupe code>) |

Description

Command used to read the CSP file in SIM.

Set command has no effect (OK returned).

Parameters

| <service group code> | Description |
|----------------------|--|
| String type | Hexadecimal representation of a coding group as defined in CPHS recommendation ("01".."09", "C0" "D5") |

| <status> | Description |
|-------------|---|
| String type | Bitfield representation of each element of a service group (ex: "11000000") |

8.5.6 *PSINFN Information number

| Description | Command | Possible Response(s) |
|--------------------------------|-----------------------------|---|
| Get information number entries | *PSINFN=<index1>[,<index2>] | [*PSINFN:<index1>,<number>,<type>,<text>,<Net Id>,< Prem Id>,< Level>[[...]]<CR><LF>*PSINFN:<index2>,<number>,<type>,<text>,<Net Id>,< Prem Id>,< Level>[[...]]]+CME ERROR: <err> |
| Read command | *PSINFN | |
| Get supported values | *PSINFN=? | *PSINFN: (list of supported <index>s),[<nlength>],[<tlength>] |

Description

Set command returns phonebook entries in location number range <index1>...<index2> from Information Number SIM file. If <index2> is left empty, only location <index1> is returned. If all queried locations are empty (but available), no information text lines may be returned (only an OK is returned). If listing fails in a ME error, +CME ERROR: <err> is returned.

Read command has no effect (returns OK)

Information number shall only be presented to TE if field InformationsNumbers of CSP file is 0xFF. (use of AT*PSCSP? To check Service Group D5). Otherwise +CME ERROR: <err> is returned.

Parameters

| | |
|------------------------|--|
| <index> | Description |
| <index1> | |
| <index2> | |
| 0..255 | Index of information number phonebook entry |
| <number> | Description |
| String type | Phone number of format <type> |
| <type> | Description |
| Integer type | Type of address |
| <text> | Description |
| String type | Field of maximum length <tlength> Character set as specified by +CSCS |
| <NetId> | Description |
| Integer type | Representation of the Network specific indicator |
| <PreMid> | Description |
| Integer type | Representation of Premium service indicator |
| <Level> | Description |
| Integer type | Representation of the level of the record (in the tree) |
| <nlength> | Description |
| Integer type | Value indicating the maximum length of field <number> |

| <tlength> | Description |
|------------------------|---|
| Integer type | Value indicating the maximum length of field <text> |

8.6 General purpose proprietary commands

8.6.1 *PSPRAS Pin Remaining Attempt Status

| Description | Command | Possible Response(s) |
|----------------------------|----------------|---|
| Set command | *PSPRAS | OK |
| Get remaining PIN attempts | *PSPRAS? | *PSPRAS: < pin1 >, <puk1>,<pin2>, <puk2> +CME ERROR: <err> |
| Get supported codes | *PSPRAS=? | *PSPRAS: (list of supported <code>) |

Description

This command is used to get the number of remaining PIN and PUK attempts.

Set command has no effect (returns OK).

Parameters

| <pin1> | Description |
|---------------------|--|
| 0..3 | Number of remaining attempts for PIN 1 |
| <pin2> | Description |
| 0..3 | Number of remaining attempts for PIN 2 |
| <puk1> | Description |
| 0..10 | Number of remaining attempts for PUK 1 |
| <puk2> | Description |
| 0..10 | Number of remaining attempts for PUK 2 |

| <code> | Description |
|----------|------------------|
| SIM PIN1 | PIN 1 identifier |
| SIM PIN2 | PIN 2 identifier |
| SIM PUK1 | PUK 1 identifier |
| SIM PUK2 | PUK 2 identifier |

8.6.2 *PSSEAV Service Availability

| Description | Command | Possible Response(s) |
|---------------------|----------------|--|
| Set mode | *PSSEAV=<mode> | |
| Get current mode | *PSSEAV? | *PSSEAV: <mode> [<CR><LF>]*PSREADY: <service> [...]<CR><LF>*PSREADY: <service>] |
| Get supported modes | *PSSEAV=? | *PSSEAV: (list of supported modes), (list of supported services) |

Description

Set command enables/disables the presentation of notification result code from ME to TE. When <mode> = 1, *PSREADY result code is sent to TE when <service> is available.

Read command is used to get current mode and to check which service are already available (*PSREADY is returned only for available services).

| Description | Result code |
|---------------|---------------------|
| Service ready | *PSREADY: <service> |

Parameters

| <mode> | Description |
|--------|-----------------------------------|
| 0 | Disable notification presentation |
| 1 | Enable notification presentation |

| <service> | Description |
|-----------|---------------------------------|
| 0 | Phone book service availability |
| 1 | SMS service availability |

| <service> | Description |
|-----------|--------------------------|
| 2 | CBM service availability |

Clarification

If a service becomes available before any AT channel is connected, *PSREADY notification will be buffered and sent as soon as the first AT channel connects.

8.6.3 +PSSREP Mobile start-up reporting

| Command | Possible Response(s) |
|---------------|---|
| +PSSREP=<act> | +CME ERROR: <err> |
| +PSSREP=? | +PSSREP: (list of supported <act>s) OK |
| +PSSREP? | +PSSREP: <act>,<stat> |

Parameters

| <act> | Description |
|--------|---|
| 0 or 1 | Indicates if the module must send an unsolicited code during the startup. 0: The module doesn't send an unsolicited code 1: The module will send an unsolicited code *PSSUP |

| <stat> | Description |
|--------|--|
| 0 or 1 | This code indicates the status of the module. 0: The module is ready to receive commands for the TE. No access code is required 1: The module is waiting for an access code. (The AT+CPIN? Command can be used to determine it) 2: The SIM card is not present 3: The module is in "SIMlock" state 4: unrecoverable error 5: unknown state |

Clarification

The module uses unsolicited code once after the boot process *PPSUP: <stat>

The PPSUP notification will not be sent if the module is in autobaud mode and nobytes have been received from TE to adapt the serial link to the actual speed

If the command fails in an MT error, +CME ERROR: <err> is returned. Test command returns supported array index values.

8.6.4 *PSCHRU Channel registration URC

| Description | Command | Possible Response(s) |
|----------------------------|----------------|---------------------------------------|
| Set URC filter | *PSCHRU=<mask> | |
| Get current channel filter | *PSCHRU? | *PSCHRU: <mask> |
| Get supported masks | *PSCHRU=? | *PSCHRU: (list of supported <mask>s) |

Description

Set command is used to filter one or several type of URC on a channel. By default all URC types are enabled on a newly opened channel.

This command only applies on the channel it is submitted, other channels are not impacted. Depending of <mask> value, URC will or will not be broadcasted on the channel.

Parameters

| <mode> | Description |
|--------|--|
| 0 | No URC sent on the channel |
| 1 | Call related URC to be sent on the channel: RING, +CRING, +CCCM, +CCWV, +CCWA, +CLIP, +COLP, +CSSI, +CSSU, *PSCALL, *PSDCI, *PSCSC, *PSCN, *PSVTCS |
| 2 | SMS related URC to be sent on the channel: +CDS, +CMT, +CMTI, *PSMWI |
| 4 | CBM related URC to be sent on the channel: +CBM |
| 8 | ME status related URC to be sent on the channel: +CIEV, *PSCP, *PSNWID, *PSUTTZ, |
| 16 | Network registration related URC to be sent on the channel: +CREG, +CGREG, *PSNTRG |
| 32 | SS related URC to be sent on the channel: +CUSD |
| 64 | Initialisation related URC to be sent on the channel: *PSREADY |
| 128 | Debug related URC to be sent on the channel: *PSDBG |
| 256 | SIM toolkit related URC to be sent on the channel: *PSSTK |

Clarification

To enable the display of URC SMS (2) and CALL(1) and to forbid the display of the

others on a channel, choose 2 and 1 parameter, i.e send:

AT*PSCHRU=3

OK

8.6.5 +PSTAT tool detection enable

| Description | Command | Possible Response(s) |
|----------------------------------|----------------|----------------------|
| Trig restart with tool detection | +PSTAT=<param> | OK |
| Get current format | +PSTAT? | ERROR |
| Get supported formats | +PSTAT =? | ERROR |

Parameters

| <param> | Description |
|--------------|-------------------|
| Integer type | Useless parameter |

Clarification

The set command enables tool presence detection by embedded and provokes an intended watchdog reset.

When restarting after WD, the init driver sends 'I' (0x49) on UART to enquire for a tool.

Further reboots (intended or not) does not provoke tool detection procedure.

8.6.6 *PSRDBS Radio band settings

| Description | Command | Possible Response(s) |
|----------------------|--|--|
| Set radio bands | *PSRDBS=<mode> [,<GSM band> , [<UMTS band>]] | +CME ERROR: <err> |
| Get current values | *PSRDBS? | *PSRDBS: <GSM band> [, <UMTS band>] |
| Get supported values | *PSRDBS=? | *PSRDBS: (list of supported <mode>s), (list of supported <GSM band>s), (list of supported <UMTS band>s) |

Description

Set command is used to set the radio band(s).

When <mode>=0, band settings are taken into account only at next switch on.

When <mode>=1, a stack restart is performed to select immediately the requested

settings.

Parameters

| <mode> | Description |
|----------------|--|
| 0 (Default) | Set radio bands, will be taken into account at next switch on |
| 1 | Set radio bands, a stack restart is performed to take into account the new selected bands. |

| <GSM band> | Description |
|------------|-------------|
| 1 | GSM 850 |
| 2 | GSM 900 |
| 4 | E-GSM |
| 8 | DCS 1800 |
| 16 | DCS 1900 |

Bit field type parameter; to set several bands sum up the values

| <UMTS band> | Description |
|-------------|-------------|
| 1 | UMTS band 1 |
| 2 | UMTS band 2 |
| 4 | UMTS band 3 |
| 8 | UMTS band 4 |
| 16 | UMTS band 5 |
| 32 | UMTS band 6 |

Bit field type parameter; to set several bands sum up the values

Clarification

Example:

To set GSM 900 & PCS1800 for GSM and band 1,2,3 for UMTS:

AT*PSRDBS=1,10,7

OK

8.6.7 *PSADC A/D Convert info

| Description | Command | Possible Response(s) |
|---------------|-------------------------|----------------------|
| Set A/D value | *PSADC=<Adc>,<Meastime> | |

Description

This command will return AdcValue,RequestedAdc,MeasTime,BurstPower.

Parameters

| <Adc> | Description |
|-------|---------------------|
| 0 | BAT_VOLTAGE |
| 3 | PRODUCT_TEMPERATURE |
| 4 | AUDIO_ACCESSORIES |
| 5 | OTHER_ACCESSORIES |
| 6 | VPERM_VOLTAGE |

| <Meastime> | Description |
|------------|---------------|
| 1 | DURING_TX |
| 2 | FAR_FROM_TX |
| 3 | NO_CONSTRAINT |

8.6.8 +PSRIC RI behaviour

| Description | Command | Possible Response(s) |
|-------------------------|---------------------------|----------------------|
| Set RI masker | +PSRIC=<Rlmask>,<Rlshape> | |
| Get RI masker | +PSRIC? | ERROR |
| Get supported RI masker | +PSRIC=? | ERROR |

Description

This command will set RI behaviour.

Parameters

| <Rlmask> | Description |
|----------|-------------|
| 0 | NO_RI |
| 1 | CALL_RI |
| 2 | SMS_RI |
| 4 | CBM_RI |
| 8 | SS_RI |

| <Rlmask> | Description |
|----------|-------------|
| 16 | CIEV_RI |
| 31 | ALL_RI |

| <Rlshape> | Description |
|-----------|---------------|
| 0 | PULSE_RI |
| 1 | CONTINUOUS_RI |

8.6.9 +WMGPIO GPIO access

| Description | Command | Possible Response(s) |
|---------------------------|--------------------|---|
| Set GPIO access | +WMGPIO=<IO>,<cde> | if <cde>=2 +WMGPIO: <IO>,<status> OK else OK |
| Get GPIO acces | +WMGPIO? | OK |
| Get supported GPIO access | +WMGPIO=? | +WMGPIO: (list of supported <IO>s),(list of supported <cde>s) OK |

Description

This command allows reading or writing a GPIO.

Parameters

| <IO> | Description |
|------|-------------|
| 1 | GPIO1 |
| 3 | GPIO3 |
| 5 | GPIO5 |

| <cde> | Description |
|-------|---|
| 0 | Reset the selected GPIO |
| 1 | Set the selected GPIO |
| 2 | Request the status of the selected GPIO |

| <status> | Description |
|----------|--------------|
| 0 | GPIO is low |
| 1 | GPIO is high |

Note: GPIO configuration is not stored in memory. The current configuration is lost with a reset.

Be aware that this command doesn't change the reset state of the GPIO.

8.6.10 +WMGPIOCFG GPIO configuration

| Description | Command | Possible Response(s) |
|----------------------------------|-----------------------------------|---|
| Set GPIO configuration | +WMGPIOCFG=<IO>,<dir>,<pull mode> | OK |
| Get GPIO configuration | +WMGPIOCFG? | +WMGPIOCFG: <IO>,<dir>,<pull mode> [+WMGPIOCFG: <IO>,<dir>,<pull mode> ...] OK |
| Get supported GPIO configuration | +WMGPIOCFG=? | +WMGPIOCFG: (list of supported <IO>s),(list of supported <dir>s),(list of supported <pull mode>s) OK |

Description

This command allows setting a GPIO as input or output.

Parameters

| <IO> | Description |
|------|-------------|
| 1 | GPIO1 |
| 3 | GPIO3 |
| 5 | GPIO5 |

| <dir> | Description |
|-------|-------------|
| 0 | output |
| 1 | input |

| <pull mode> | Description |
|-------------|-------------|
| 0 | pull down |
| 1 | pull up |
| 2 | no pull |

Note: The GPIO configuration is not stored in memory. The current configuration is lost with a reset.

If GPIO set as output, user cannot select pull mode as "no pull".

8.6.11 +WMPWM PWM and buzzer configuration

| Description | Command | Possible Response(s) |
|---------------------------------|--|---|
| Set PWM configuration | +WMPWM=<output>,<operation>,[<period>],[<dutycycle>] | OK |
| Get PWM configuration | + WMPWM? | +WMPWM:<output>,<operation>,<period>,<dutycycle> [+WMPWM:<output>,<operation>,<period>,<dutycycle> ...] OK |
| Get supported PWM configuration | + WMPWM=? | +WMPWM:(list of supported <output>s),(list of supported <operation>s),(list of supported <periods>s),(list of supported <dutycycle>s) OK |

Description

This command allows setting PWM or buzzer configuration.

Parameters

| <output> | Description |
|----------|-------------|
| 0 | PWM0 |
| 1 | PWM1 |
| 2 | Buzzer |

| <operation> | Description |
|-------------|-------------|
| 0 | Turn off |

| <operation> | Description |
|-------------|-------------------|
| 1 | Turn on |
| 2 | Always high level |

| <period> | Description |
|--|---|
| 0 ... 126 (when <output> is PWM0 or PWM1) | 0: PWM always low level 1 ... 126: PWM period as n+1 TSYSCLK/8 (TSYSCLK/8 = 1/(26MHz/8) = 307ns) |
| 0 ... 1024 (when <output> is buzzer) | freq = SYSCLK/(period*2*64) (ex: if period = 203, then freq = 26MHz/(203*2*64) = 1KHz) |

| <dutycycle> | Description |
|-------------|----------------------|
| 0 ... 100 | dutycycle percentage |

Note: - Buzzer does not have "Always high level" operation.

- Default values of period and duty-cycle for PWM0 and PWM1 are 63, 50.
- Default value of period and duty-cycle for buzzer are 250, 100.

8.7 Call and network proprietary commands

8.7.1 *PSCSCN Call state change notification

| Description | Command | Possible Response(s) |
|---------------------------------------|----------------|----------------------|
| Select notification presentation mode | *PSCSCN=<mode> | +CME ERROR: <err> |
| Get the current mode | *PSCSCN? | *PSCSCN: <mode> |

Description

This command allows presentation of information about CS call states as well as audio or in-call notifications related to current call.

This command does not replace +CLCC command. TE is notified whenever the state of a call changes, this avoid TE to use polling mechanism with +CLCC command to know the states of each call.

When <mode>=0, set command disables both the presentation of call state change URC (*PSCSC) and call notification URC (*PSCN)

When <mode> =1, set command enable the presentation of call state change URC

(*PSCSC) every time the states of a call change.

When <mode>=2, set command enables both the presentation of call state change URC (*PSCSC) and call notification URC (*PSCN) every time audio or in-call notification occurs (in-band, SS-notify...).

| Description | Result code |
|-------------------|---|
| Call state change | *PSCSC: <Call Id>, <State>, <Status>, [<Number>], [<type>], [<Line Id>], [<CauseSelect>], [<Cause>], [<Bearer>] |

The optional fields of the URC are filled only when information is available (i.e depending of the state of the call), otherwise they are left empty.

| Description | Result code |
|-------------------|----------------------------------|
| Call notification | *PSCN: <Call Id>, <Notification> |

The optional fields of the URC are filled only when information is available otherwise they are left empty.

Parameters

| <mode> | Description |
|--------|---|
| 0 | Disable presentation all notifications |
| 1 | Enable presentation of *PSCSC |
| 2 | Enable presentation of *PSCSC and *PSCN |

| <Call Id> | Description |
|-----------|---|
| 0 | Call Id not yet assigned (alerting MT call) |
| 1..7 | Call Id representing a CS speech call |
| > 8 | Call Id representing a CS data call |

| <State> | Description |
|---------|--|
| 0 | MO call SETUP (no control by SIM) |
| 1 | MO call SETUP WITH CONTROL BY SIM (accepted) |
| 2 | MO call SETUP ERROR (control by SIM rejected or other problem) |
| 3 | MO call PROCEED |
| 4 | MO call ALERT (at distant) |

WISMO218 AT Command Manual

| <State> | Description |
|---------|--|
| 5 | MO call CONNECT (with distant) |
| 6..9 | RFU |
| 10 | MT call SETUP |
| 11 | MT call SETUP ACCEPTED (Bearer capabilities accepted by the ME) |
| 12 | MT call SETUP REJECTED (Bearer capabilities rejected by the ME) |
| 13 | MT call ALERT |
| 14 | MT call CONNECT (ME has successfully accepted the call) |
| 15 | MT call CONNECT ERROR (ME was not able to accept the call) |
| 16..19 | RFU |
| 20 | Call DISCONNECT BY NETWORK |
| 21 | Call DISCONNECT BY USER |
| 22 | Call REJECT BY USER |
| 23..29 | RFU |
| 30 | MO call SETUP – Call initiated by SAT (SET UP CALL command received) |
| 31 | MO call PROCEED – Call initiated by SAT (SET UP CALL command received) |
| 32 | MO call ALERT (at distant) – Call initiated by SAT (SET UP CALL command received) |
| 33 | MO call CONNECT (with distant) – Call initiated by SAT (SET UP CALL command received) |

Note: This command uses information available at APPI interface (application i/f). AT parser does not interface directly with protocol stack so it does not have immediate access to L3 messages, this means that <state> does not match L3 messages exactly (as they are defined in 24.008 recommendation).

| <Status> | Description |
|----------|---|
| 0 | Call in ACTIVE state |
| 1 | Call in HOLD state (applicable only for speech calls, either MO or MT) |
| 2 | Call in MULTIPARTY ACTIVE state (applicable only for speech calls, either MO or MT) |
| 3 | Call in MULTIPARTY HOLD state (applicable only for speech calls, either MO or MT) |

| <Number> | Description |
|-----------------------|---------------------------------|
| String type | Phone number (same as in +CLIP) |

| <type> | Description |
|---------------------|------------------------------------|
| Integer type | Type of address (same as in +CLIP) |

| <Line Id> | Description |
|------------------------|-------------------------|
| 1 | Line 1 |
| 2 | Line 2 (auxiliary line) |

| <Cause Select> | Description |
|-----------------------------|--------------------|
| Integer type | Refer SwISD UPV |

| <Cause> | Description |
|----------------------|--------------------|
| Integer type | Refer SwISD UPV |

| <Bearer> | Description |
|-----------------------|---|
| String type | Hexadecimal representation format of bearer capability (for data calls only). |

| <Notification> | Description |
|--|-----------------------------------|
| SS notification by network (Partly described in Rec. 24.080) | |
| 1 | Incoming call is a forwarded call |
| 2 | Incoming call has been forwarded |
| 4 | Outgoing call has been forwarded |
| 5 | Call is waiting at distant |
| 6 | Call is held by distant |
| 7 | Call is retrieved by distant |
| 8 | Call is in multiparty |
| 9 | CLIR suppression rejected |
| 129 | Incoming call is a deflected call |

WISMO218 AT Command Manual

| <Notification> | | Description |
|---|--|-------------|
| 132 | Outgoing call has been deflected call | |
| Audio notification | | |
| 16 | Audio on | |
| 17 | Audio off | |
| 18 | In band information | |
| 19 | Audio mute | |
| SS status. (Partly described in Rec. 24.080 & Rec. 29.002) | | |
| 32 | All forwarding SS | |
| 33 | Call forwarding unconditional | |
| 40 | All conditional forwarding SS | |
| 41 | Call forwarding on mobile subscriber busy | |
| 42 | Call forwarding on no reply | |
| 43 | Call forwarding on mobile subscriber not reachable | |
| 144 | All barring SS | |
| 145 | Barring of outgoing calls | |
| 146 | Barring of all outgoing calls | |
| 147 | Barring of outgoing international calls | |
| 148 | Barring of outgoing international calls expect those directed to home PLMN | |
| 153 | Barring of incoming calls | |
| 154 | Barring of all incoming calls | |
| 155 | Barring of incoming calls when roaming outside home PLMN country | |
| Notification pertaining to the call (refer rec. 24.008 - § 10.5.4.20) | | |
| 48 | User suspended | |
| 49 | User resumed | |
| 50 | Bearer change | |
| Alerting patterns (refer rec. 24.008 - § 10.5.4.26) | | |
| 80 | Alerting pattern level 0 | |
| 81 | Alerting pattern level 1 | |
| 82 | Alerting pattern level 2 | |
| 84 | Alerting pattern category 1 | |
| 85 | Alerting pattern category 2 | |

| <Notification> | Description |
|----------------|-----------------------------|
| 86 | Alerting pattern category 3 |
| 87 | Alerting pattern category 4 |
| 88 | Alerting pattern category 5 |

Clarification

This command uses information available at APPI interface (application i/f). AT parser does not interface directly with protocol stack so it does not have immediate access to L3 messages, this means that <state> does not match L3 messages exactly as they are defined in 24.008 recommendation.

- SIM toolkit- SET UP CALL

Values 30..33 for <state> are used when a SET UP CALL proactive command has been received from the SAT. This call is initiated internally in the ME by STK.

*PSCSCS notification will be broadcasted as URC: the MO call has been initiated by STK, no AT channel is associated to the call.

Examples:

MO speech alerting at distant and initiated on line 1

*PSCSCS: 1, 4, 1,, 1,, ,

MO speech call connected to "11111111" and active on line 1

*PSCSCS: 1, 5, 1, "1111111", 129, 1,, ,

MT data call connected to "123456" and active on line 1, BC list = A28881211563A6

*PSCSCS: 8, 14, 1, "123456", 129, 1,, , "A28881211563A6"

8.7.2 +CNAP Command: Calling Name Presentation

| Description | Command | Possible Response(s) |
|----------------------|-----------|---------------------------------|
| Control +CNAP URC | +CNAP=<n> | |
| Get status of CNAP | +CNAP? | +CLIR: <n>, <m> |
| Get supported values | +CNAP=? | +CNAP: (list of supported <n>s) |

Parameters

| <n> | Description |
|-----|--|
| 0 | +CNAP notification is disabled |
| 1 | Enabled unsolicited result code: +CNAP: <name>, <validity> |

| <m> | Description |
|-----|---|
| 0 | Network does not provide the CNAP service |
| 1 | Network provides the CNAP service |
| 2 | Unknown (e.g. no network, etc.) |

| <validity> | Description |
|------------|------------------------------|
| 0 | Name presentation allowed |
| 1 | Presentation restricted |
| 2 | Name unavailable |
| 3 | Name presentation restricted |

Clarification

CNAP (Calling Name Presentation) is a supplementary service provided by the network. +CNAP command enables or disables the presentation of the name provided by the network.

8.7.3 *PSFSNT Field strength notification

| Description | Command | Possible Response(s) |
|--------------------------|----------------|----------------------|
| Select notification mode | *PSFSNT=<mode> | +CME ERROR: <err> |
| Get the current mode | *PSFSNT? | PSFSNT : <mode> |

Description

This command allows presentation of field strength notification.

Set command enable (or disable) the presentation of *PSFS each time field strength increase or decrease of 5 dBm.

| Description | Result code |
|-----------------------------|--|
| Field strength notification | *PSFS: <Field strength> [,<UMTS Field Strength>] |

Parameters

| <mode> | Description |
|--------|--------------------------------------|
| 0 | Disable presentation of notification |
| 1 | Enable presentation of notification |

| <field strength> | Description |
|------------------|---|
| 0 | GSM RX level is less than -110 dBm |
| 1..62 | GSM RX level is less than -109..-48 dBm |
| 63 | GSM RX level is greater than -48 dBm |
| 255 | GSM RX level is unavailable |

| <UMTS field strength> | Description |
|-----------------------|--------------------------------------|
| 0 | UMTS RSCP is less than -116 dBm |
| 1..90 | UMTS RSCP is less than -115..-25 dBm |
| 91 | UMTS RSCP is less than -25 dBm |
| 255 | UMTS RSCP is unavailable |

Clarification

The values defined are not the same as for +CSQ command.

8.7.4 *PSCSSC Call successful control

| Description | Command | Possible Response(s) |
|------------------|----------------|----------------------|
| Set mode | *PSCSSC=<mode> | +CME ERROR: <err> |
| Get current mode | *PSCSSC? | *PSCSSC : <mode> |

Description

This command controls the emission of the result code for MO speech successful set-up.

If "Connected line identification presentation" supplementary service is activated (refer to +COLP), result code for ATD command will be sent to TE when call is connected to the called party (successful call set-up).

If "Connected line identification presentation" supplementary service is not activated (refer to +COLP), result code for ATD can be sent as soon as call set-up is started or after call is connected to the called party (after successful call set-up).

WISMO218 AT Command Manual

Set command allows selection of <mode> for MO speech call result code.
 If user set <mode>=1 when +COLP is also activated, ERROR will be returned.
 Mode will remains to 0.

Parameters

| <mode> | Description |
|----------------|---|
| 0 (Default) | OK is returned only when call is connected to the remote party |
| 1 | OK is returned when call setup is started .The user is not informed of call successful connection to remote party. If the call fails, NO_ANSWER or NO_CARRIER will be sent after the OK. |

8.7.5 *PSCCDN Call connection and disconnection notification

| Description | Command | Possible Response(s) |
|----------------------|----------------|---|
| Set mode | *PSCCDN=<mode> | |
| Get current mode | *PSCCDN? | *PSCCDN : <mode> |
| Get supported values | *PSCCDN =? | *PSCCDN: (list of supported <mode>s), (List of supported <status>s) |

Description

This command allows presentation of information about connection or disconnection of a CS call (either MT or MO). This URC allow TE to exactly know which call is being connected or disconnected (NO CARRIER urc is not sufficient to discriminate calls id)

Set command enables/disables the presentation of notification result code from ME to TE.

When <mode> = 1, *PSCALL result code is sent to TE on connection or disconnection of call <Call Id>

| Description | Result code |
|-------------------|---|
| Call notification | *PSCALL: <Call Id>,<Status> [,<Number>] |

Parameters

| <mode> | Description |
|--------|----------------------|
| 0 | Disable notification |
| 1 | Enable notification |

| <call id> | Description |
|------------------------|--|
| 0 | Waiting call (alerting, no call id assigned yet) |
| 1..7 | Speech call ID |
| > 8 | Data call id |

| <status> | Description |
|-----------------------|--------------------|
| 0 | Disconnected |
| 1 | Connected |

| <number> | Description |
|-----------------------|---------------------------------|
| String type | Phone number (when <status> =1) |

Clarification

Special case: to inform that current waiting call has been disconnected: *PSCALL: 0,0 is sent.

The +CLCC command can be used to get more information about a specific call.
