5. Pin Descriptions

NO.	Name	I/O	Description
1	OSC	I	Oscillator Input Pin A resistor is connected to this pin to determine the oscillation frequency
2	DI/O	I/O	Data Output Pin (N-Channel, Open-Drain) or Data Input pin This pin Outputs/Input serial data at the falling(rising) edge of the shift clock.
3	CLK	I	Clock Input Pin This pin reads serial data at the rising edge and outputs data at the falling edge.
4	STB	I	Serial Interface Strobe Pin The data input after the STB has fallen is processed as a command When this pin is "HIGH", CLK is ignored.
5,6	K1 to K2	I	Key Data Input Pins. The data sent to these pins are latched at the end of the display cycle. (Internal Pull-Low Resistor)
22,25,28	GND	-	Ground Pin

6.5 Output Pins: GR5, GR6 and SG12/GR7

7. Function Descriptions

7.1 Command

A command is the first byte (b0 to b7) inputted to A1628 via the DIN Pin after STB pin has changed from HIGH to LOW Stage. If for some reason the STB Pin is set to HIGH while data or commands are being transmitted, the serial communications is initialized, and the data/commands being transmitted are considered invalid.

7.1.1 Command 1: Display Mode Setting Commands

HT1628 provides 2 display mode settings as shown in the diagram below: As stated earlier a command is the first one byte (b0 to b7) transmitted to HT1628 via the DIN Pin when STB is LOW. However, for these commands, the bit 3 to bit 6 (b2 to b5) are ignored, bit 7 & bit 8 (b6 to b7) are given value of 0.

The Display Mode Setting Commands determine the number of segments and grids to be used (12 to 11 segments, 6 to 7 grids). A display command ON must be executed in order to resume display. If the same mode setting is selected, no command execution is take place, therefore, nothing happens.

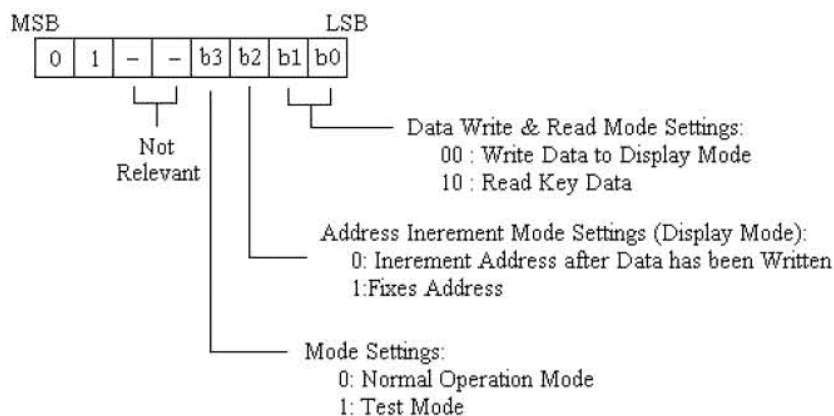

When Power is turned ON, the 7-grid, 11-segment modes is selected.

7.1.2 Command 2: Data Setting Commands

The Data Setting Commands executes the Data Write or Data Read Modes for HT1628. The data Setting Command, the bits 5 and 6 (b4,b5) are ignored, bit 7 (b6) is given the value of 1 while bit 8 (b7) is given the value of 0. Please refer to the diagram below.

When power is turned ON, bit 4 to bit 1 (b3 to b0) are given the value of 0.

7.1.3. HT1628 Keymatrix & Keyinput Data Storage Ram

HT1628 Key Matrix consists of 10 x 3 array as shown below:

K1.....K2		K1.....K2		
SG1/KS1	SG2/KS2	X	 READING SEQUENCE	
SG3/KS3	SG4/KS4	X		
SG5/KS5	SG6/KS6	X		
SG7/KS7	SG8/KS8	X		
SG9/KS9	SG10/KS10	X

7.2 Scanning And Display Timing

The key Scanning and Display Timing diagram is given below. One cycle of key scanning consists of 2 frames. The data of the are 10 x 3 matrix is stored in the RAM.

7.3 Serial Communication Format

The following diagram shows the HT1628 serial communication format. The DOUT Pin is an N-channel, open drain output pin; therefore, it is highly recommended that an external pull-up resistor (1 K Ohms to 10 K Ohms) must be connected to DOUT.

7.3.1 Reception (Data/Command Write)

7.3.2 Transmission (Data Read)

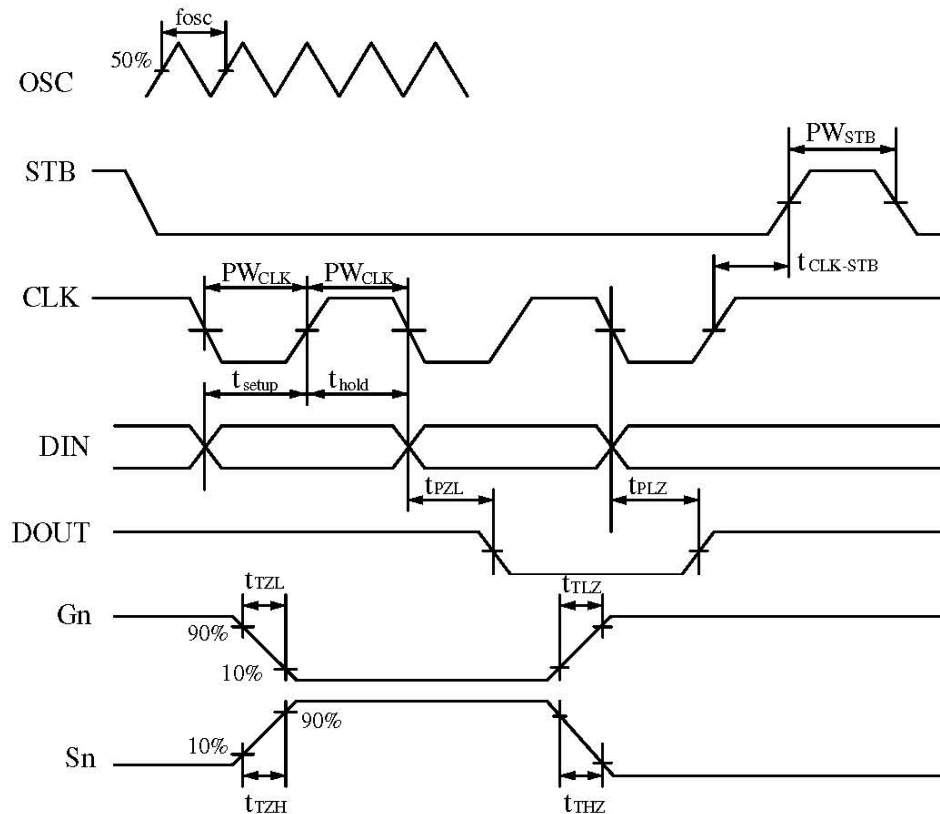

where: t_{wait} (waiting time) $\geq 1 \mu s$

It must be noted that when the data is read, the waiting time (t_{wait}) between the rising of the eighth clock that has set the command and the falling of the first clock that has read the data is greater or equal to $1 \mu s$.

7.4 Switching Characteristic Waveform

A1628 Switching Characteristics Waveform is given below.

where: PW_{CLK} (Clock Pulse Width) $\geq 400nS$

t_{setup} (Data Setup Time) $\geq 100nS$

$t_{CLK-STB}$ (Clock-Strobe Time) $\geq 1\mu s$

t_{TZh} (Rise Time) $\leq 1\mu s$

f_{osc} = Oscillation Frequency

$t_{TzL} < 1\mu s$

PW_{STB} (Strobe Pulse Width) $\geq 1\mu s$

t_{hold} (Data Hold Time) $\geq 100nS$

t_{THZ} (Fall Time) $\leq 10\mu s$

t_{PZL} (Propagation Delay Time) $\leq 100nS$

t_{PLZ} (Propagation Delay Time) $\leq 300\mu s$

$t_{TLZ} < 10\mu s$

Note: Test condition under

t_{THZ} (Pull low resistor=100k ohms, Loading capacitor =300pf)

t_{LZ} (Pull high resistor =100k ohms, Loading capacitor=300pf)

5. When IC power is applied for the first time, the contents of the Display RAM is not defined; thus, it

is strongly suggested that the contents of the Display RAM must be cleared during the initial setting.
