# Specification

General specifications apply for the temperature range 5°C to 40°C. Accuracy specifications apply for the temperature range 18°C to 28°C after 1 hour warm-up with no load and calibration at 23°C. Typical specifications are determined by design and are not guaranteed.

## MAIN OUTPUTS

Voltage/Current Ranges:	<b>QL355</b>	<b>QL564</b>
	0V to 35V/0.001A to 3A 0V to 35V/0.1mA to 500mA 0V to 15V/0.001A to 5A	0V to 56V/0.001A to 2A 0V to 56V/0.1mA to 500mA 0V to 25V/0.001A to 4A
Voltage Setting:	Resolution 1mV Accuracy $\pm (0.03\% + 5mV)$	
Current Setting:	Resolution 1mA; 0.1mA on 500mA range Accuracy $\pm (0.2\% + 5mA)$ ; $\pm (0.2\% + 0.5mA)$ on 500mA range.	
Output Mode:	Constant voltage or constant current with automatic cross-over. CI indicator lit in constant current mode.	
Output Switch:	Electronic, non isolating. Switch illuminated when Output on. Preset voltage and current limit displayed when Output off.	
Output Terminals:	Universal 4mm safety binding posts on 19mm (0.75") pitch for Output; screwless terminals for Sense. Duplicate rear panel Output and Sense screw terminals on P models.	
Transient Response:	<50 $\mu$ s to within 15mV of set level for a change in load current from full load to half load or vice versa.	
Voltage Programming Speed:	Maximum time required for output to settle within 1% of its total excursion (for resistive load). Excludes command processing time.	
	<b>QL355</b>	<b>QL564</b>
	<i>Full Load</i>	<i>No Load</i>
	<i>Full Load</i>	<i>No Load</i>
	<i>Up</i>	<i>Up</i>
	15V 5A	6ms
	35V 3A	20ms
	35V 500mA	200ms
	<i>Down</i>	<i>Down</i>
	15V 5A	6ms
	35V 3A	25ms
	35V 500mA	120ms
	25V/4A	10ms
	56V/2A	40ms
	56V/500mA	300ms
	25V/4A	10ms
	56V/2A	50ms
	56V/500mA	200ms
Ripple and Noise (20MHz bandwidth):	Normal mode voltage: <0.35mVrms and 2mVp-p Normal mode current: <0.2mArms; <20 $\mu$ Arms on 500mA range.	
Load Regulation:	For any load change, measured at the output terminals, using remote sense. Voltage <0.01% + 2mV. Current <0.01% + 250 $\mu$ A; <0.01% + 50 $\mu$ A on 500mA range. Add typically 2.5mV for a 0.5V drop in the positive output lead. Specification applies for sense lead resistance <0.5 $\Omega$ .	
Line Regulation:	Voltage <0.01% + 2mV for 10% line change. Current <0.01% + 250 $\mu$ A; <0.01% + 50 $\mu$ A on 500mA range.	
Temperature Coefficient:	Voltage: typically <(50ppm + 0.5mV)/°C Current: typically <(100ppm + 1mA)/°C; typically <(100ppm + 0.1mA)/°C on 500mA range.	
Output Protection:	Output will withstand forward voltages of up to 20V above rated output voltage. Reverse protection by diode clamp for currents up to 3A.	

---

Over-voltage Protection: (OVP)	Range 1V to 40V (QL355), 1V to 60V (QL564) Resolution 0.1V; accuracy $\pm (2\% + 0.5V)$ Response time typically 100 $\mu$ s
Over-current Protection: (OCP)	Range 0.01A to 5.5A (QL355), 0.01A to 4.4A (QL564) Resolution 0.01A; accuracy $\pm (0.2\% + 0.01A)$ Response time typically 35ms
Protection Functions:	Output trips off for OVP, OCP, over-temperature and Sense miswiring

## METER SPECIFICATIONS (Main Outputs)

Display Type:	5-digit (Volts), 4-digit (Amps), 14mm (0.56") LED.
Voltage (CI mode):	Resolution 10mV Accuracy $\pm (0.1\% \text{ of reading} + 10\text{mV})$
Current (CV mode):	Resolution 0.001A; 0.1mA on 500mA range Accuracy $\pm (0.2\% + 0.005A)$ ; $\pm (0.2\% + 0.5\text{mA})$ on 500mA range
V x A:	Resolution 0.01W; 0.001W on 500mA range Accuracy $\pm (0.3\% + 0.05W)$ ; $\pm (0.3\% + 0.005W)$ on 500mA range

## AUXILIARY OUTPUT (T models only)

Voltage Range:	1V to 6V
Voltage Setting:	Resolution: 10mV Accuracy: $\pm 0.5\% \pm 10\text{mV}$
Current Limit:	3A minimum
Output Switch:	Electronic, non isolating. Switch illuminated when Output on.
Output Terminals:	Universal 4mm safety binding posts on 19mm (0.75") pitch. Duplicate screwless terminals on rear panel.
Output Protection:	Output will withstand up to 16V forward voltage. Diode clamp reverse protection for currents up to 1A. Over-current trip.
Ripple & Noise: (20MHz bandwidth)	<2mV rms, 10mVp-p
Load & Line Regulation:	<1.0% for a 90% load change; 0.1% for a 10% line change.
Status Indication:	Current limit lamp. Current overload trip indication.
Meter Specifications: (use SET/VIEW button)	Voltage Meter: Resolution 10mV, accuracy $\pm 0.5\% \pm 10\text{mV}$ Current Meter: Resolution 10mA, accuracy $\pm 0.5\% \pm 10\text{mA}$
Voltage Programming Speed:	Maximum time required for output to settle within 1% of its total excursion (for resistive load). Excludes command processing time.  1V to 6V: 10ms, no load and full load 6V to 1V: 10ms, no load and full load

## KEYBOARD & ROTARY CONTROL

All functions, including the selection and set-up of the remote control interfaces, can be set from the keyboard. The rotary jog control can be used to adjust output voltage and current settings in a quasi-analogue mode.

## ALARM OUTPUT

Isolated rear-panel open-collector output signal. User can select output to be activated for either OVP, OCP, Overtemperature or Sense miswiring, or for any of those four faults.

---

## DIGITAL INTERFACES (P models only)

Full digital remote control facilities are available through the RS232, USB, LAN and GPIB interfaces.

### General

RS232:	Standard 9-pin D-connector. Variable Baud rate (600 to 19200).
GPIB:	Conforming with IEEE488.1 and IEEE488.2
USB:	Standard USB 2.0 hardware connection. Operates as a virtual COM port.
LAN:	Ethernet 100/10base-T hardware connection. Auto speed detect, auto MDIX. LXI V1.2, Class C compliant.
Remote Command Processing Time:	Typically <25ms between receiving the command terminator for a step voltage change at the instrument and the output voltage beginning to change.
Status Indication:	Remote mode and LAN status indicators

### Main Outputs

Voltage Setting:	16-bit; Resolution 1mV, accuracy $\pm (0.03\% + 5\text{mV})$
Current Setting:	16-bit; Resolution 0.1mA, accuracy $\pm (0.2\% + 5\text{mA})$ Resolution 0.01mA, Accuracy $\pm (0.2\% + 0.5\text{mA})$ on 500mA range.
Readback V & I	See meter specifications.

### Auxiliary Output (T models only)

Voltage Setting:	Resolution 10mV, accuracy $\pm 0.5\% \pm 10\text{mV}$
Current Setting:	Resolution 10mA, accuracy $\pm 0.5\% \pm 10\text{mA}$
Readback V & I	See meter specifications

## GENERAL

AC Input:	230V AC or 115V AC $\pm 10\%$ , 50/60Hz Installation Category II
Power Consumption:	Single output: 250VA max; Triple output: 500VA max.
Operating Range:	+5°C to +40°C, 20% to 80% RH
Storage Range:	-40°C to +70°C
Environmental:	Indoor use at altitudes up to 2000m, Pollution Degree 2.
Cooling:	Intelligent variable-speed fan. Over-temperature trip shuts down output if internal temperatures exceed predetermined thresholds.
Store/Recall:	Up to 50 set-ups each main output, 50 linked set-ups, and 10 auxiliary output settings can be saved and recalled via the keyboard or remote interfaces.
Safety:	Complies with EN61010-1
EMC:	Complies with EN61326
Size:	Single output: 140 x 160 x 290mm (WxHxD), excl. feet & terminals. Triple output: 280 x 160 x 290mm (WxHxD), excl. feet & terminals
Weight:	Single: 5.5kg; Triple: 10.5kg

This power supply is a Safety Class I instrument according to IEC classification and has been designed to meet the requirements of EN61010-1 (Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use). It is an Installation Category II instrument intended for operation from a normal single phase supply.

This instrument has been tested in accordance with EN61010-1 and has been supplied in a safe condition. This instruction manual contains some information and warnings which have to be followed by the user to ensure safe operation and to retain the instrument in a safe condition.

This instrument has been designed for indoor use in a Pollution Degree 2 environment in the temperature range 5°C to 40°C, 20% - 80% RH (non-condensing). It may occasionally be subjected to temperatures between +5°C and -10°C without degradation of its safety. Do not operate while condensation is present.

Use of this instrument in a manner not specified by these instructions may impair the safety protection provided. Do not operate the instrument outside its rated supply voltages or environmental range.

### **WARNING! THIS INSTRUMENT MUST BE EARTHED**

Any interruption of the mains earth conductor inside or outside the instrument will make the instrument dangerous. Intentional interruption is prohibited. The protective action must not be negated by the use of an extension cord without a protective conductor.

When the instrument is connected to its supply, terminals may be live and opening the covers or removal of parts (except those to which access can be gained by hand) is likely to expose live parts. The apparatus shall be disconnected from all voltage sources before it is opened for any adjustment, replacement, maintenance or repair.

Capacitors inside the power supply may still be charged even if the power supply has been disconnected from all voltage sources but will be safely discharged about 10 minutes after switching off power.

Any adjustment, maintenance and repair of the opened instrument under voltage shall be avoided as far as possible and, if inevitable, shall be carried out only by a skilled person who is aware of the hazard involved.

If the instrument is clearly defective, has been subject to mechanical damage, excessive moisture or chemical corrosion the safety protection may be impaired and the apparatus should be withdrawn from use and returned for checking and repair.

Make sure that only fuses with the required rated current and of the specified type are used for replacement. The use of makeshift fuses and the short-circuiting of fuse holders is prohibited.

Do not wet the instrument when cleaning it.

The following symbols are used on the instrument and in this manual:-

	Earth (ground) terminal.
	mains supply OFF.
	mains supply ON.
	alternating current (ac)
	direct current (dc)

## Service Handling Precautions

Service work or calibration should only be carried out by skilled engineers using high quality test equipment. If the user is in any doubt as to his competence to carry out the work, the instrument should be returned to the manufacturer or their agent overseas for the work to be carried out.

Please note the following points before commencing work.

The tracks on the printed circuit boards are very fine and may lift if subjected to excessive heat. Most of the integrated circuits are static sensitive and great care should be taken when handling them to avoid damage due to static discharge. Also, most devices on the Control board are surface mounted components with very fine leads on small pitches. These components must be removed and replaced with great care to avoid damage to the PCB. It is essential that only the proper tools and soldering equipment as recommended for surface mount components are used.

## Dismantling the instrument

### **WARNING!**

Disconnect the instrument from all voltage sources before it is opened for adjustment or repair. If any adjustment or repair of the opened instrument is inevitable it shall be carried out only by a skilled person who is aware of the hazards involved.

1. Remove the six screws retaining the top cover and lift clear.
2. To remove the pcbs, first improve access by unscrewing the front panel: remove the screw(s) securing the front panel bracket(s) to the spacer in the centre of the Power pcb(s) and remove the screws that fix the bottom edge of the front panel to the chassis. The front panel can be tipped forward to give access to the latching connectors connecting the Keyboard to the Power pcb; disconnect these, noting orientation.
3. To remove the Power and Control pcbs remove the two screws securing the Power pcb to the central fan bracket and the two screws fixing the Power pcb bracket to the rear panel. Unplug the two transformer connectors, the fan connector and any inter-pcb connections (Power to Power on a triple output supply, and/or Power to Interface on programmable versions) noting their positions carefully; a diagram is provided at the end of this manual showing how these connections are made. The Control pcb is plugged into the Power pcb and both can now be lifted clear together.
4. The Display/Keyboard pcb can be removed from the front moulding after pulling off the jog wheel and removing the fixing screws, two of which also secure the front panel bracket (four on the triple).
5. To remove the Interface pcb from the rear panel, undo the jackscrews of the GPIB and RS232 sockets and the self-tap screw in the chassis which retains the inner support bracket.
6. When re-assembling the instrument ensure that all fixings use the correct fasteners. Replace cut cable ties. Do not over tighten the display/keyboard fixing screws in the moulding. Check that the fan operates.

---

# Circuit Descriptions

The Power board contains the main power supply and the auxiliary supplies used internally, the output series regulator transistors, the microcontroller, display drivers and some control logic.

The Control board contains voltage and current control, ADC and DAC and some control logic.

The linear regulator is in series with the positive output but, because of the way in which the control circuit is referenced to the +ve output, it is convenient to consider the regulated output as the negative side.

To help reading the circuit diagrams the two connectors between the power and control pcbs join as follows. PJ14 to PJ18 and PJ20 to PJ19.

## Power Pcb

The main windings are connected either in series (for the high voltage range) or in parallel (for the low voltage range) by the range relays and an electronic tap change at approximately half range is used to reduce dissipation. Bridge rectifier BR1 feeds C4 the reservoir capacitor when tap change is low. When tap change is high, two of the diodes in BR1 are bypassed by SCR1 and SCR2. Voltages are listed below at nominal mains (230V).

<b>QL355</b>	<b>35V/3A</b>	<b>15V/5A</b>
Secondary – high tap, no-load	39.8VAC	19.9VAC
Secondary – high tap, full-load	37VAC	18.9VAC
C4 – high tap, no-load	51.5VDC	24.5VDC
C4 – high tap, full-load	44.7VDC	21.9VDC

<b>QL564</b>	<b>56V/2A</b>	<b>25V/4A</b>
Secondary – high tap, no-load	60VAC	30.1VAC
Secondary – high tap, full-load	56VAC	28.6VAC
C4 – high tap, no-load	79.5VDC	38.4VDC
C4 – high tap, full-load	69.5VDC	35.2VDC

A 30Vrms centre tapped winding and full wave rectification provide the auxiliary supplies. IC1 generates +10V and IC2 –5V. A 10.4Vrms winding and full wave rectification power the relays and fan and IC3 provides the +5V for the microcontroller, display and control logic.

Comparator IC6A provides the system reset signal and comparator IC6B provides the power fail signal to the microcontroller to store the instrument settings at power down.

The fan speed is regulated by a pulse width modulator in the microcontroller; if the heatsink exceeds a certain temperature measured by Q22, comparator IC50A switches the fan to full speed. If the heatsink temperature continues to rise IC50B will pull the over-temperature line low which will turn the output off.

Q15 and Q16 are the series regulator transistors; long-tailed pair Q17 and Q21 ensure current sharing. The +10V supply to emitter follower Q14 is via switch Q13 which is turned on after a delay to prevent output glitches when power is turned on.

Microcontroller IC9, which is factory programmed, writes the calibration values and instrument settings to non-volatile memory IC31, reads the keyboard, spin-wheel and status of the instrument via shift registers (4021s), reads the ADC, outputs data via shift registers (4094s) and display drivers IC32, IC33 and IC38, and writes to the DAC.

Jumpers are fitted to SEL1 to 7 to inform the microcontroller of the model type and to LK1 and LK2 to power the opto-couplers, see table below.

	SEL1	SEL2	SEL3	SEL4	SEL5	SEL6	SEL7	LK1	LK2
QL355				Yes					
QL355P				Yes					
QL355T output 1								Yes	Yes
QL355T output 2			Yes						
QL355TP output 1									
QL355TP output 2			Yes						
QL564						Yes			
QL564P						Yes			
QL564T output 1						Yes		Yes	Yes
QL564T output 2			Yes			Yes			
QL564TP output 1						Yes			
QL564TP output 2			Yes			Yes			

The transformer windings are in series for the high voltage range and in parallel for the low voltage range. D4, R14,C16 and D7,R15,C17 ensure the correct switching sequence of the range relays.

IC8C and IC8D form an oscillator to drive the buzzer.

TP2 carries a synchronising pulse output which makes it possible to view the DAC sample and hold outputs and the ADC input selector signals.

TP3 provides an output that toggles at each stage of the range change switching sequence.

## Control Pcb

IC2 is a 16-bit DAC and the reference to it is supplied via IC19B which allows fine adjustment for voltage and current settings. The DAC output is multiplexed into 7 sample and holds. IC14A is for the voltage control (VC); when the output is off IC42B grounds its input via VR2. IC28B drives the guard track (GV) round the VC sample and hold. An identical circuit is used for the current control (IC). IC20B is the voltage control error amplifier and IC21A is a differential amplifier. With the output at 35.0V VM will be -1.74V and VC will be 1.47V. Comparator IC26B is for over voltage protection (OVP). A relay selects local or remote voltage sensing; if the voltage between an output and its sense reaches  $2 \times V_{be}$  either Q19 or Q20 will turn on turning the output off.

IC20A is the current control error amplifier and IC22 is a differential amplifier with a gain of 10. R50 is used for the high current range and R51 is used for the 500mA range selected by IC23. Q3 shorts out R51 when the high current range is selected. If the current limit is set to 2.0A IC will be approximately 846mV. With a 2Amp load on the high range IM will be -1V. Over current protection (OCP) is realised in software. When the power supply is in constant current mode IC20A has control and comparator IC17B drives the CI line high.

---

IC37 is a 12-bit ADC; ADREF is adjusted for voltage and current measurements and is approximately 4V. IC27B has a gain of  $-2$ ; therefore if, for example, VM was  $-2$ V then the output of IC27B would be  $+4$ V. Offsets are trimmed by ADOFST. To achieve 13-bit resolution two measurements are taken with and without the 13<sup>th</sup> bit subtracted from the input selected by IC24C.

Any trip condition is latched by IC29 and IC30 and cleared by the microcontroller by pressing escape. IC18 is used for synchronising the switching of the outputs on triple units.

## Auxiliary Output

Each transformer has a 5Vrms winding and these are connected in series at the Auxiliary Power pcb. Regulator IC5 provides 5V. IC1 is a step down switching regulator (buck). Microcontroller IC11 sets the output voltage with a PWM signal via low pass filter IC4B. IC4D is the voltage error amplifier and IC4A signals if the loop comes out of regulation. Using an internal ADC IC11 measures the output voltage and current. The opto-couplers provide isolated communication with the processor on Output 1.

## Interface Pcb

The interface board allows the unit to communicate externally via USB, RS232, LAN or GPIB. IC2 is an ARM7 processor which is programmed in-circuit using the standard JTAG port accessed at PJ5. IC3 is the Ethernet transceiver. IC1 is the RS232 transceiver it has a charge pump to generate  $-5$ V. IC31, IC32 and IC33 form the GPIB interface. IC33 is a GPIB controller IC and performs all the GPIB hardware handshaking and status reporting. IC31 and IC32 are GPIB specific buffers.

## Servicing Note

If IC31 the memory IC located on the power pcb is replaced it is very likely the check sums do not match resulting in "error 999" being displayed. Pressing OK will get out of this condition and initialise the EEPROM. This will only work on a single power supply or on output 2 on a triple power supply. If IC31 has to be replaced on output 1 side of a triple power supply, output 1 and output 2 power boards will have to be interchanged, also links will have to be changed (see table under Power Pcb description) so that the power supply can initialise.

# Calibration

Refer to the General section for dismantling instructions and safety precautions. Normal calibration is done without opening the instrument.

Allow 10 minute warm-up before commencing calibration.

Refer to the User Manual for detailed operation of these power supplies.

## Equipment Required

A 5.5 digit multimeter with better than 0.02% accuracy on dc volts and better than 0.12% accuracy on dc current (to 5A); alternatively use a precision shunt for current measurement. An electronic load set to approximately 2.7A or a 1.8Ω 15W resistor.

## Calibration

To enter calibration press SHIFT, #, 99. If the instrument is a long way out of calibration or has been repaired, the default calibration values should be loaded first by pressing SHIFT #, 91. Pressing ESCAPE at anytime will abort the calibration procedure and revert to the stored calibration values.

Having entered calibration mode, follow the table below. To increment to the next step press OK. The calibration **must** be done in sequence. At the end of calibration press OK to store the calibration. The instrument automatically sets the range and settings at each step.

Use the spin-wheel to adjust calibration; holding down the JOG SET OFF key will give x100 increments to speed up calibration. Pressing SHIFT will show the calibration value.

On triple units calibrate both output 1 and output 2.

There are two internal adjustments which are factory set and will normally only require adjustment if a component has been changed in the associated area. If this is so proceed as follows. VR1 and VR2 are both located near the top of the control pcb. They are accessible from both sides of the board. Turn them both fully clockwise as viewed from the component side, fully anti-clockwise as viewed from the solderside. Adjustment is done with the output set to off. Connect an ammeter across the output terminals and adjust VR1 for +1mA. Remove ammeter and connect voltmeter and adjust for VR2 –10mV. (minus or negative 10mV).

Calibration steps 17 to 22 on output 1 are for the Auxiliary output.

## PCB ASSEMBLY – POWER – QL355

Part No.	Description	Position
20073-9801	SCREW No.4x1/4in. Plastite	HEATSINKS
20613-0026	SIL-PAD 900S 100MM X 25MM	FOR HS1, HS2
20670-0366	HEATSINK LS01000 100MM PLAIN	SK1-2
20670-0367	CLIP 1 FOR TO220/TO247 H/S	FOR IC1-3,Q22,SCR1-2,BR1,Q15,Q16
22240-0150	RELAY 12V DPDT 8A	RL1-2
22312-0242	FUSE CLIPS PCB MTG	FS1
22315-0310	FUSE 10A ANTISURGE(T) HBC UL	FS1
22315-0451	FUSE 750mAT SUBMIN PCB MNT UL	FS4 ,FS6
22315-0452	FUSE 1.0AT SUBMIN PCB MTG UL	FS5
22573-0041	HEADER 2WAY STR SIL STD/GOLD	LK1-3, TP1, TP5, TP2-4 (1 PIN EACH)
22573-0071	HEADER 5 WAY STR SIL STD	PJ8
22573-0150	HEADER 20 WAY STR LATCHING	PJ10-11
22573-0225	HEADER 5 WAY STR F/LOCK .156	PJ1
22573-0226	HEADER 6 WAY STR F/LOCK .156	PJ2
22573-0247	HEADER 2 WAY STR .1P F/LOCK	PJ6 (Rear Mount), PJ7 (REAR MOUNTED), PJ9
22573-0251	HEADER 6 WAY STR .1P F/LOCK	PJ5/PJ13 (R/MOUNTED)
22573-0262	HEADER 2 WAY RT ANG F/LOCK .1P	PJ4
22573-0410	HEADER 10W (2x5) BOXED	PJ15 (REVERSE MOUNTED)
22575-0038	HEADER 6 WAY STR SIL STD	PJ3
22575-0068	HEADER 14 WAY (2X7) STR SKEL	PJ12
22575-0103	HEADER 16 WAY (2X8) STR SKEL	PJ14 ,PJ20
23202-3100	RES 10K0F W60 MF 50PPM	R3 ,R96
23274-0104	RES 0R22J 3W WW	R26-27
23424-0443	CAP 10NZ 1KV CER D10 P5	C12-13
23557-0660	CAP 2200U 16V ELEC RE2 P5	C3
23557-0664	CAP 1000U 35V ELEC RE2 P5	C1-2
23557-0770	CAP 10000U 63V ELEC LP5 P10	C4-5
23620-0247	CAP 220NK 63V P/E P5	C16-17
23620-0257	CAP 2U2K 100V P/E P22.5	C9-10
23620-0263	CAP 220NK250VP/E 368 SER P15	C11 ,C23
23620-9007	CAP 10NK 100V P/E P5	C87
25115-0907	DIO 1N4002 B/R	D20-22
25210-0060	THYRISTOR 2N6507 TO-220	SCR1-2
25211-0303	RECTIFIER BRIDGE 8A 200V SIL	BR1

---
