Caution

1. This general specification can be changed, just for your reference only. Kyocera will release specification later exclusive for you. Please refer to it as the formal document of specification.
2. This LCD is supposed to be for general electric appliances such as audio, office automation, industrial applications, home appliances and game machines. Do not use the LCD as a display for a medical instrument that is required extremely high reliability and its failure and malfunction may affect human lives. In the case you did, Kyocera will not take responsibility for it.
3. Kyocera may scrap the tooling or stop supplying the LCD, after 2 year time frame from your latest purchase of the LCD.

1. Application

This data sheet defines the specification for a $(320 \times 3) \times 240$ dot, STN transmissive color dot matrix type Liquid Crystal Display with CFL backlight.

2. Construction and Outline

$(320 \times 3) \times 240$ dots, COB type LCD with CFL backlight.

Backlight system : Side-edge type CFL (1 tube).

Inverter : Option.
Recommended Inverter : PH-BLC08-K3 (HITACHI MEDIA ELECTRONICS)
or equivalent.

Polarizer : Non-Glare treatment.

Additional circuit : Bias voltage circuit, Randomizing circuit.

This drawing is showing conception only.

3. Mechanical Specifications

ITEM	SPECIFICATION	UNIT
Outline dimensions	154.6 (W) × 114.8 (H) × 8.5 (D)	mm
Effective viewing area	118.18 (W) × 89.38 (H)	mm
Dot number	(320×3) (W) × 240 (H)	Dots
Dot size	0.10 (W) × 0.34 (H)	mm
Dot pitch	0.12 (W) × 0.36 (H)	mm
Display color *1	White *2	—
Base color *1	Black *2	—
Weight	200	g

*1 Due to the characteristics of the LC material, the color vary with environmental temperature.

*2 Negative-type display

Display data "H" :R, G, B Dots ON : White

Display data "L" :R, G, B Dots OFF : Black

4. Absolute Maximum Ratings

4-1 Electrical absolute maximum ratings

ITEM	SYMBOL	MIN.	MAX.	UNIT

Storage humidity *3	H _{STO}	10	*4	%RH
Vibration	—	*5	*5	—
Shock	—	*6	*6	—

*1 LCD's display quality shall not be guaranteed at the temperature range of : below 0°C and upper 40°C.

*2 Temp. = -20°C < 48 Hr. , Temp = 60°C < 168 Hr.
Store LCD panel at normal temperature/humidity. Keep it free from vibration and shock. LCD panel that is kept at low or high temperature for a long time can be defective due to the other conditions, even if the temperature satisfies standard.

*3 Non-condensation.

*4 Temp. ≤ 40°C, 85% RH Max.
Temp. > 40°C, Absolute Humidity shall be less than 85%RH at 40°C.

Frame frequency *2	f _{FRM}		70	75	80	Hz
Current consumption for logic	IDD	*3	—	3.0	4.5	mA
Current consumption for LCD driving	IEE		—	7.5	11.3	mA
Power consumption	Pdisp		—	210	325	mW

*1 Maximum contrast ratio is obtained by adjusting the LCD supply voltage (Vop= VEE) for driving LCD.

*2 In consideration of display quality, it is recommended that frame frequency is set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD's performance and quality prior to finalizing the frequency values: Generally, as frame and clock frequencies become higher, current consumption will get bigger and display quality will be degraded.

*3 Display high frequency pattern, (see below).
VDD = 5.0V , Vop = VEE , f_{FRM} = 75 Hz , f_{cp} = 2.16MHz

	Black	x	$\theta = \phi = 0^\circ$	0.25	0.30	0.35		
		y		0.26	0.31	0.36		

Optimum contrast is obtained by adjusting the LCD driving voltage (Vop) while at the viewing angle of $\theta = \phi = 0^\circ$.

6-1 Contrast ratio is defined as follows:

$$CR = \frac{\text{Brightness all pixels "White"}}{\text{Brightness all pixels "Black"}}$$

6-2. Definition of Vop

6-3. Definition of response time

6-4. Definition of viewing angle

6-5. Measuring points

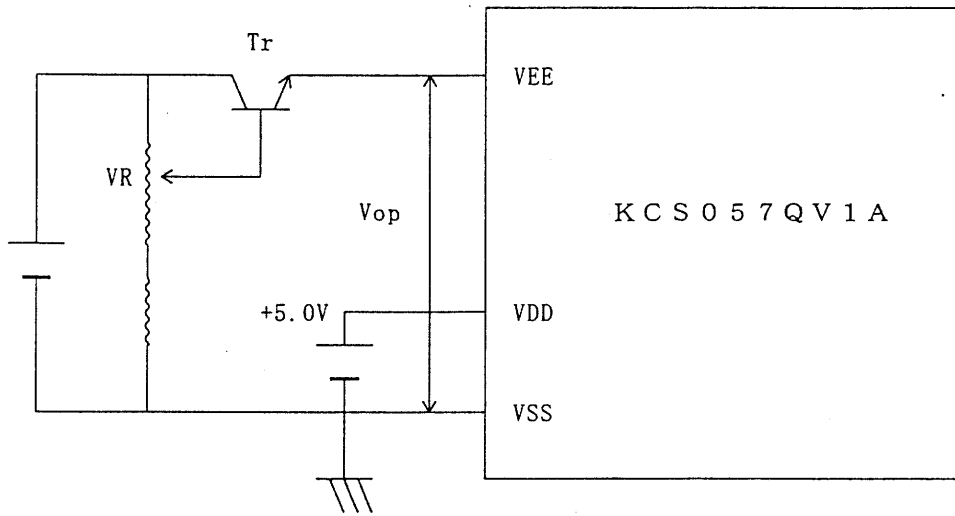

- 1) Rating is defined as the average brightness inside the viewing area.
- 2) 30 minutes after CFL is turned on. (Ambient Temp.=25°C)
- 3) The inverter should meet the eccentric conditions;
 - Sine, symmetric waveform without spike in positive and negative.
- 4) Measuring Inverter : PH-BLC-08-K3 (HITACHI MEDIA ELECTRONICS)

*2 The formula of condition

$$\textcircled{1} trCP + tfCP \leq tCCL - (tWCLH + tWCLL)$$

$$\textcircled{2} trCP, tfCP \leq 30 \text{ ns}$$

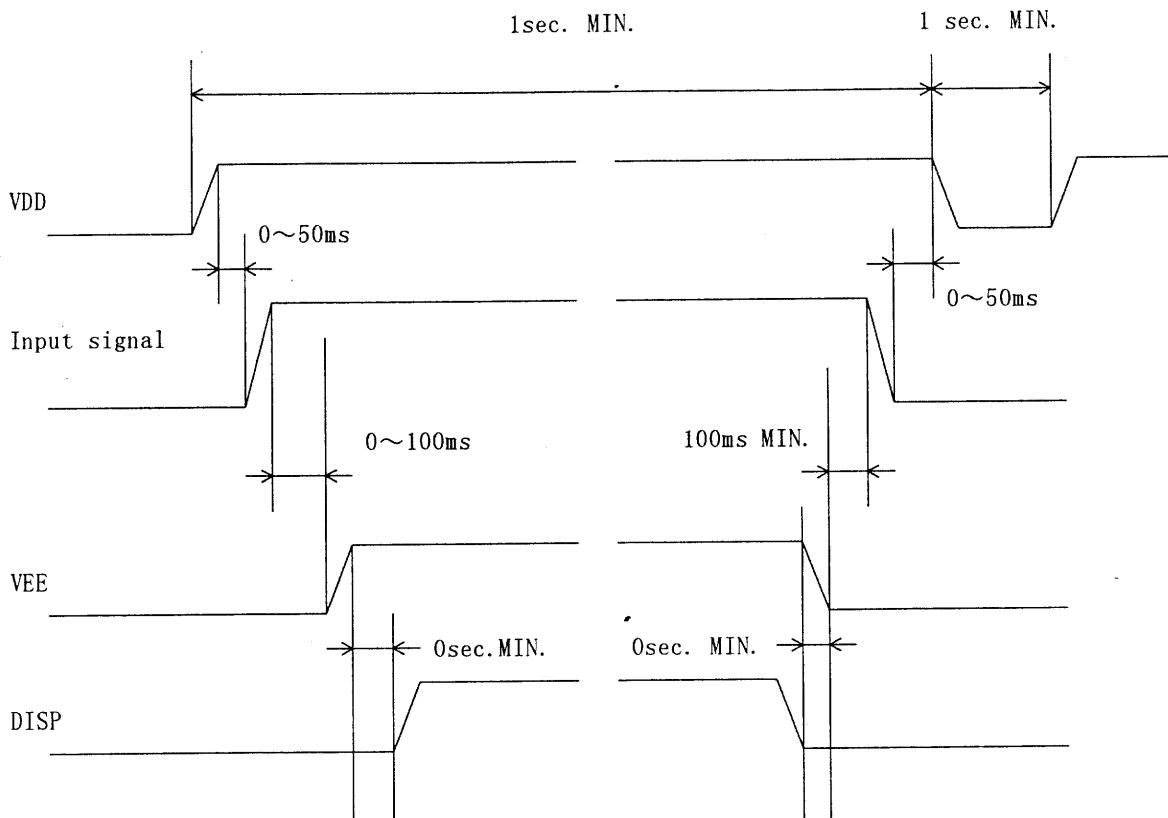

Please use on condition that ①, ② are filled.

*3 LOAD Cycle is const.

*4 tLC ≥ 0

1 2. Supply Voltage Sequence Condition

DO NOT apply DC voltage to the LCD panel. DC voltage induce irreversible electrochemical reactions and reduce LCD life. Always follow the power supply ON/OFF sequence of VDD first, input signal second, VEE third and finally DISP. This will prevent DC driving of the LCD or CMOS LSI latch up as shown below.

* The above sequence should be designed as to keep each normal figure on condition that liquid crystal module is loaded on your system.

* Control the input signal and VEE to the above ON - OFF timing when you switch ON/OFF the display during VDD and DISP are on.
and design the circuit as VEE's OFF level become GND level at the same time.

Operating frequency	F	30 kHz	—	100 kHz	—

- *1 The Non-load output voltage (VS) of the inverter should be designed to have some margin, because VS may increase due to the leak current which may be caused by wiring of CFL cables. (Reference value: 1035 Vrms MIN.)
- *2 Do not apply more than (6.0)mA discharge tube current. Because CFL maybe broken due to over current.
- *3 When the illuminance or quantity of light has decreased to 50 % of the initial value.
Average life time of CFL will be decreased when LCD is operating at lower and Higher temperature.

1 5. Warranty

15-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

15-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser, and within the limits specified. Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be Kyocera's responsibility.

16. Precautions for use

16-1. Installation of the LCD

1. Please ground either of the mounting (screw) holes located at each corner of an LCD module, in order to stabilize brightness and display quality.
2. The LCD shall be installed so that there is no pressure on the LSI chips.
3. The LCD shall be installed flat, without twisting or bending.
4. The display window size should be the same as the effective viewing area.
5. In case you use outside frame of effective viewing area as outward appearance of your product, unevenness of its outward appearance is out of guarantee.
6. Do not pull the CFL lead wires and do not bend the root of the wires. Housing should be designed to protect CFL lead wires from external stress.

16-2. Static Electricity

1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required. Operation should wear ground straps.

16-3. LCD Operation

1. The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
2. Vop must be adjusted to optimize viewing angle and contrast.
3. Operation of the LCD at temperature below the limit specified may cause image degradation and/or bubbles. It may also change the characteristics of the liquid crystal. This phenomenon may not recover. The LCD shall be operated within the temperature limits specified.

16-4. Storage

1. The LCD shall be stored within the temperature and humidity limits specified. Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. The LCD should be packaged to prevent damage.

16-5. Screen Surface

1. DO NOT store in a high humidity environment for extended periods. Image degradation, bubbles, and/or peeling off of polarizer may result.
2. The front polarizer is easily scratched or damaged. Prevent touching it with any hard material, and from being pushed or rubbed.
3. The LCD screen may be cleaned with a soft cloth or cotton pad. Methanol, or Isopropyl Alcohol may be used, but insure that all solvent residue is removed.
4. Water may cause damage or discoloration of the polarizer. Clean any condensation or moisture from any source immediately.
5. Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizers.

17. Reliability Data / Environmental Test

* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

* The LCD is tested in circumstances in which there is no condensation.

* The tested LCD is inspected after 24 hours of storage at room temperature and room humidity after each test is finished.

* The reliability test is not an out-going inspection.

* The result of the reliability test are for your reference purpose only. The reliability test is conducted only to examine the LCD's capability.
